Rules and Regulations

Rules and regulations are the official guidelines that interns must follow to maintain discipline, ensure participant safety, and uphold professional conduct during training at SVYASA Arogyadhama.

INTRODUCTION

Internship Overview

As part of the Master of Science (M.Sc.) programme in Yoga Therapy and Counselling, the internship was undertaken at **SVYASA Arogyadhama** from **3rd February 2026 to 17th February 2026**. This internship formed an integral part of the academic curriculum, aimed at providing clinical exposure, therapeutic understanding, and practical application of yoga therapy principles in a professional healthcare setting.

The primary objective of the internship was to bridge the gap between theoretical knowledge and clinical practice. Through structured training, supervised therapy sessions, and direct participant interaction, the internship offered valuable experiential learning in the field of integrated yoga therapy.

ABOUT AROGYADHAMA

Meaning and Concept

The term *Arogyadhama* means “Abode of Health.” It is a Yoga Research Health Home dedicated to promoting holistic well-being through the integrated application of yogic science and modern medical knowledge. The institution functions with the vision of fostering physical, mental, emotional, and spiritual harmony.

Location and Environment

Arogyadhama is situated in a peaceful and natural environment near Bengaluru, providing an ideal atmosphere for healing and self-transformation. The serene surroundings support relaxation, introspection, and recovery, which are essential components of yogic healing.

Vision and Mission

The vision of Arogyadhama aligns with the broader philosophy of SVYASA, which emphasizes the harmonious synthesis of personal development and societal contribution. The centre works toward:

- Prevention and treatment of diseases through yoga-based interventions
- Long-term rehabilitation and promotion of positive health
- Enhancement of quality of life through holistic living

Integrated Approach to Yoga Therapy

Arogyadhama follows an integrated and research-based approach to yoga therapy. The treatment model is designed to address the individual at multiple levels — physical (Annamaya Kosha), pranic (Pranamaya Kosha), mental (Manomaya Kosha), intellectual (Vijnanamaya Kosha), and spiritual (Anandamaya Kosha).

The therapeutic programmes include:

- ❖ Asanas (yogic postures)
- ❖ Pranayama (breathing techniques)
- ❖ Kriyas (cleansing practices)
- ❖ Meditation and relaxation techniques
- ❖ Devotional sessions and chanting
- ❖ Counselling and lifestyle guidance

The core therapeutic principle revolves around the threefold maxim of yoga:

- ✓ Relax the body
- ✓ Slow down the breath
- ✓ Calm the mind

This systematic process helps in managing psychosomatic disorders and improving overall health.

Medical and Scientific Support

Arogyadhama integrates modern medical care with traditional yogic practices. Participants undergo proper medical evaluation, and therapy modules are customized according to individual conditions. Resident doctors and trained yoga therapists supervise all sessions, ensuring safety and effectiveness.

Research conducted over the years supports the therapeutic benefits of yoga in managing stress-related disorders, lifestyle diseases, musculoskeletal problems, respiratory conditions, and chronic ailments. This scientific validation strengthens the credibility of yoga therapy as a complementary and integrative system of healthcare.

Internship Learning Experience

During the internship period, exposure was provided to various therapy sections through structured section allotment. Interns observed participant assessments, assisted in therapy sessions, and participated in academic discussions. The daily schedule included early morning practices, disease-specific modules, lectures, and interactive sessions.

The internship enhanced clinical competence, therapeutic skills, professional discipline, and compassionate participant interaction. It provided a deeper understanding of holistic healing and strengthened confidence in applying yoga therapy principles in real-world healthcare settings.

Internship Day-1 Schedule

Day 1 – 3rd February 2026 (Tuesday)

On the first day of the internship at SVYASA Arogyadhama, all team members completed the onboarding formalities, paid the required internship fees, and settled into their designated accommodations. The team assembled for lunch **at 1:00 PM**, where a wholesome sattvic meal was served, including vegetables, chapatis, rotis, buttermilk, and other nutritious preparations.

After lunch, we met our assigned coordinator, **Sonu Mourya Sir**, who briefed us about the internship structure and detailed training schedule. He allotted section-wise postings for all interns; as per the schedule, **Sunita Ma'am and I** were assigned to the **G-Section** starting from 4th February 2026, which marked our first clinical posting.

In the evening, from **6:40 PM to 7:40 PM**, an introductory academic session was conducted on **Trataka, CM (Cyclic Meditation)**, and **IAYT (Integrated Approach of Yoga Therapy)** by Karibasappa Sir. The session provided foundational insights into therapeutic yogic practices and their clinical relevance. The day concluded with participation in the evening bhajan session, creating a calm, reflective, and spiritually enriching beginning to the internship experience.

An introductory session on all Śatkriyās was conducted by **Karibasappa Sir**.

Trāṭaka

Trāṭaka is a classical yogic cleansing and concentration practice (Shatkarma) that involves steady gazing. It is mainly used to improve **concentration, mental clarity, eye health, and inner awareness**, and also prepares the mind for meditation by reducing mental fluctuations.

Benefits of Trāṭaka

- Improves concentration and memory
- Enhances eye strength and visual coordination
- Reduces stress, anxiety, and mental restlessness
- Prepares the mind for deeper meditation

Trāṭaka – Precautions and Contraindications

Precautions:

- Practice Trāṭaka in a calm, well-ventilated, and dimly lit room.
- Gazing should be gentle; avoid straining or forcing the eyes.
- Keep the candle flame steady and practice for a short duration initially.

Contraindications:

- ✓ Should be avoided in conditions such as severe eye disorders, glaucoma, cataract, or recent eye surgery.
- ✓ Not recommended during acute headache, migraine, or eye infections.

Integrated Approach of Yoga Therapy (IAYT)

Introduction

The Integrated Approach of Yoga Therapy (IAYT) is a holistic and evidence-based therapeutic model developed by S-VYASA University. It is designed to manage and treat psychosomatic disorders by restoring harmony between the body and mind. The approach is rooted in traditional yogic wisdom and supported by modern scientific research.

IAYT is widely implemented at SVYASA Arogyadhama, where it is used to address conditions such as anxiety, diabetes, chronic pain, and other lifestyle-related disorders.

IAYT is particularly effective in managing stress-related and psychosomatic disorders, including:

- ✓ Hypertension
- ✓ Bronchial asthma
- ✓ Diabetes
- ✓ Cancer
- ✓ Chronic pain conditions

Jala Neti

Jala Neti is a yogic nasal cleansing practice under *Shatkarma* that involves passing lukewarm saline water through the nasal passages. It helps in cleansing the nasal cavity, improving breathing, and maintaining the health of the respiratory system.

Benefits:

- ✓ Cleanses nasal passages and sinuses
- ✓ Relieves sinusitis, nasal congestion, and allergies

- ✓ Improves breathing and mental clarity

Precautions & Contraindications:

Should be practiced gently and avoided during acute sinus infection, severe cold, nasal bleeding, or after nasal surgery.

Sutra Neti

Sutra Neti is an advanced nasal cleansing practice in which a soft rubber catheter or cotton thread is gently passed through the nostril and brought out through the mouth. It is mainly practiced to remove deep-seated mucus and blockages in the nasal passages.

Benefits:

- ✓ Clears chronic nasal blockage
- ✓ Helpful in sinusitis, migraine, and respiratory disorders
- ✓ Improves nasal sensitivity and airflow

Precautions & Contraindications:

Should be practiced only under trained supervision and avoided in cases of nasal injury, bleeding disorders, severe sinus infection, or during pregnancy.

LSP – Laghu Śāṅkha Prakṣāḷana

Laghu Śāṅkha Prakṣāḷana (LSP) is a mild yogic cleansing practice (Shatkarma) aimed at **purifying the gastrointestinal tract**, especially the small intestine. Unlike the full Śāṅkha Prakṣāḷana, LSP is gentle and can be practiced more frequently under guidance. It helps in improving digestion, metabolism, and overall gut health.

Benefits

- ✓ Improves digestion and relieves constipation
- ✓ Helps in detoxification of the digestive system
- ✓ Useful in managing acidity, bloating, and indigestion
- ✓ Supports metabolic balance and gut health

Precautions

- ✓ Should be practiced only under the guidance of a trained yoga therapist.
- ✓ Avoid excessive intake of saline water.
- ✓ Adequate rest should be taken after the practice.

Contraindications

- ✓ Not recommended for individuals with ulcers, hernia, appendicitis, or severe gastrointestinal disorders.
- ✓ Should be avoided during pregnancy, menstruation, and acute illness.

Vamana Dhauti

Vamana Dhauti (also called *Kunjali Kriya*) is a yogic cleansing practice under **Shatkarma**, mainly performed to purify the stomach. In this practice, lukewarm saline water is

Benefits

- ## Contraindications

- ## Introduction to Cyclic Meditation (CM)

- 

[illegible]

Day 2 – 4th February 2026 (Wednesday)

Time: 5:20AM to 6:00AM

The second day of the internship commenced with **Omkāra chanting**, followed by the recitation of **Bhadram Karṇebhiḥ** and **Prātaḥ Smarāmi** shlokas, and concluded with **Om Meditation**. These practices helped cultivate mental purity, positivity, and inner awareness, preparing the mind and body for the day's therapeutic activities.

ॐकार (Omkāra)

ॐ

Meaning:

Om is the primordial sound symbolizing universal consciousness, peace, and harmony.

भद्रं कर्णेभिः (Bhadram Karṇebhiḥ)

ॐ भद्रं कर्णेभिः शृणुयाम देवाः ।
भद्रं पश्येमाक्षभिर्यजत्राः ।
स्थिरैरङ्गैस्तुष्टुवांसस्तनूभिः ।
व्यशेम देवहितं यदायुः ॥
ॐ शान्तिः शान्तिः शान्तिः ॥

Meaning:

May we hear what is auspicious, may we see what is noble, and may we live a healthy and purposeful life in the service of higher good. May peace prevail at all levels.

प्रातः स्मरामि (Prātaḥ Smarāmi)

प्रातः स्मरामि हृदि संस्फुरदात्मतत्त्वं
सच्चित्सुखं परमहंसगतिं तुरीयम् ।
यत्स्वप्नजागरसुषुप्तिमवैति नित्यं
तद्ब्रह्म निष्कलमहं न च भूतसङ्घः ॥

Meaning:

At dawn, I meditate upon the Supreme Reality shining in the heart, which is pure existence, consciousness, and bliss, beyond the states of waking, dream, and deep sleep.

ॐ ध्यान (Om Meditation)

ॐ शान्तिः शान्तिः शान्तिः ॥

Meaning:

Invocation of peace at the physical, mental, and spiritual levels.

OMKĀRA PRACTICE WITH PREPARATORY PRĀṆĀYĀMA**Introduction**

Omkāra is considered the primordial sound and the foundation of all yogic practices. In the yogic tradition, Om represents the universal consciousness and serves as a powerful tool for mental purification, concentration, and spiritual elevation. At SVYASA Arogyadhama, Omkāra practice is systematically incorporated into daily therapeutic and meditative routines as part of the **Integrated Approach of Yoga Therapy (IAYT)**.

During the internship training, Omkāra practice was conducted **after the recitation of Prātaḥ Smarāmi śloka**, to facilitate internalization, mental calmness, and readiness for higher yogic practices. The practice integrates prāṇāyāma, visualization, and meditation, ensuring holistic benefits at physical, mental, and emotional levels.

**Posture and Initial Preparation**

The practice begins by sitting in a comfortable meditative posture such as **Vajrāsana** or **Sukhāsana**. The spine is maintained erect, shoulders relaxed, and the head aligned with the spine. Hands rest comfortably on the thighs. The eyes are gently closed, and the body is consciously relaxed. Awareness is brought to the natural flow of breath, creating a state of preparedness for the prāṇāyāma practices that follow.

Preparatory Prāṇāyāma Practices**1. Kapālabhāti Prāṇāyāma**

Kapālabhāti is practiced as the initial cleansing technique to stimulate the abdominal organs and purify the respiratory passages.

- The practice is performed in **slow, medium, and fast rounds**, depending on individual capacity.
- Emphasis is placed on forceful exhalation with passive inhalation.
- After completion of the rounds, the practitioner relaxes with **normal inhalation and exhalation**.
- This relaxation phase is followed by chanting **one Omkāra**, allowing the breath and mind to stabilize.

Therapeutic significance:

Kapālabhāti improves digestion, enhances lung capacity, removes lethargy, and prepares the mind for deeper concentration.

2. Abdominal Breathing

Abdominal breathing is practiced for **six rounds**.

- During inhalation, the abdomen gently expands.
- During exhalation, the abdomen contracts smoothly.
- The breath remains slow, rhythmic, and effortless.

Therapeutic significance:

This practice calms the nervous system, reduces stress, and improves awareness of diaphragmatic breathing.

3. Nāḍī Śodhana Prāṇāyāma

Nāḍī Śodhana Prāṇāyāma is practiced for **six rounds**.

- Alternate nostril breathing is performed in a relaxed and steady manner.
- Equal attention is given to inhalation and exhalation without breath retention.

Therapeutic significance:

Nāḍī Śodhana balances the autonomic nervous system, purifies energy channels, enhances emotional balance, and improves mental clarity.

4. Bhrāmarī Prāṇāyāma

Bhrāmarī Prāṇāyāma is practiced for **six rounds**.

- Inhalation is slow and deep.
- During exhalation, a gentle humming sound is produced.
- Awareness is maintained on the vibration felt in the head and facial region.

Therapeutic significance:

Bhrāmarī reduces anxiety, calms mental fluctuations, relieves stress, and prepares the mind for meditation.

After completing all prāṇāyāma practices, the practitioner remains still for a few moments, allowing the breath to return to its natural rhythm.

Omkāra Dhyāna (Meditation on Om)**External Observation of Omkāra**

The practitioner gently opens the eyes and begins observing the **Omkāra symbol** placed in front.

- Initially, attention is focused on the **mid-point of the Omkāra**.
- Awareness is then slowly shifted to the **upper point (Bindu)**.
- Finally, the entire Omkāra form is observed as a complete symbol.

This visual observation enhances concentration and reduces external distractions.

Internal Visualization

After external observation:

- The eyes are gently closed.
- The practitioner visualizes the complete Omkāra internally.
- The image is observed at the space **between the two eyebrows (Bhrūmadhya / Ājñā Chakra)**.

If the image is not clearly perceived initially:

- The eyes are gently opened.
- The Omkāra is observed again externally.
- The eyes are closed and internal visualization is continued.

This process is repeated participantly without strain or effort.

Subtle Awareness and Absorption

As the practice deepens:

- The practitioner begins to perceive the **rays, glow, and radiance** of the Omkāra.
- Awareness gradually becomes subtle and internalized.

- Mental fluctuations reduce, leading to a state of calm alertness.

The practice is continued for **a few minutes**, allowing the mind to merge with the symbol of Om.

Relaxation Phase

After visualization:

- The practitioner remains seated quietly.
- Breath flows naturally without control.
- Awareness rests in the calmness and stillness generated by the practice.

This phase allows integration of the physiological and psychological benefits of Omkāra meditation.

Concluding Śānti Mantra

The practice is concluded with the chanting of the peace mantra:

सर्वे जनाः सुखिनो भवन्तु ।
सर्वे सन्तु निरामयाः ।
सर्वे भद्राणि पश्यन्तु ।
मा कश्चिद् दुःखभाग्भवेत् ।
ॐ शान्तिः शान्तिः शान्तिः ॥

Meaning:

May all beings be happy, may all be free from illness, may all experience auspiciousness, and may none suffer. May peace prevail at all levels.

Conclusion

Omkāra practice combined with preparatory prāṇāyāma forms an essential component of yogic therapy at SVYASA Arogyadhama. The systematic progression from breath regulation to visualization and meditation facilitates deep relaxation, emotional balance, and heightened awareness. This practice plays a significant role in stress management, psychosomatic healing, and spiritual growth, making it a valuable therapeutic tool in yoga therapy training.

G-Section (Gastroenterology)

Date: 4th February 2026

Section: G-Section

Specialty: Gastroenterology

Place: SVYASA Arogyadhama

Introduction to Gastroenterology

Gastroenterology is the branch of medicine that deals with the health and functioning of the **digestive system**, including the esophagus, stomach, intestines, liver, pancreas, and gallbladder. Gastrointestinal disorders are often influenced by **stress, lifestyle habits, diet, and emotional imbalance**, making them highly psychosomatic in nature.

At SVYASA Arogyadhama, gastroenterological conditions are managed using the **Integrated Approach of Yoga Therapy (IAYT)**, which focuses on correcting digestive fire (Agni), improving gut motility, reducing stress, and restoring mind–body balance through asanas, prāṇāyāma, relaxation techniques, kriyas, and lifestyle modifications.

Common conditions addressed in this section include acidity, gastritis, irritable bowel syndrome (IBS), constipation, indigestion, and stress-related digestive disorders.

Daily Schedule and Activities

6:00 AM – 6:55 AM: Special Technique (Section-wise – G-Section)

The morning special technique session was designed to **activate the musculoskeletal system, stimulate digestive organs, and prepare the body and mind for therapeutic practices.**

1. Hand Stretching Exercises

Hand stretching exercises were performed to improve **circulation, flexibility, and neuromuscular coordination**. These movements helped release stiffness in the fingers, wrists, and forearms, which is especially beneficial for improving pranic flow and preparing the body for subsequent practices.

2. Forehead Stretching Exercises

Forehead stretching exercises were practiced to **relieve facial and mental tension**. Gentle movements around the forehead and facial muscles helped relax the mind, reduce stress, and improve mental alertness, which is essential for psychosomatic conditions related to digestion.

3. Upward Stretching Movements

Upward stretching movements were performed to **elongate the spine, improve posture, and enhance circulation**. These movements created a gentle stretch along the spinal column, stimulating the abdominal region and supporting digestive health.

4. Deep Relaxation Technique (DRT)

After completing the stretching practices, **Deep Relaxation Technique (DRT)** was conducted in a supine position to induce complete physical and mental relaxation.

- Relaxation awareness was guided **from the toes to the top of the head**.
- For the **lower body region** (toes, feet, legs), relaxation was guided with chanting of **Ākāra**, helping release tension from the lower limbs.
- For the **middle body region** (abdomen, chest, back), relaxation was guided with chanting of **Ūkāra**, promoting relaxation of internal organs and stabilizing breath.
- For the **upper body region** (neck, face, head), relaxation was guided with chanting of **Makāra**, calming mental activity and soothing the nervous system.

This systematic relaxation helped integrate the effects of the physical practices and prepared the participants for the day's activities.

5. Śānti Mantra

The session concluded with the chanting of the peace mantra:

सर्वे जनाः सुखिनो भवन्तु ।
सर्वे सन्तु निरामयाः ।
सर्वे भद्राणि पश्यन्तु ।
मा कश्चिद् दुःखभाग्भवेत् ।
ॐ शान्तिः शान्तिः शान्तिः ॥

This mantra invoked peace at the physical, mental, and spiritual levels.

7:00 AM – 8:00 AM: Maitri Milan

Maitri Milan was conducted as a **group spiritual session**, promoting emotional bonding and mental positivity. The session included:

- ✓ Bhajans
- ✓ Hanuman Chalisa
- ✓ Selected verses from the Bhagavad Gita

This session created a devotional atmosphere, reducing stress and fostering emotional balance, which is essential for digestive health.

8:00 AM – 9:00 AM: Breakfast

A **sattvic breakfast** was served, supporting digestion and aligning with yogic dietary principles followed at Arogyadhama.

9:00 AM – 9:50 AM: Parameters and Consultation

Date: 4th February 2026

Section: G-Section

Place: SVYASA Arogyadhama

Case Study: 1

Participant Profile

- ✓ Name: *****
- ✓ Age: 54 years
- ✓ Gender: Female
- ✓ Occupation: Homemaker
- ✓ Date of Admission: 20/01/2026
- ✓ Date of Discharge: 26/01/2026

Medical Diagnosis

- Gastritis
- Constipation
- Haemorrhoids
- Knee Arthralgia

Chief Complaints

- 🚩 Burning sensation and heartburn since 20 years
- 🚩 Belching and gas since 20 years
- 🚩 Hard stools and constipation since 10 years
- 🚩 Haemorrhoids with occasional bleeding since 10 years
- 🚩 Knee pain and calf muscle pain since 6 years
- 🚩 Left arm pain since 8 years

History of Present Illness

The participant is a 54-year-old female with long-standing gastrointestinal complaints predominantly related to gastritis and constipation, aggravated by spicy food intake and stress. She also reported musculoskeletal complaints including knee pain, calf muscle pain, and left arm pain. Constipation was associated with hard stools and occasional bleeding due to haemorrhoids. Symptoms were chronic, psychosomatic in nature, and lifestyle-related.

General Parameters Recorded

Vital Signs

Parameter	On Admission	On Discharge
Pulse Rate (beats/min)	78	86–88
Blood Pressure (mmHg)	110/70	120/70
Respiratory Rate (breaths/min)	18	17–20

As part of the parameters and consultation session, the participant's blood pressure and pulse rate were measured using a manual sphygmomanometer and stethoscope. This assessment was carried out to monitor cardiovascular status, evaluate autonomic balance, and track physiological changes during the yoga therapy program. Accurate recording of these vital signs helps in assessing the participant's response to integrated yoga therapy and ensures the safety and effectiveness of the prescribed practices.

Had the opportunity to take a photograph with **Yoga Therapist Vidya Lakshmi**, who was highly cooperative during clinical testing and provided us with valuable exposure to learning and assessing participant parameters

Anthropometric Data

Parameter	On Admission	On Discharge

Psychological Status

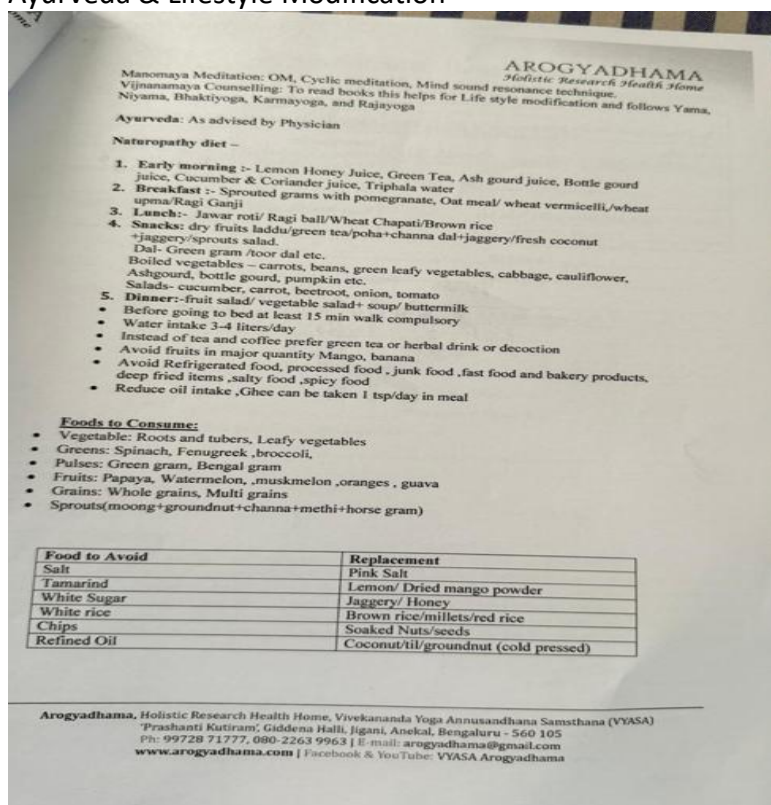

Parameter	Observation
Stress Level	Reduced
Emotional State	Calm
Mental Relaxation	Improved
Cooperation	Good

Consultation Observations

- ❖ Participant showed significant improvement in gastrointestinal symptoms with integrated yoga therapy.
- ❖ Stress and emotional factors contributing to gastritis and constipation were identified.
- ❖ Musculoskeletal pain reduced with physiotherapy and yoga practices.
- ❖ Participant was mentally calm, relaxed, and cooperative during therapy sessions.

Integrated Therapies Advised

- ✓ Yoga Therapy: Asanas, Pranayama, DRT, MSRT, CM
- ✓ Naturopathy & Diet Therapy: Sattvic, fiber-rich diet
- ✓ Physiotherapy: For knee and calf muscle pain
- ✓ Ayurveda & Lifestyle Modification

Dietary Advice (G-Section)

Recommended

- ✓ Warm water
- ✓ Fruits, vegetables, green gram, millets
- ✓ Jeera water, barley water
- ✓ Light, easily digestible meals

Avoid

- Spicy, fried, oily foods
- Refined sugar and refined oil
- Processed and junk foods

Consultation Outcome

- ✓ Gastrointestinal symptoms markedly reduced
- ✓ Bowel movements normalized
- ✓ Stress levels decreased
- ✓ Overall health and well-being improved

The participant was advised to continue home practice of yoga, pranayama, relaxation techniques, and dietary discipline after discharge.

CASE STUDY – OBESITY - 2

1. General Information

Parameter	Details
Name	*****
Age	53 Years
Gender	Female
Section	H
Date of Admission	21/01/2026
Duration of Stay	1 Week
Diagnosis	Obesity
Occupation	Service

2. Chief Complaints

- ✓ Overweight since 12 years
- ✓ Gradual increase in body weight
- ✓ No major acute complaints
- ✓ Stress-related eating tendencies
- ✓ Family history present

3. Past Medical History

- ✓ Not diabetic
 - ✓ Not hypertensive
 - ✓ Lipid profile done
- On medication:
- ✓ Tab Rosuvas 20 mg
 - ✓ Tab Levothyroxine

4. Investigations (As per PDF)

Investigation	Value
Cholesterol	649 mg/dl
Serum Ferritin	11 ng/ml

Investigation	Value
HbA1c	6.1%

5. PARAMETERS TABLE (Pre & Post)

A. Anthropometric Measurements

Parameter	On Admission	On Discharge
Height	156 cm	156 cm
Weight	89.7 kg	87.1 kg
BMI	36.9 kg/m ²	35.8 kg/m ²
Waist Circumference	116 cm	Reduced
Hip Circumference	122 cm	Reduced

B. Vital Parameters (Daily Monitoring Summary)

Parameter	Range Observed
Pulse Rate	81–88 bpm
Blood Pressure	120/80 – 130/80 mmHg
Respiratory Rate	14–16 cpm
Bhramari Time	9–10 sec

C. Symptom Progress (During Stay)

Symptom	Day 1	Day 7
Sleep	Sound	Sound
Bowel	Normal	Normal
Appetite	Normal	Normal
Energy	Improved	Improved

6. YOGIC THERAPY PLAN

Yoga Therapy (Section H)

Practice	Purpose
Loosening Practices	Improve mobility
Surya Namaskar	Calorie expenditure
Standing Asanas	Fat mobilization
Ardha Chakrasana	Trunk stretch
Trikonasana	Waist reduction
Bhujangasana	Abdominal toning
Shalabhasana	Core strengthening
Setubandhasana	Pelvic toning
Kapalabhati	Metabolic activation
Nadishuddhi	Autonomic balance
Bhramari	Stress reduction
MSRT	Emotional balance
Cyclic Meditation	Deep relaxation
DRT	Total relaxation

7. NATUROPATHY THERAPY TABLE

Day	Treatment 1	Treatment 2
Day 1	APEP	UHW + Friction
Day 2	APEP	Steam + Sauna
Day 3	---	NUGG
Day 4	APEP	Vibromassage (Whole Body)

Day	Treatment 1	Treatment 2
Day 5	APEP	UH + Friction
Day 6	APEP	NSS

8. Naturopathy Diet Chart (Summary)

Time	Diet
6:00 AM	Lemon Honey Water
8:00 AM	NBF / Khichadi
10:15 AM	Ash Gourd Juice
1:00 PM	Brown Rice / Veg Diet
5:00 PM	Veg Soup
7:30 PM	Fruits + RS

9. Counseling & Advice

- ✓ Continue Section H practices
- ✓ Follow naturopathy diet strictly
- ✓ Regular walking 30 minutes daily
- ✓ Avoid refined foods and sugar
- ✓ Reduce oil intake
- ✓ Practice Pranayama daily

10. Outcome at Discharge

Parameter	Improvement
Weight	Reduced by ~2.6 kg
BMI	Reduced
Waist circumference	Reduced
Energy levels	Improved
Sleep	Good
Bowel	Clear

Discharge Summary

Diagnosis:

Obesity Grade 2
Hypothyroidism

Chief Complaints:

C/O Weight gain since 5 years
K/C/O Hypothyroidism since 2008

History of Present Illness:

A 53-year-old female participant presented with the complaints of weight gain. She is also a known case of hypothyroidism and has been on medication for the same. She reported that her weight has increased after her thyroid medication dosage was increased in 2020. She also has history of gastritis occasionally, for which she is on medication, if required. During a routine check up on experiencing left arm pain, following which an ECG showed abnormalities. She was further advised to undergo 2D Echocardiography and ultrasonography, both of which were reported to be normal. The physician attributed her symptoms to excess body weight and advised injectable treatment for weight reduction. Seeking a natural approach to weight loss and overall health improvement, she visited Arogyadhama.

Integrated Therapies Given During the Stay:

Integrated Approach of Yoga Therapy (IAYT): Special technique for overall health and wellness, Pranayama, MSRT, CM, Bhajan session and Yogic counselling.

Diet:

Date	08:00am	10:15am	01:00pm	05:00pm	07:30pm
28/01/2026	Normal breakfast	Beetroot juice	Boiled Diet	Veg soup	Fruits and salad
29/01/2026	Khichdi	Cucumber juice	Boiled Diet	Veg soup	Fruits and salad
30/01/2026	Normal breakfast	Carrot juice	Boiled Diet	Veg soup	Fruits and salad
31/01/2026	Khichdi	Beetroot juice	Boiled Diet	Veg soup	Fruits and salad
1/02/2026	Normal breakfast	Carrot juice	Boiled Diet	Veg soup	Fruits and salad
2/02/2026	Normal breakfast	Cucumber juice	Boiled Diet	Veg soup	Fruits and salad
3/02/2026	Normal breakfast	Cucumber juice	Boiled Diet	Veg soup	Fruits and salad

11. Final Assessment

The participant showed measurable reduction in body weight and BMI within one week of integrated yoga and naturopathy intervention. Regular yogic practices combined with structured diet and naturopathy therapies contributed to improved metabolic profile and general well-being.

Conclusion

The parameters and consultation session demonstrated the effectiveness of the Integrated Approach of Yoga Therapy (IAYT) in managing chronic gastroenterological disorders. Regular monitoring, personalized therapy modules, dietary regulation, and mind-body practices resulted in holistic improvement in the participant's physical and mental health.

10:15 AM – 11:00 AM: Lecture (Kannada)

A lecture was delivered by **Karibasappa Sir**, conducted language-wise in Kannada. The session focused on **SVYASA kriyas**, explaining their therapeutic significance, indications, and application in managing psychosomatic and digestive disorders.

11:00 AM – 12:00 PM: Self-Study (Male Interns)

Male interns utilized this time for **self-study** by visiting the library and referring to:

- ✓ Yoga therapy theses
- ✓ Dissertations
- ✓ Yoga Itihasa
- ✓ Classical yogic texts

This session enhanced theoretical understanding and research orientation.

12:00 PM – 1:00 PM: Special Technique / PET (G-Section)

A second session of **special techniques or Physical Exercise Therapy (PET)** was conducted for G-Section participants, focusing on abdominal activation, digestion improvement, and relaxation.

1:00 PM – 2:00 PM: Lunch

A balanced **sattvic lunch** was provided, supporting digestive health and recovery.

2:00 PM – 2:30 PM: Rest

A short rest period was given to allow digestion and physical recovery.

2:30 PM – 3:10 PM: MSRT (Mind Sound Resonance Technique)

Mind Sound Resonance Technique (MSRT)

Introduction

Mind Sound Resonance Technique (MSRT) is a guided yogic relaxation practice that uses **sound, mantra, and awareness** to induce deep mental calmness and internal silence. The practice works on the principle that **sound vibrations resonate through the body and mind**, helping to release stress, balance emotions, and enhance inner awareness. MSRT is an integral component of the **Integrated Approach of Yoga Therapy (IAYT)**.

Procedure of MSRT

Step 1: Opening Prayer

The practice begins with a prayer for healing and well-being:

ॐ त्र्यम्बकं यजामहे सुगन्धिं पुष्टिवर्धनम् ।
उर्वारुकमिव बन्धनान् मृत्योर्मुक्षीय मामृतात् ॥
ॐ शान्तिः शान्तिः शान्तिः ॥

(Mrityunjaya Mantra)

This prayer invokes protection, nourishment, and freedom from suffering.

Step 2: A-U-M Chanting

a) Loud Chanting (Āhata Phase)

- ✚ Loud chanting of **A, U, M**, and **AUM** is done for **3 rounds**.
- ✚ Participants are instructed to **feel the resonance of sound throughout the body**, from head to toe.

b) Mental Chanting (Anāhata Phase)

- ✓ Chanting of **A, U, M**, and **AUM** is repeated **mentally for 3 rounds**.
- ✓ Awareness is maintained on the **subtle inner vibrations**, even without vocal sound.

Step 3: Mrityunjaya Mantra Chanting

a) Loud Chanting

The Mrityunjaya Mantra is chanted loudly for **3 rounds**:

ॐ त्र्यम्बकं यजामहे सुगन्धिं पुष्टिवर्धनम् ।
उर्वारुकमिव बन्धनात् मृत्योर्मुक्षीय मामृतात् ॥
ॐ शान्तिः शान्तिः शान्तिः ॥

Participants are guided to **feel the pattern of resonant waves spreading throughout the body**.

b) Mental Chanting (Anāhata)

- Mental chanting of the mantra (**MM, MM, MM**) is done for **3 rounds**.
- Resonance is felt internally at a deeper mental level.

Step 4: Anāhata AUM (9 Rounds)

- ✓ **AUM** is repeated mentally for **9 rounds**.
- ✓ Attention is placed on the **mind-level resonance**, experiencing vibrations spreading through the entire body.

Step 5: Ajapājapa AUM to Silence (9 Rounds)

- ❖ The natural flow of **AUM** is observed mentally without effort.
- ❖ The sound gradually **merges into silence**.
- ❖ Participants feel the resonance of OM rising and dissolving into stillness.

Step 6: Stay in Silence

Participants remain in **complete silence**, observing inner awareness without any sound or effort.

Step 7: Resolve

A **positive resolve (Sankalpa)** is taken mentally, reinforcing healing, calmness, and well-being.

Step 8: Closing Prayer (Śānti Mantra)

सर्वे भवन्तु सुखिनः ।
सर्वे सन्तु निरामयाः ।
सर्वे भद्राणि पश्यन्तु ।
मा कश्चिद् दुःखभाग्भवेत् ॥
ॐ शान्तिः शान्तिः शान्तिः ॥

Meaning:

May all be happy, may all be free from disease, may all see auspiciousness, and may none suffer.

Benefits of MSRT

- ✓ Deep mental relaxation
- ✓ Reduction of stress and anxiety
- ✓ Enhanced emotional stability
- ✓ Improved concentration and awareness
- ✓ Supportive in psychosomatic disorders

Conclusion

Mind Sound Resonance Technique systematically guides the practitioner from **external sound (Āhata)** to **inner silence (Anāhata)**. Through structured chanting, mental repetition, and silence, MSRT helps the mind settle into a state of **alert calmness and inner harmony**, making it a powerful therapeutic and meditative practice at SVYASA

3:20 PM – 4:00 PM: Prāṇāyāma and DRT

Prāṇāyāma Session

Introduction

Prāṇāyāma is the yogic practice of regulating the breath to influence the flow of prāṇa (vital energy) in the body. In yoga therapy, prāṇāyāma plays a crucial role in balancing the autonomic nervous system, improving organ function, reducing stress, and preparing the mind for relaxation and meditation. During the session, prāṇāyāma practices were performed in a **systematic sequence**, progressing from cleansing and activating techniques to calming and cooling practices, and concluding with deep relaxation.

1. Kapālabhāti Prāṇāyāma

Kapālabhāti was practiced as the initial cleansing technique.

- ✓ The practice involved **forceful and rhythmic exhalation**, with passive inhalation.
- ✓ Emphasis was placed on abdominal contraction during exhalation.
- ✓ The practice was performed slowly and mindfully according to individual capacity.

Therapeutic effect:

Kapālabhāti helps in cleansing the respiratory passages, stimulating abdominal organs, improving digestion, enhancing metabolic activity, and increasing alertness.

2. Abdominal Breathing

After Kapālabhāti, **abdominal breathing** was practiced.

- During **inhalation**, the abdomen gently bulged outward.
- During **exhalation**, the abdomen moved inward.
- Participants were instructed to **observe the natural movement of the stomach** with each breath.
- The breathing was slow, smooth, and effortless.

Therapeutic effect:

Abdominal breathing promotes parasympathetic dominance, reduces stress, calms the mind, and improves oxygenation.

3. Nāḍī Śuddhi (Nāḍī Śodhana) Prāṇāyāma

Nāḍī Śuddhi Prāṇāyāma was practiced to purify the energy channels.

- ✓ Alternate nostril breathing was performed in a relaxed manner.
- ✓ Equal duration of inhalation and exhalation was maintained.
- ✓ Breath awareness was emphasized without breath retention.

Therapeutic effect:

Nāḍī Śuddhi balances the sympathetic and parasympathetic nervous systems, improves emotional stability, and enhances mental clarity.

4. Bhrāmarī Prāṇāyāma

Bhrāmarī Prāṇāyāma was practiced next.

- ✓ Inhalation was slow and deep.
- ✓ During exhalation, a gentle **humming sound** was produced.
- ✓ Awareness was maintained on the vibrations felt in the head and chest region.

Therapeutic effect:

Bhrāmarī calms the nervous system, reduces anxiety, relieves mental tension, and promotes inner silence.

5. Cooling Prāṇāyāma

Cooling prāṇāyāma practices were performed to reduce heat in the body and calm the mind.

a) Śītalī Prāṇāyāma

- ✓ Inhalation was done through the rolled tongue.
- ✓ Exhalation was done through the nose.

b) Śītkārī Prāṇāyāma

- ✚ Inhalation was done through clenched teeth with a hissing sound.
- ✚ Exhalation was done through the nose.

c) Sadanta Prāṇāyāma

- ✓ Inhalation was performed gently through the teeth.
- ✓ Exhalation was slow and relaxed through the nose.

Therapeutic effect:

Cooling prāṇāyāma reduces body heat, soothes the nervous system, alleviates stress, and is beneficial for gastritis, acidity, and psychosomatic disorders.

6. Deep Relaxation Technique (DRT)

The prāṇāyāma session concluded with **Deep Relaxation Technique (DRT)**.

- ✓ Participants lay down in **Śavāsana**.
- ✓ Awareness was guided systematically from **toes to the top of the head**.
- ✓ Breath was observed naturally without control.
- ✓ A–U–M chanting was used to deepen relaxation of the lower, middle, and upper parts of the body.

Therapeutic effect:

DRT allows complete physical, mental, and emotional relaxation, helping the body absorb the benefits of prāṇāyāma practices.

4:00 PM – 5:00 PM: Special Technique

The evening special technique session focused on **improving spinal flexibility, abdominal strength, digestion, and relaxation**.

1. Tiryak Tadasana

Tiryak Tadasana was practiced to **stretch the lateral muscles of the body**, improve spinal mobility, and stimulate abdominal organs, thereby aiding digestion.

2. Trikonasana

Trikonasana was performed to enhance **lateral spinal flexibility**, massage abdominal organs, and improve circulation in the digestive region.

3. Ardha Chakrasana

Ardha Chakrasana helped in **opening the chest and abdominal region**, improving posture, and stimulating digestive fire (Agni).

4. Lying Asanas

Lying asanas were practiced to strengthen the core muscles and promote relaxation without strain, supporting gut health and spinal alignment.

5. Single Leg Raise (90°) and Both Leg Raise (90°)

- ✓ Single leg raise strengthened the lower abdominal muscles.
- ✓ Both leg raise enhanced core stability and improved digestive organ tone.

6. Lumbar Zig-Zag Movements

Lumbar zig-zag movements were practiced to **release lower back stiffness**, improve spinal flexibility, and reduce tension in the lumbar region.

7. Sethubandhasana

Sethubandhasana was performed to **stimulate abdominal organs, strengthen the back, and improve circulation**, contributing to better digestion and relaxation.

8. Deep Relaxation Technique (DRT)

The session concluded with **Deep Relaxation Technique**, allowing the body and mind to absorb the therapeutic effects of the practices. DRT helped reduce fatigue, calm the nervous system, and restore mental clarity.

5:00 PM – 6:00 PM: Evening Snacks

Light refreshments were provided.

6:00 PM – 6:30 PM: Bhajans

Evening bhajans were conducted, creating a peaceful and devotional environment.

6:40 PM – 7:40 PM: Trāṭaka and Cyclic Meditation

A guided session of **Trāṭaka and Cyclic Meditation (CM)** was conducted, helping improve concentration, emotional stability, and deep relaxation.

Tratakā:

Steps of Trāṭaka Practice

1. Preparation and Relaxation

Sit comfortably on a chair or on the floor with the spine erect. Relax the body and mind, and begin the practice by chanting **Omkāra** to create a calm and focused mental state.

2. Eye Movement Exercises

Gently perform eye movements to prepare the eyes:

- ✓ Move the eyes from **left to right**
- ✓ Move the eyes **up and down**
- ✓ Perform **eyeball rotations** slowly in both directions

3. **Palming and Gazing**

Close the eyes and rub the palms together to generate warmth. Gently place the palms over the closed eyes without applying pressure. Slowly remove the palms, open the eyes, and begin gazing steadily at the **Dīpa or Jyothi (candle flame)**.

4. **Position of the Candle**

The candle should be placed at a distance of approximately **five feet** from the practitioner and positioned at the **same height as the eyes** to ensure comfortable and steady gazing.

Benefits of Trāṭaka

- ✓ Improves concentration and memory
- ✓ Enhances eye strength and visual coordination
- ✓ Reduces stress, anxiety, and mental restlessness
- ✓ Prepares the mind for deeper meditation

Trāṭaka – Precautions and Contraindications

Precautions:

- 🚦 Practice Trāṭaka in a calm, well-ventilated, and dimly lit room.
- 🚦 Gazing should be gentle; avoid straining or forcing the eyes.
- 🚦 Keep the candle flame steady and practice for a short duration initially.

Contraindications:

- Should be avoided in conditions such as severe eye disorders, glaucoma, cataract, or recent eye surgery.
- Not recommended during acute headache, migraine, or eye infections

Cyclic Meditation (CM)

Is a guided yogic relaxation practice that involves **alternating phases of stimulation and relaxation**, helping to achieve deep physical, mental, and emotional rest. This technique is widely used at **SVYASA Arogyadhama** as part of the **Integrated Approach of Yoga Therapy (IAYT)** to reduce stress, enhance awareness, and balance the autonomic nervous system.

According to the practice followed, **Cyclic Meditation consists of three relaxation techniques:**

- ✓ IRT – Instant Relaxation Technique
- ✓ QRT – Quick Relaxation Technique
- ✓ DRT – Deep Relaxation Technique

1. Instant Relaxation Technique (IRT)

The practice begins with the participant **lying down on the mat in supine position**. One round of **Ākāra chanting** is performed to initiate relaxation.

- Awareness is brought to the **legs and hands**, and participants are instructed to **tighten the muscles gently while inhaling**.
- Tension is applied sequentially to **toes, knees, calf muscles, thighs, waist, arms, and palms**.
- After holding the tension for a few seconds, the muscles are **completely relaxed with exhalation**.

This immediate tightening and releasing of muscles helps to **quickly release physical stiffness and mental restlessness**. This phase is referred to as **IRT**.

2. Stimulating Postures (Dynamic Phase)

After IRT, participants **stand up** and perform gentle dynamic movements:

-  **Forward bending posture** is performed, ensuring the stretch is felt in the upper part of the body and legs.
-  The posture is maintained for a few seconds with awareness on pressure and stretch.
-  Participants then **bend backward**, applying gentle pressure and returning to the neutral position.
-  **Ākāra chanting** is done while returning to the standing position.

Next, **side bending movements** are practiced on both sides, applying pressure on one side of the body at a time.

This phase includes movements similar to **Ardha Chakrasana**, performed slowly and mindfully.

These movements provide **controlled stimulation**, activating muscles and internal organs before relaxation.

3. Quick Relaxation Technique (QRT)

After completing the stimulating postures, participants **lie down again on the mat**.

- Eyes are gently closed.
- Attention is brought to the **natural flow of breath**.
- Awareness is focused on the **abdominal movement**, where the abdomen rises like a mountain during inhalation and falls during exhalation.
 - The breath is observed calmly for a few rounds.

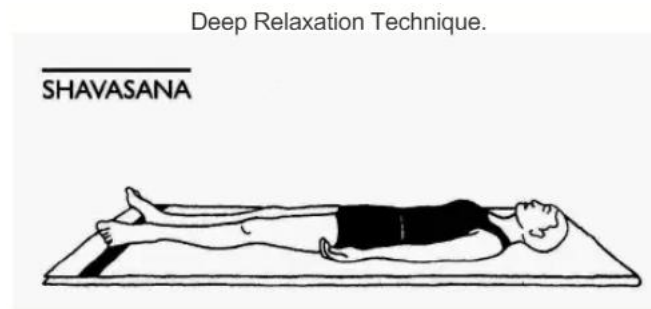

Participants are then guided to observe breathing by **placing the index finger near the nostrils**, noticing:

- ✓ Cool air while inhaling
- ✓ Warm air while exhaling

After this mindful observation of breath, **Makāra chanting** is performed, leading to mental calmness.

This phase is known as **QRT**.

4. Deep Relaxation Technique (DRT)

Practice

Lie down comfortably on your back in **Śavāsana**, keeping the legs slightly apart and arms relaxed away from the body. Close the eyes gently and allow the breath to flow naturally. Become aware of the body and consciously release all physical and mental tension.

Step 1: Relaxation of the Lower Part of the Body (Ākāra)

Bring your awareness to the **lower part of the body**.

- ✓ Focus on the **tips of the toes**, gently move them and relax.
- ✓ Feel relaxation spreading through the **soles of the feet and ankle joints**.
- ✓ Relax the **calf muscles** and gently pull up the kneecaps; release and relax.
- ✓ Shift awareness to the **thigh region** and feel the relaxation in the thigh muscles.
- ✓ Loosen the **buttock muscles and hip joints**, allowing them to relax completely.
- ✓ Bring awareness to the **pelvic region and waist** and relax totally.

Mentally affirm **R...E...L...A...X**.

To deepen relaxation in the lower part of the body, chant **Ākāra (A...A...A)** and feel the vibrations spreading through the legs, pelvis, and lower abdomen.

Step 2: Relaxation of the Middle Part of the Body (Ūkāra)

Slowly shift your awareness to the **middle part of the body**.

- Observe the **movement of the abdomen** for a few seconds and relax the abdominal muscles.
- Relax the **chest muscles** and feel the breath becoming smooth and effortless.
- Bring awareness to the **lower back**, relaxing the muscles around the spine.
- Gradually relax the **middle and upper back muscles**.
- Completely relax the **shoulder blades**.

Now shift attention to the **hands**:

- ✓ Sensitize and relax the **tips of the fingers** one by one.
- ✓ Relax the **palms**, loosen the **wrist joints**, and relax the forearms.
- ✓ Relax the **elbow joints, biceps, and triceps**.
- ✓ Allow the **shoulders** to drop and relax completely.

Bring awareness to the **neck region**, feel the relaxation around the neck muscles.

Slowly move the head **gently to the left and right**, then bring it back to the center.

Mentally affirm **R...E...L...A...X**.

To enhance relaxation of the middle part of the body, chant **Ūkāra (U...U...U)** and feel the vibrations spreading through the abdomen, chest, back, arms, and neck.

Step 3: Relaxation of the Upper Part of the Body (Makāra)

Now shift your awareness to the **upper part of the body**.

- ✓ Relax the cheeks and chin muscles.
- ✓ Feel relaxation in the lower and upper jaw, teeth, gums, and lips.
- ✓ Relax the soft and hard palate, throat, and vocal cords.
- ✓ Bring awareness to the nose, eyes, eyelids, eyebrows, and forehead, and relax them completely.
- ✓ Relax the temples, scalp, and the top of the head.

Allow the entire head region to become completely relaxed and still.

To deepen relaxation in the upper part of the body, chant **Makāra (M...M...M)** and feel the soothing vibrations in the face, throat, and head region.

Completion

Experience the **total relaxation of the entire body** from toes to head.

Remain in this state of deep rest and awareness for a few moments, observing the calmness and stillness within.

The practice may be concluded with a gentle **Omkāra chanting** followed by a **Śānti Mantra**, allowing the mind and body to return gradually to normal awareness.

Benefits of Cyclic Meditation

- ✓ Deep physical and mental relaxation
- ✓ Reduction of stress and anxiety
- ✓ Improved autonomic balance
- ✓ Enhanced awareness and concentration
- ✓ Supportive in psychosomatic and lifestyle disorders

Cyclic Meditation, as practiced at SVYASA, is a **scientifically designed yogic technique** that effectively integrates **movement, breath awareness, mantra, and relaxation**. The systematic alternation between stimulation and relaxation helps participants attain a state of **alert calmness**, making it an essential therapeutic practice in yoga therapy programs

7:50 PM – 8:30 PM: Dinner

A light and sattvic dinner was served.

8:30 PM – 9:00 PM: Lecture by Guruji

The day concluded with an **inspirational lecture by Guruji**, focusing on yogic philosophy, discipline, and holistic living.

Conclusion of the Day

The day concluded with a sense of physical relaxation, mental clarity, and spiritual upliftment. Exposure to **G-Section (Gastroenterology)** provided valuable insights into the application of yoga therapy for digestive disorders through structured practices, lifestyle regulation, and mind–body integration. The systematic schedule and therapeutic approach reinforced the role of yoga as an effective complementary healthcare system.

[illegible]

Section H & PHH – Positive Health and Wellness

Day 3 – 5th and 6th February 2026 (Thursday)

Definition:

The **endocrine system** is a network of **ductless glands** that secrete **hormones directly into the bloodstream** to regulate and coordinate vital body functions such as growth, metabolism, reproduction, stress response, and emotional balance.

Gland	Hormones	Major Functions
Hypothalamus	Releasing & inhibiting hormones	Links nervous system with endocrine system; maintains homeostasis
Pituitary (Master gland)	GH, TSH, ACTH, FSH, LH, Prolactin	Controls growth and regulates other endocrine glands
Thyroid	Thyroxine (T4), Triiodothyronine (T3)	Regulates metabolism, growth, energy
Parathyroid	Parathyroid hormone	Maintains calcium & phosphorus balance
Adrenal glands	Cortisol, Adrenaline, Aldosterone	Stress response, BP regulation
Pancreas (Islets)	Insulin, Glucagon	Regulates blood glucose levels
Gonads	Estrogen, Progesterone, Testosterone	Reproduction, secondary sexual characters
Pineal	Melatonin	Sleep–wake cycle, circadian rhythm

Functions of the Endocrine System

- ✓ Maintains homeostasis
- ✓ Regulates growth and development
- ✓ Controls metabolism
- ✓ Manages stress and emotions
- ✓ Regulates reproductive health
- ✓ Influences sleep and circadian rhythm

Endocrine System & Yoga Therapy (Add-on point 🌱)

- Stress disturbs hormonal balance → yoga helps normalize it
- Practices like **Pranayama, Meditation, Yoga Nidra** support:
 - a. HPA axis balance
 - b. Thyroid regulation
 - c. Blood sugar control
 - d. Emotional stability

Positive Health and Wellness – Detailed Explanation

Definition

Positive health is not merely the absence of disease but a **dynamic state of physical, mental, social, emotional, and spiritual well-being**, enabling an individual to live life with vitality, balance, and purpose.

Dimension	Description
Physical	Fitness, immunity, proper nutrition, sleep
Mental	Clarity, concentration, emotional stability
Emotional	Ability to manage stress and emotions
Social	Healthy relationships, social harmony
Spiritual	Inner peace, purpose, self-awareness
Occupational	Satisfaction and balance in work
Environmental	Harmony with nature and surroundings

Characteristics of Positive Health

- ✓ High energy levels
- ✓ Emotional balance
- ✓ Strong immunity
- ✓ Mental clarity
- ✓ Stress resilience
- ✓ Positive attitude
- ✓ Self-discipline

Relationship Between Endocrine System & Positive Health

- 🌈 Balanced hormones → better mood, immunity, metabolism
- 🌈 Chronic stress → endocrine imbalance → lifestyle disorders
- 🌈 Yoga & wellness practices restore **hormonal harmony**, leading to **positive health**

The second day of the internship commenced with **Omkāra chanting**, followed by the recitation of **Bhadram Karṇebhiḥ** and **Prātaḥ Smarāmi** shlokas, and concluded with **Om Meditation**. These practices helped cultivate mental purity, positivity, and inner awareness, preparing the mind and body for the day's therapeutic activities.

Time: 5:20AM to 6:00AM

ॐकार (Omkāra)

Meaning:

Om is the primordial sound symbolizing universal consciousness, peace, and harmony.

भद्रं कर्णेभिः (Bhadram Karṇebhiḥ)

ॐ भद्रं कर्णेभिः शृणुयाम देवाः ।
भद्रं पश्येमाक्षभिर्यजत्राः ।
स्थिरैरङ्गैस्तुष्टुवांसस्तनूभिः ।
व्यशेम देवहितं यदायुः ॥
ॐ शान्तिः शान्तिः शान्तिः ॥

Meaning:

May we hear what is auspicious, may we see what is noble, and may we live a healthy and purposeful life in the service of higher good. May peace prevail at all levels.

प्रातः स्मरामि (Prātaḥ Smarāmi)

प्रातः स्मरामि हृदि संस्फुरदात्मतत्त्वं
सच्चित्सुखं परमहंसगतिं तुरीयम् ।
यत्स्वप्नजागरसुषुप्तिमवैति नित्यं
तद्ब्रह्म निष्कलमहं न च भूतसङ्घः ॥

Meaning:

At dawn, I meditate upon the Supreme Reality shining in the heart, which is pure existence, consciousness, and bliss, beyond the states of waking, dream, and deep sleep.

ॐ ध्यान (Om Meditation)

ॐ शान्तिः शान्तिः शान्तिः ॥

Meaning:

Invocation of peace at the physical, mental, and spiritual levels.

OMKĀRA PRACTICE WITH PREPARATORY PRĀṆĀYĀMA

Introduction

Omkāra is considered the primordial sound and the foundation of all yogic practices. In the yogic tradition, Om represents the universal consciousness and serves as a powerful tool for mental purification, concentration, and spiritual elevation. At SVYASA Arogyadhama, Omkāra practice is systematically incorporated into daily therapeutic and meditative routines as part of the **Integrated Approach of Yoga Therapy (IAYT)**.

During the internship training, Omkāra practice was conducted **after the recitation of Prātaḥ Smarāmi śloka**, to facilitate internalization, mental calmness, and readiness for higher yogic practices. The practice integrates prāṇāyāma, visualization, and meditation, ensuring holistic benefits at physical, mental, and emotional levels.

Posture and Initial Preparation

The practice begins by sitting in a comfortable meditative posture such as **Vajrāsana** or **Sukhāsana**. The spine is maintained erect, shoulders relaxed, and the head aligned with the spine. Hands rest comfortably on the thighs. The eyes are gently closed, and the body is consciously relaxed. Awareness is brought to the natural flow of breath, creating a state of preparedness for the prāṇāyāma practices that follow.

Preparatory Prāṇāyāma Practices

1. Kapālabhāti Prāṇāyāma

Kapālabhāti is practiced as the initial cleansing technique to stimulate the abdominal organs and purify the respiratory passages.

- The practice is performed in **slow, medium, and fast rounds**, depending on individual capacity.
- Emphasis is placed on forceful exhalation with passive inhalation.
- After completion of the rounds, the practitioner relaxes with **normal inhalation and exhalation**.
- This relaxation phase is followed by chanting **one Omkāra**, allowing the breath and mind to stabilize.

Therapeutic significance:

Kapālabhāti improves digestion, enhances lung capacity, removes lethargy, and prepares the mind for deeper concentration.

2. Abdominal Breathing

Abdominal breathing is practiced for **six rounds**.

- ✓ During inhalation, the abdomen gently expands.
- ✓ During exhalation, the abdomen contracts smoothly.
- ✓ The breath remains slow, rhythmic, and effortless.

Therapeutic significance:

This practice calms the nervous system, reduces stress, and improves awareness of diaphragmatic breathing.

3. Nāḍī Śodhana Prāṇāyāma

Nāḍī Śodhana Prāṇāyāma is practiced for **six rounds**.

- Alternate nostril breathing is performed in a relaxed and steady manner.
- Equal attention is given to inhalation and exhalation without breath retention.

Therapeutic significance:

Nāḍī Śodhana balances the autonomic nervous system, purifies energy channels, enhances emotional balance, and improves mental clarity.

4. Bhrāmarī Prāṇāyāma

Bhrāmarī Prāṇāyāma is practiced for **six rounds**.

- ✓ Inhalation is slow and deep.
- ✓ During exhalation, a gentle humming sound is produced.
- ✓ Awareness is maintained on the vibration felt in the head and facial region.

Therapeutic significance:

Bhrāmarī reduces anxiety, calms mental fluctuations, relieves stress, and prepares the mind for meditation.

After completing all prāṇāyāma practices, the practitioner remains still for a few moments, allowing the breath to return to its natural rhythm.

Omkāra Dhyāna (Meditation on Om)

External Observation of Omkāra

The practitioner gently opens the eyes and begins observing the **Omkāra symbol** placed in front.

- ✓ Initially, attention is focused on the **mid-point of the Omkāra**.
- ✓ Awareness is then slowly shifted to the **upper point (Bindu)**.
- ✓ Finally, the entire Omkāra form is observed as a complete symbol.

This visual observation enhances concentration and reduces external distractions.

Internal Visualization

After external observation:

The eyes are gently closed.

The practitioner visualizes the complete Omkāra internally.

- ✓ The image is observed at the space **between the two eyebrows (Bhrūmadhya / Ājñā Chakra)**.

If the image is not clearly perceived initially:

- ✓ The eyes are gently opened.
- ✓ The Omkāra is observed again externally.
- ✓ The eyes are closed and internal visualization is continued.

This process is repeated participantly without strain or effort.

Subtle Awareness and Absorption

As the practice deepens:

- ✓ The practitioner begins to perceive the **rays, glow, and radiance** of the Omkāra.
- ✓ Awareness gradually becomes subtle and internalized.
- ✓ Mental fluctuations reduce, leading to a state of calm alertness.

The practice is continued for **a few minutes**, allowing the mind to merge with the symbol of Om.

Relaxation Phase

After visualization:

- ✓ The practitioner remains seated quietly.
- ✓ Breath flows naturally without control.
- ✓ Awareness rests in the calmness and stillness generated by the practice.

This phase allows integration of the physiological and psychological benefits of Omkāra meditation.

Concluding Śānti Mantra

The practice is concluded with the chanting of the peace mantra:

सर्वे जनाः सुखिनो भवन्तु ।
सर्वे सन्तु निरामयाः ।
सर्वे भद्राणि पश्यन्तु ।
मा कश्चिद् दुःखभाग्भवेत् ।
ॐ शान्तिः शान्तिः शान्तिः ॥

Meaning:

May all beings be happy, may all be free from illness, may all experience auspiciousness, and may none suffer. May peace prevail at all levels.

Conclusion

Omkāra practice combined with preparatory prāṇāyāma forms an essential component of yogic therapy at SVYASA Arogyadhama. The systematic progression from breath regulation to visualization and meditation facilitates deep relaxation, emotional balance, and heightened awareness. This practice plays a significant role in stress management, psychosomatic healing, and spiritual growth, making it a valuable therapeutic tool in yoga therapy training.

6:00 AM – 6:55 AM: Special Technique (Section-wise – H-Section)

Kriya Practices

JALA NETI

Meaning of Jala Neti

- ✓ **Jala** = water
- ✓ **Neti** = nasal cleansing

Jala Neti is a yogic cleansing practice (Shatkarma) in which **lukewarm saline water** is passed through the nostrils to cleanse the nasal passages.

Requirements (Materials Needed)

- ✓ Neti pot / Neti lota
- ✓ Lukewarm water
- ✓ Rock salt (saindhava lavana)

Saline Preparation:

- ✚ Add ½ teaspoon of salt to ½ liter of lukewarm water
- ✚ Water should taste similar to tears (neither salty nor plain)

Position

- ❖ Stand in **Kagasana** (squat) or lean forward slightly
- ❖ Keep the body relaxed
- ❖ Breathe through the mouth throughout the practice

Step 1: Preparation

- ✓ Fill the neti pot with saline water
- ✓ Ensure the water temperature is comfortable (lukewarm)

Step 2: Head Position

- ✓ Bend forward slightly
- ✓ Tilt the head to the **right side**
- ✓ Insert the nozzle gently into the **left nostril**

Step 3: Flow of Water

- ✚ Keep the mouth open and breathe normally through the mouth
- ✚ Allow water to flow from the **left nostril → out through the right nostril**
- ✚ Do not sniff, inhale, or swallow the water

Step 4: Change the Side

- ✓ Remove the pot
- ✓ Tilt the head to the **left side**
- ✓ Insert the nozzle into the **right nostril**
- ✓ Let the water flow out through the left nostril

Step 5: Completion

- ✓ After both sides are done, stand upright
- ✓ Bend forward slightly and gently blow out the remaining water from both nostrils

Step 6: Drying the Nose

- ✚ Perform Kapalabhati (mild) or forceful exhalation
- ✚ Do 10–20 gentle rounds
- ✚ Ensure no water remains in the nasal passages

Duration & Frequency

Time: 3–5 minutes

Frequency:

- a. Daily for sinus/allergy problems
- b. 2–3 times a week for general cleansing

BENEFITS OF JALA NETI

- ✓ Cleans nasal passages and sinuses
- ✓ Improves breathing capacity
- ✓ Prevents sinusitis, rhinitis, and allergies
- ✓ Reduces cold, cough, and headache
- ✓ Enhances concentration and mental clarity
- ✓ Prepares the body for pranayama and meditation

PRECAUTIONS

- ❖ Water must be lukewarm and saline
- ❖ Never practice with plain or cold water
- ❖ Do not force the water flow
- ❖ Always dry the nose properly after practice

CONTRAINDICATIONS

- Active nose bleeding (epistaxis)
- Severe sinus infection
- Recent nasal surgery
- Deviated nasal septum (without guidance)

Therapeutic Application

- ✓ Sinusitis
- ✓ Allergic rhinitis
- ✓ Asthma (as supportive therapy)
- ✓ Migraine (related to sinus congestion)
- ✓ Upper respiratory infections

VAMANA DHAUTI (KUNJAL KRIYA)

Meaning

- ✓ **Vamana** = vomiting
- ✓ **Dhauti** = cleansing

Vamana Dhauti, also known as **Kunjal Kriya**, is a yogic cleansing technique in which **lukewarm saline water is voluntarily expelled through the mouth** to cleanse the stomach and upper digestive tract.

Requirements

- ✓ 1.5 to 2 liters of **lukewarm water**
- ✓ **Rock salt** (Saindhava lavana)

Saline Preparation:

- ✓ Add **1–2 teaspoons of salt** to 1.5–2 liters of water
- ✓ Water should taste slightly salty (similar to sea water)

Time of Practice

- Early morning
- **Empty stomach**
- After bowel evacuation

STEP-BY-STEP PROCEDURE

Step 1: Preparation

- ✓ Sit in Kagasana (squatting position) or stand comfortably
- ✓ Relax the body and mind

Step 2: Drinking Water

- ✓ Drink the saline water continuously without gaps
- ✓ Drink until the stomach feels completely full
- ✓ Do not sip slowly; drink steadily

Step 3: Inducing Vamana

- ✚ Lean forward
- ✚ Insert **two fingers** (index and middle) gently into the throat
- ✚ Lightly stimulate the tongue root
- ✚ Water will come out forcefully through the mouth

Step 4: Complete Emptying

- ✓ Continue until most of the water is expelled
- ✓ The water should come out clean at the end

Step 5: After Practice

- ✚ Wash the mouth thoroughly
- ✚ Sit quietly for a few minutes
- ✚ Practice **deep breathing or relaxation**

Duration & Frequency

Time: 5–10 minutes

Frequency:

- Once a week (general cleansing)
- Only under expert guidance for therapeutic use

BENEFITS OF VAMANA DHAUTI

- ✓ Cleanses the stomach and food pipe
- ✓ Removes excess **Kapha dosha**
- ✓ Improves digestion and appetite
- ✓ Relieves acidity, gas, and bloating
- ✓ Beneficial in asthma, bronchitis, and allergies
- ✓ Reduces heaviness and lethargy

PRECAUTIONS

- ❖ Must be practiced only on an empty stomach
- ❖ Water should be lukewarm and saline
- ❖ Do not strain or force vomiting
- ❖ Always learn under a qualified yoga therapist

CONTRAINDICATIONS

- Heart disease
- High blood pressure
- Hernia
- Peptic ulcer
- Pregnancy
- Recent surgery
- Severe weakness

Therapeutic Applications

- Hyperacidity
- GERD
- Asthma (Kapha-dominant)
- Chronic cough
- Indigestion

LAGHU SHANKHA PRAKSHALANA (LSP)

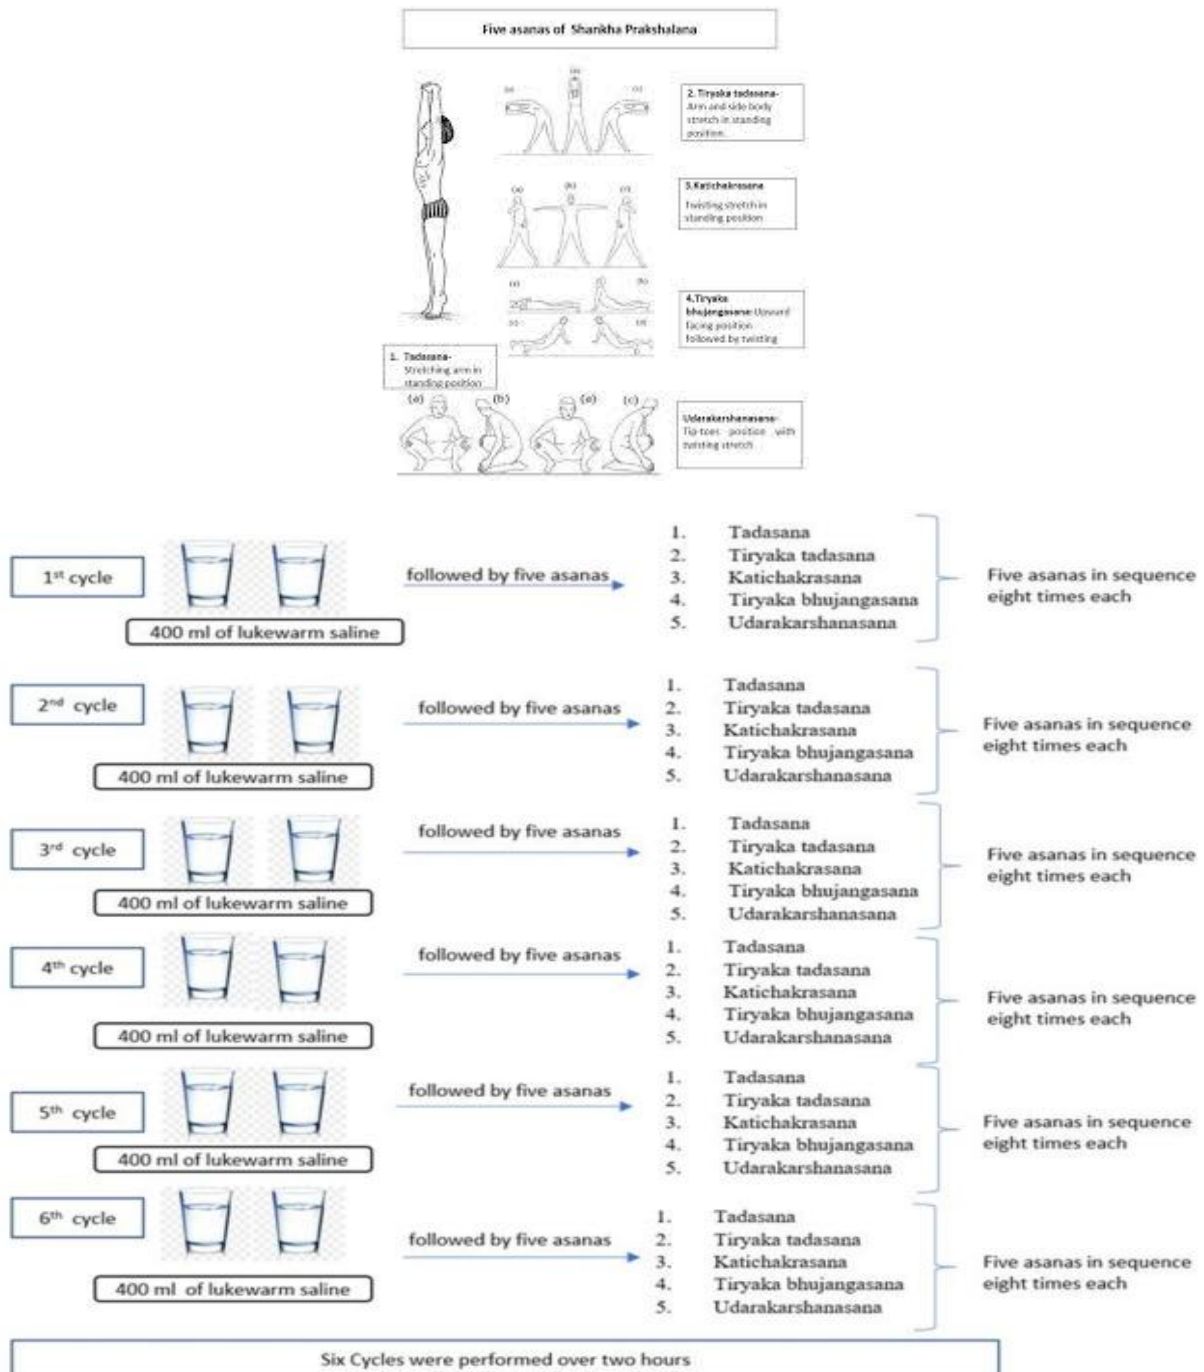

Meaning

Laghu = light / short

Shankha = conch (intestine resembles a conch shell)

Prakshalana = washing / cleansing

Laghu Shankha Prakshalana is a **mild yogic intestinal cleansing practice** in which **lukewarm saline water** is taken along with **specific yoga asanas** to cleanse the intestines.

Time & Preparation

- ✓ Early morning
- ✓ **Empty stomach**
- ✓ After bowel evacuation
- ✓ Practice in a calm environment

Requirements

- ✓ 1 to 1.5 liters of **lukewarm water**
- ✓ Rock salt (Saindhava lavana)

Saline Preparation:

- ✚ Add ½ teaspoon of salt to 1 liter of water
- ✚ Water should taste mildly salty (not plain, not too salty)

STEP-BY-STEP PROCEDURE

Step 1: Drink Saline Water

- Drink **2 glasses** of lukewarm saline water
- Drink continuously, not slowly sipping

Step 2: Perform the 5 Asanas (8–10 times each)

Tadasana

- ✓ Stretches the body upward
- ✓ Helps water move downward

Hand Stretch and Toe Release

- ✓ **Description:**
Stretching the fingers, palms, and toes followed by relaxation.

Tiryaka Tadasana

- Side bending posture
- Helps water move through intestines

Kati Chakrasana

- ❖ Twisting posture
- ❖ Facilitates intestinal movement

Tiryaka Bhujangasana

- ✓ Twisting cobra pose
- ✓ Helps water pass through the small intestine

Udarakarshanasana

- Abdominal squeezing posture
- Pushes water into the large intestine

Step 3: Repeat the Cycle

- ✓ Again drink 2 glasses of saline water
- ✓ Repeat the 5 asanas
- ✓ Continue this cycle 2–3 times

Step 4: Bowel Evacuation

- ❖ You will feel the urge to pass stools
- ❖ Go to the toilet and evacuate naturally
- ❖ Do not strain

Step 5: Completion

- Stop when evacuation becomes light / watery
- Rest in **Shavasana** for 10–15 minutes

Duration & Frequency

Time: 30–45 minutes

Frequency:

- Once in 15 days or once a month
- Only under guidance for therapeutic use

BENEFITS

- ✓ Cleanses intestines gently
- ✓ Improves digestion and metabolism
- ✓ Relieves constipation and gas
- ✓ Reduces acidity and bloating
- ✓ Removes toxins (Ama)
- ✓ Improves gut health
- ✓ Balances Kapha and Pitta

PRECAUTIONS

- ✚ Water must be lukewarm and saline
- ✚ Perform asanas gently, without strain
- ✚ Do not overdo water intake
- ✚ Always rest after completion

CONTRAINDICATIONS

- Peptic ulcer
- Hernia
- Intestinal obstruction
- Severe back pain
- Pregnancy
- Recent abdominal surgery
- Severe weakness

Therapeutic Applications

- Chronic constipation
- Indigestion
- IBS (under guidance)
- Acidity
- Sluggish bowel movement

Conclusion of Kriya Session

The kriya session was completed systematically with proper guidance and awareness of breath. All cleansing practices were performed with attention to posture, relaxation, and safety precautions. Participants reported a feeling of lightness, improved breathing, and mental clarity after the practices.

7:00AM to 08:00AM – Maitri Milan

Maitri Milan was conducted as a **group spiritual session**, promoting emotional bonding and mental positivity. The session included:

The session began with the chanting of **Ganesha Stotra**, invoking auspiciousness and the removal of obstacles, followed by **Dakshinamurthy Stotram**, which signifies the principle of the Guru and supreme knowledge.

This was followed by the recitation of the **Pratah Smarami Sloka**, cultivating gratitude and right orientation at the beginning of the session.

Selected verses from the **Bhagavad Gita** were then chanted, reinforcing values of dharma, self-awareness, and balanced living.

The Maitri Milan session concluded with an enlightening lecture by **Sri. Dr. Kambhampati Subramanyam**, who shared valuable insights on yogic living, self-discipline, and the integration of spiritual wisdom into daily life.

8:00 AM – 9:00 AM: Breakfast

A **sattvic breakfast** was served, supporting digestion and aligning with yogic dietary principles followed at Arogyadhama.

9:00AM to 9:55AM Parameters

Date: 6th February 2026

Section: -H-Section

Place: SVYASA Arogyadhama

Case Study: 1

Participant Profile

Name: *****

Age: 59 years

Gender: Male

Occupation: Retired

Marital Status: Married

- ✓ Duration of Stay: 1 week
- ✓ Place of Treatment: Arogyadhama, SVYASA

2. Chief Complaints

- Disturbed sleep since **2 years** (sleep duration ~3 hours)
- Sticky eyes since **3 years**

- Gradual weight gain since **3 years**
- Lower back pain since **3 years**
- Right knee pain since **2–3 years**

3. History of Present Illness

The participant presented with complaints of chronic disturbed sleep for the past two years, associated with sticky sensation in the eyes and gradual increase in body weight over the last three years. He also reported chronic low back pain aggravated during travel and right knee pain while walking.

Sleep disturbance was characterized by difficulty in maintaining sleep. Weight gain was gradual and associated with reduced physical activity after retirement. He had earlier consulted physicians and was on medication for sleep. For holistic management, he visited Arogyadhama for integrated therapy.

4. Past History

- ✓ **Surgical History:** Laparoscopic appendectomy (January 2025)
- ✓ **Medical History:** No major chronic systemic illness
- ✓ **Family History:** Mother – Cancer
- ✓ **Addictions:** Alcohol – occasional, Smoking – none

5. Clinical Diagnosis

- ❖ Primary Diagnosis: Overweight
- ❖ Associated Conditions:
 - ✓ Inorganic insomnia
 - ✓ Chronic low back pain
 - ✓ Right knee pain

6. General Examination

- 🚦 Pallor / Icterus / Cyanosis / Clubbing / Edema: **Absent**
- 🚦 Conscious and oriented
- 🚦 Moderately built and nourished

7. Baseline Parameters

Parameter	On Admission	On Discharge
Weight	79.1 kg	78.5 kg
BMI	29.1 kg/m ²	29 kg/m ²
Pulse	89 bpm	80 bpm

Parameter	On Admission	On Discharge
Blood Pressure	116/78 mmHg	110/70 mmHg
Respiratory Rate	18/min	22/min
Bhramari Time	12 sec	14 sec
Height	165 cm	165 cm
Mid-arm Circumference	35 cm	34 cm
Hip Circumference	108 cm	106 cm

8. Investigations

- ✓ Fasting Blood Sugar: **101 mg/dl**
- ✓ Triglycerides: **165.57 mg/dl**
- ✓ HDL: **29.56 mg/dl**
- ✓ CRP: **8.44**

9. Yoga Therapy Intervention

a) Breathing Practices

- ❖ Hands-in & Hands-out breathing
- ❖ Hand stretch breathing
- ❖ Tiger breathing

b) Loosening Practices

- ✓ Jogging
- ✓ Forward & backward bending
- ✓ Back stretch with alternate leg
- ✓ Butterfly
- ✓ Cycling
- ✓ Pawanamuktasana Kriya
- ✓ Dhanurasana swing
- ✓ Naukasana

c) Pranayama

- ✓ Nadishuddhi
- ✓ Bhramari
- ✓ Surya Anuloma
- ✓ Vibhagiya Pranayama

d) Relaxation & Meditation

- Mind Sound Resonance Technique (MSRT)
- Cyclic Meditation (CM)

10. Naturopathy Therapy

Date	Treatment
02/02/26	Neutral under-water massage
04/02/26	Neutral spinal spray

11. Ayurveda Therapy

- ✓ Shirodhara with Triphala Taila
- ✓ Sarvanga Abhyanga

12. Naturopathy Diet Plan

Daily Schedule

- **Early Morning:** Lemon honey juice / Ash gourd juice / Bottle gourd juice
- **Breakfast:** Sprouted gram / Oats / Boiled vegetables
- **Lunch:** Boiled diet (rice, vegetables, ash gourd, bottle gourd, greens)
- **Evening:** Vegetable soup
- **Dinner:** Fruits + vegetable salads

Dietary Guidelines

- ✓ Adequate hydration (3–4 liters/day)
- ✓ Avoid fried foods, junk food, bakery items
- ✓ Avoid banana, mango
- ✓ Prefer seasonal fruits and leafy vegetables

13. Medication (Allopathy)

- Tablet Clonotril 0.5 mg – SOS (for sleep)

14. Condition at Discharge

- ✓ Overall health improved
- ✓ Sleep quality improved
- ✓ Bowel habits normalized
- ✓ Reduction in body weight and waist circumference
- ✓ Reduced body heaviness and stress

15. Discharge Advice & Follow-Up

- Continue yoga practices (Asana, Pranayama, Meditation)
- Follow naturopathy diet strictly
- Hot foot immersion at night (10–15 minutes)
- Cold abdominal pack daily (10 minutes)
- Barefoot walking on grass
- Follow-up after 3 months

16. Conclusion

This case demonstrates the effectiveness of an **integrated Yoga, Naturopathy, and Ayurveda approach** in managing overweight associated with sleep disturbance and musculoskeletal

pain. Significant improvement was observed in sleep quality, body weight, digestion, and overall well-being within a short duration of one week.

Case Study- 2

Participant Profile

Name: *****

Age: 31 years

Gender: Male

Occupation: Business

Duration of Stay: 28/01/2026 – 03/02/2026

Place of Treatment: Arogyadhama, SVYASA

2. Chief Complaints

- i. Chalazion (lump formation under eyes) – 1 year
- ii. Allergy and swelling under eyes – 1 year
- iii. Acne vulgaris – 2 years

3. History of Present Illness

A 31-year-old male participant presented with complaints of recurrent allergy and swelling under both eyes for the past one year. He was diagnosed with chalazion. The swelling initially appeared in the right eye and later involved the left eye. Symptoms were aggravated by prolonged screen exposure and irregular dietary habits.

The participant also reported acne vulgaris since two years. Lesions were recurrent and associated with occasional inflammation. He had taken symptomatic treatment earlier with temporary relief.

For holistic management and long-term relief, he was admitted to Arogyadhama for integrated Yoga, Naturopathy, and Ayurveda therapy.

4. Past History

- ✓ No history of Diabetes Mellitus
- ✓ No history of Hypertension
- ✓ No cardiac illness
- ✓ No major surgery
- ✓ No addiction history

5. Family History

- No significant hereditary illness reported

6. Clinical Diagnosis

- ❖ Primary Diagnosis: Chalazion
- ❖ Secondary Diagnosis: Acne Vulgaris

7. General Physical Examination

- Pallor – Absent
- Icterus – Absent
- Cyanosis – Absent
- Clubbing – Absent
- Edema – Absent
- Conscious and oriented

8. Baseline Parameters

Parameter	On Admission	On Discharge
Pulse Rate	70 bpm	72 bpm
Blood Pressure	120/80 mmHg	120/80 mmHg
Respiratory Rate	12/min	14/min
Weight	69.5 kg	67.25 kg
BMI	~24 kg/m ²	Slightly reduced
Bhramari Time	15 sec	19 sec
Sleep	Disturbed	Sound
Bowel	Not clear	Clear

9. Systemic Examination

- ✓ CVS – S1 S2 normal
- ✓ RS – Clear
- ✓ CNS – Conscious, oriented
- ✓ Abdomen – Soft

10. Yoga Therapy Intervention

A. Breathing Practices

- ✚ Hands-in and Hands-out breathing
- ✚ Hand stretch breathing
- ✚ Tiger breathing

B. Loosening Practices

- ✓ Forward and backward bending
- ✓ Twisting practices
- ✓ Eye exercises

C. Pranayama

- ✓ Nadishuddhi Pranayama

- ✓ Bhramari Pranayama

D. Relaxation Techniques

- ✓ Cyclic Meditation (CM)
- ✓ Om chanting

11. Naturopathy Therapy

- ✓ Neutral spinal spray
- ✓ Cold eye pack
- ✓ Hot foot immersion
- ✓ Yogic cleansing practices

12. Ayurveda Therapy

- Snehapana with Guggulu Ghrita (30 ml → 60 ml → 90 ml)
- Sarvanga Abhyanga with Swedana (3 days)
- Virechana therapy administered

13. Naturopathy Diet Plan

Early Morning

- 🌸 Ash gourd juice / Bottle gourd juice

Breakfast

- ✓ Khichdi / Light breakfast

Lunch

- ✓ Boiled diet (vegetables, rice, buttermilk)

Evening

- ✓ Vegetable soup

Dinner

Fruits and vegetable salad

Dietary Advice

- Avoid oily, spicy, junk foods
- Avoid bakery products and deep-fried items
- Increase water intake
- Follow sattvic diet

14. Medication

- ✓ No regular allopathic medication
- ✓ Ayurvedic medicines as prescribed during therapy

15. Condition at Discharge

- 🌸 Eye swelling significantly reduced
- 🌸 Allergy symptoms decreased
- 🌸 Acne lesions reduced
- 🌸 Sleep quality improved
- 🌸 Bowel habits normalized
- 🌸 Overall health improved

Participant was clinically stable at the time of discharge.

16. Discharge Advice

- ✓ Continue Yoga therapy practices daily
- ✓ Maintain naturopathy diet
- ✓ Avoid excessive screen exposure
- ✓ Maintain eye hygiene
- ✓ Follow-up as advised

17. Discussion

Chalazion and acne vulgaris are often associated with improper digestion, toxin accumulation, and lifestyle imbalance. Integrated Yoga Therapy combined with naturopathy and Ayurveda helped in detoxification, improving digestion, balancing doshas, and enhancing overall immunity. The participant showed significant symptomatic relief within a short duration.

18. Conclusion

This case demonstrates that an integrated approach of Yoga Therapy, Naturopathy, and Ayurveda is effective in managing chalazion and acne vulgaris by addressing the root cause and improving overall systemic health.

10:00AM to 10:55AM – Lecture

The next session comprised a lecture on **Panchakosha**, conducted by **Karibasappa Sir**, focusing on the concept of the five sheaths of human existence and their role in understanding health and disease.

Pancha Koshas (Five Sheaths of Human Existence)

The concept of **Pancha Koshas** is described in the **Taittiriya Upanishad**. It explains that human existence is composed of **five sheaths (Koshas)** that cover the true Self (**Atman**).

“**Pancha**” means *five*

“**Kosha**” means *sheath or layer*

These sheaths range from the **gross physical level to the subtle spiritual level**.

1. Annamaya Kosha (Physical Sheath)

Meaning:

Anna = Food

The body formed and sustained by food

Components:

- ✓ Skin, muscles, bones
- ✓ Organs and tissues
- ✓ Physical structure

Characteristics:

- ✓ Subject to birth, growth, and decay
- Nourished by food

Imbalance Leads To:

- Obesity
- Malnutrition
- Physical diseases

Yogic Practices:

- ✚ Asanas
- ✚ Proper diet (Sattvik food)
- ✚ Physical exercise
- ✚ Shatkriyas

2. Pranamaya Kosha (Energy Sheath)

Meaning:

- *Prana* = Vital life force

Components:

- ✓ Five Pranas: Prana, Apana, Samana, Udana, Vyana
- ✓ Nadis: Ida, Pingala, Sushumna

Functions:

- Respiration
- Circulation
- Energy flow

Imbalance Leads To:

- ✚ Fatigue
- ✚ Breathlessness
- ✚ Low vitality

Yogic Practices:

- ❖ Pranayama
- ❖ Nadi Shodhana
- ❖ Bhastrika
- ❖ Surya Namaskar

3. Manomaya Kosha (Mental Sheath)

Meaning:

- *Manas* = Mind

Components:

- ✓ Thoughts
- ✓ Emotions
- ✓ Sensory processing

Functions:

- ✓ Perception
- ✓ Emotional responses

Imbalance Leads To:

- Stress
- Anxiety
- Mood disorders

Yogic Practices:

- Meditation
- Bhakti Yoga
- Chanting (Omkar)
- Relaxation techniques

💡 4. Vijñanamaya Kosha (Intellectual Sheath)

Meaning:

- *Vijnana* = Wisdom or intellect

Components:

- ❖ Buddhi (intellect)
- ❖ Discrimination (Viveka)
- ❖ Decision-making ability

Functions:

- ✓ Moral reasoning
- ✓ Judgment and clarity

Imbalance Leads To:

- ✓ Confusion
- ✓ Poor decision-making
- ✓ Lack of clarity

Yogic Practices:

- Self-inquiry (Swadhyaya)
- Study of scriptures
- Mindfulness practices

5. Anandamaya Kosha (Bliss Sheath)

Meaning:

- *Ananda* = Bliss

Nature:

- State of deep inner peace
- Experienced during deep sleep and Samadhi

Characteristics:

- ✚ Closest sheath to Atman
- ✚ Beyond ego and duality

Practices:

- ✓ Deep meditation
- ✓ Devotion (Bhakti)
- ✓ Surrender
- ✓ Samadhi

Pancha Koshas and Health (Clinical Perspective)

Kosha	Modern Correlation	Disease Link
Annamaya	Physical body	Lifestyle disorders
Pranamaya	Autonomic nervous system	Respiratory disorders
Manomaya	Psychology	Stress, anxiety
Vijnanamaya	Cognitive function	Behavioral issues
Anandamaya	Spiritual wellbeing	Existential distress

Therapeutic Application in Yoga Therapy

According to yogic understanding:

- ✓ Disease originates at the subtle level (Manomaya Kosha)
- ✓ Then affects the Pranamaya Kosha
- ✓ Finally manifests in the Annamaya Kosha

Hence, yoga therapy should include:

- ✓ Physical correction (Asana, diet)
- ✓ Breath regulation (Pranayama)
- ✓ Mental purification (Meditation, relaxation)
- ✓ Spiritual alignment (Bhakti, self-awareness)

11:00 AM – 12:00 PM: Self-Study (Male Interns)

Male interns utilized this time for **self-study** by visiting the library and referring to:

- ✓ Yoga therapy theses
- ✓ Dissertations
- ✓ Yoga Itihasa
- ✓ Classical yogic texts

This session enhanced theoretical understanding and research orientation.

12:00 PM – 1:00 PM: Special Technique / PET (H-Section)

Session II – Special Techniques (Section “H”)

Session II was designed to improve **muscular strength, joint mobility, spinal flexibility, cardiovascular endurance, and neuromuscular coordination**. The practices were structured progressively, starting from warm-up exercises and moving toward dynamic asanas, followed by relaxation.

1. Warm-up Exercises

The session began with **general warm-up exercises** to prepare the muscles, joints, and cardiovascular system for practice. These movements helped increase blood circulation, reduce stiffness, and prevent injury during the main asana practices.

Benefits:

- ✓ Loosens joints and muscles
- ✓ Improves circulation
- ✓ Prepares the body for dynamic movements

2. Utkatasana (Sit-to-Stand Practice)

Utkatasana was practiced in the form of repeated **sit-to-stand movements**, engaging the lower body muscles.

Benefits:

- Strengthens thighs, hips, and knees
- Improves balance and coordination
- Enhances endurance of lower limb muscles

3. Surya Namaskara (10 Rounds)

Surya Namaskara was practiced for **10 rounds** as a dynamic sequence of postures synchronized with breathing.

Benefits:

- Improves cardiovascular endurance
- Enhances flexibility of the spine
- Strengthens major muscle groups
- Stimulates digestive and endocrine systems

4. Jathara Parivartanasana (10 Repetitions)

Jathara Parivartanasana involves gentle spinal twisting in the supine position.

Benefits:

- ✓ Strengthens abdominal muscles
- ✓ Improves spinal flexibility
- ✓ Massages abdominal organs
- ✓ Aids digestion

5. Bhujangasana (10 Repetitions)

Bhujangasana was practiced to strengthen the back and open the chest.

Benefits:

- ✓ Strengthens the spinal muscles
- ✓ Improves posture
- ✓ Expands the chest and lungs
- ✓ Relieves stiffness in the spine

6. Deep Relaxation Technique (DRT)

The session concluded with **Deep Relaxation Technique (DRT)** to allow complete physical and mental relaxation.

Benefits:

- ✚ Relaxes muscles and nervous system
- ✚ Reduces stress and fatigue
- ✚ Promotes recovery after physical exertion
- ✚ Enhances mind–body awareness

Overall Outcome of Session II

Session II effectively combined **dynamic movements and relaxation**, resulting in improved strength, flexibility, stamina, and relaxation. The session prepared participants physically and mentally for advanced yogic practices.

1:00 PM – 2:00 PM: Lunch

A balanced **sattvic lunch** was provided, supporting digestive health and recovery.

2:00 PM – 2:30 PM: Rest

A short rest period was given to allow digestion and physical recovery.

2:30 PM – 3:10 PM: MSRT (Mind Sound Resonance Technique)

Mind Sound Resonance Technique (MSRT)

Introduction

Mind Sound Resonance Technique (MSRT) is a guided yogic relaxation practice that uses **sound, mantra, and awareness** to induce deep mental calmness and internal silence. The practice works on the principle that **sound vibrations resonate through the body and mind**, helping to release stress, balance emotions, and enhance inner awareness. MSRT is an integral component of the **Integrated Approach of Yoga Therapy (IAYT)**.

Procedure of MSRT

Step 1: Opening Prayer

The practice begins with a prayer for healing and well-being:

ॐ त्र्यम्बकं यजामहे सुगन्धिं पुष्टिवर्धनम् ।
उर्वारुकमिव बन्धनान् मृत्योर्मुक्षीय मामृतात् ॥
ॐ शान्तिः शान्तिः शान्तिः ॥

(Mrityunjaya Mantra)

This prayer invokes protection, nourishment, and freedom from suffering.

Step 2: A-U-M Chanting

a) Loud Chanting (Āhata Phase)

-  Loud chanting of **A, U, M**, and **AUM** is done for **3 rounds**.
-  Participants are instructed to **feel the resonance of sound throughout the body**, from head to toe.

b) Mental Chanting (Anāhata Phase)

- ✓ Chanting of **A, U, M**, and **AUM** is repeated **mentally for 3 rounds**.
- ✓ Awareness is maintained on the **subtle inner vibrations**, even without vocal sound.

Step 3: Mrityunjaya Mantra Chanting

a) Loud Chanting

The Mrityunjaya Mantra is chanted loudly for **3 rounds**:

ॐ त्र्यम्बकं यजामहे सुगन्धिं पुष्टिवर्धनम् ।
उर्वारुकमिव बन्धनात् मृत्योर्मुक्षीय मामृतात् ॥
ॐ शान्तिः शान्तिः शान्तिः ॥

Participants are guided to **feel the pattern of resonant waves spreading throughout the body**.

b) Mental Chanting (Anāhata)

- Mental chanting of the mantra (**MM, MM, MM**) is done for **3 rounds**.
- Resonance is felt internally at a deeper mental level.

Step 4: Anāhata AUM (9 Rounds)

- ✓ **AUM** is repeated mentally for **9 rounds**.
- ✓ Attention is placed on the **mind-level resonance**, experiencing vibrations spreading through the entire body.

Step 5: Ajapājapa AUM to Silence (9 Rounds)

- ❖ The natural flow of **AUM** is observed mentally without effort.
- ❖ The sound gradually **merges into silence**.
- ❖ Participants feel the resonance of OM rising and dissolving into stillness.

Step 6: Stay in Silence

Participants remain in **complete silence**, observing inner awareness without any sound or effort.

Step 7: Resolve

A **positive resolve (Sankalpa)** is taken mentally, reinforcing healing, calmness, and well-being.

Step 8: Closing Prayer (Śānti Mantra)

सर्वे भवन्तु सुखिनः ।
सर्वे सन्तु निरामयाः ।
सर्वे भद्राणि पश्यन्तु ।
मा कश्चिद् दुःखभाग्भवेत् ॥
ॐ शान्तिः शान्तिः शान्तिः ॥

Meaning:

May all be happy, may all be free from disease, may all see auspiciousness, and may none suffer.

Benefits of MSRT

- ✓ Deep mental relaxation
- ✓ Reduction of stress and anxiety
- ✓ Enhanced emotional stability
- ✓ Improved concentration and awareness
- ✓ Supportive in psychosomatic disorders

Conclusion

Mind Sound Resonance Technique systematically guides the practitioner from **external sound (Āhata)** to **inner silence (Anāhata)**. Through structured chanting, mental repetition, and silence, MSRT helps the mind settle into a state of **alert calmness and inner harmony**, making it a powerful therapeutic and meditative practice at SVYASA

3:20 PM – 4:00 PM: Prāṇāyāma and Naadanusandhana

Prāṇāyāma Session

Introduction

Prāṇāyāma is the yogic practice of regulating the breath to influence the flow of prāṇa (vital energy) in the body. In yoga therapy, prāṇāyāma plays a crucial role in balancing the autonomic nervous system, improving organ function, reducing stress, and preparing the mind for relaxation and meditation. During the session, prāṇāyāma practices were performed in a **systematic sequence**, progressing from cleansing and activating techniques to calming and cooling practices, and concluding with deep relaxation.

1. Kapālabhāti Prāṇāyāma

Kapālabhāti was practiced as the initial cleansing technique.

- ✓ The practice involved **forceful and rhythmic exhalation**, with passive inhalation.
- ✓ Emphasis was placed on abdominal contraction during exhalation.
- ✓ The practice was performed slowly and mindfully according to individual capacity.

Therapeutic effect:

Kapālabhāti helps in cleansing the respiratory passages, stimulating abdominal organs, improving digestion, enhancing metabolic activity, and increasing alertness.

2. Abdominal Breathing

After Kapālabhāti, **abdominal breathing** was practiced.

- During **inhalation**, the abdomen gently bulged outward.
- During **exhalation**, the abdomen moved inward.
- Participants were instructed to **observe the natural movement of the stomach** with each breath.
- The breathing was slow, smooth, and effortless.

Therapeutic effect:

Abdominal breathing promotes parasympathetic dominance, reduces stress, calms the mind, and improves oxygenation.

3. Nāḍī Śuddhi (Nāḍī Śodhana) Prāṇāyāma

Nāḍī Śuddhi Prāṇāyāma was practiced to purify the energy channels.

- ✓ Alternate nostril breathing was performed in a relaxed manner.
- ✓ Equal duration of inhalation and exhalation was maintained.
- ✓ Breath awareness was emphasized without breath retention.

Therapeutic effect:

Nāḍī Śuddhi balances the sympathetic and parasympathetic nervous systems, improves emotional stability, and enhances mental clarity.

4. Bhrāmarī Prāṇāyāma

Bhrāmarī Prāṇāyāma was practiced next.

- ✓ Inhalation was slow and deep.
- ✓ During exhalation, a gentle **humming sound** was produced.
- ✓ Awareness was maintained on the vibrations felt in the head and chest region.

Therapeutic effect:

Bhrāmarī calms the nervous system, reduces anxiety, relieves mental tension, and promotes inner silence.

5. Cooling Prāṇāyāma

Cooling prāṇāyāma practices were performed to reduce heat in the body and calm the mind.

a) Śītalī Prāṇāyāma

- ✓ Inhalation was done through the rolled tongue.
- ✓ Exhalation was done through the nose.

b) Śītkārī Prāṇāyāma

- ✚ Inhalation was done through clenched teeth with a hissing sound.
- ✚ Exhalation was done through the nose.

c) Sadanta Prāṇāyāma

- ✓ Inhalation was performed gently through the teeth.
- ✓ Exhalation was slow and relaxed through the nose.

Therapeutic effect:

Cooling prāṇāyāma reduces body heat, soothes the nervous system, alleviates stress, and is beneficial for gastritis, acidity, and psychosomatic disorders.

6. Naadanusandhana (Sound Awareness Practice)

After pranayama, the session proceeded to **Naadanusandhana**, a meditative practice involving awareness of internal and external sounds.

The practice included:

- ✓ Chanting of A, U, M (AUM)
- ✓ Gradual transition from audible sound to mental repetition
- ✓ Silent awareness of inner sound

Benefits of Naadanusandhana:

- ✚ Deepens concentration
- ✚ Calms fluctuations of the mind
- ✚ Enhances inner awareness
- ✚ Reduces emotional disturbances
- ✚ Leads to mental clarity and relaxation

Conclusion of the Session

The Pranayama and Naadanusandhana session resulted in deep physical relaxation and mental calmness. Participants experienced improved breath awareness, reduced stress, and a sense of inner stillness. The session effectively prepared the participants for meditation and higher yogic practices.

4:00 PM – 5:00 PM: Special Technique

Session III – Special Techniques (Section “H”)

Session III focused on **dynamic strengthening, core stability, spinal mobility, coordination, and endurance**. The practices were more intensive compared to Session II and were designed to improve functional strength, flexibility, and neuromuscular control.

1. Warm-up Exercises

The session began with **warm-up exercises** to loosen joints and muscles and to prepare the body for fast and strength-oriented movements.

Purpose:

- ✓ Prevents muscle strain
- ✓ Improves blood circulation
- ✓ Prepares the nervous system for dynamic practices

2. Upavishta Konasana (Chakki Chalana)

Performed in the seated position with circular movements of the arms and trunk.

Benefits:

- ✓ Activates abdominal muscles
- ✓ Improves hip and lower back flexibility
- ✓ Enhances digestion
- ✓ Improves coordination

3. Bhujangasana

Bhujangasana was practiced to strengthen the spine and counterbalance forward-bending and strengthening practices.

Benefits:

- Strengthens spinal muscles
- Improves posture
- Expands chest and lungs
- Relieves spinal stiffness

4. Dynamic Asana Sequence

Bhujangasana – Adho Mukha Svanasana – Ashtanga Pranipadasana were practiced as **fast movements**.

Benefits:

- ✚ Builds muscular strength
- ✚ Improves coordination and stamina
- ✚ Enhances cardiovascular response
- ✚ Activates multiple muscle groups

5. Adho Mukha Svanasana (Opposite Leg Crossing Inside)

This variation involved crossing opposite legs while holding the posture.

Benefits:

- Improves balance and stability
- Strengthens shoulders and legs
- Enhances spinal alignment
- Improves neuromuscular control

6. Pada Prasarana Asana (Fast Leg Stretching – Both Legs)

Both legs were stretched alternately in a fast rhythm.

Benefits:

- ❖ Strengthens hip flexors and thigh muscles
- ❖ Improves flexibility of lower limbs
- ❖ Enhances circulation in legs

7. Makarasana – Lumbar Zig-Zag Movement

Performed in prone position with controlled zig-zag movements of the lumbar region.

Benefits:

- ✓ Relaxes lumbar spine
- ✓ Reduces lower back stiffness
- ✓ Improves spinal mobility

8. Cycling (Single and Double Leg)

Cycling movements were performed using single leg and both legs.

Benefits:

- ✓ Strengthens abdominal and leg muscles
- ✓ Improves coordination

- ✓ Enhances core stability

9. Plank Pose (60 Counts)

Plank was held for **60 counts** to develop endurance.

Benefits:

- ✚ Strengthens core muscles
- ✚ Improves shoulder and arm strength
- ✚ Enhances overall body stability

10. Crunch Sit-Ups (20 Repetitions)

Crunches were practiced to strengthen abdominal muscles.

Benefits:

- Improves core strength
- Supports spinal stability
- Enhances posture

11. Shalabhasana

Shalabhasana was performed to strengthen the posterior chain muscles.

Benefits:

- Strengthens lower back and gluteal muscles
- Improves spinal tone
- Balances anterior and posterior muscle groups

12. Deep Relaxation Technique (DRT)

The session concluded with **Deep Relaxation Technique** to allow complete recovery.

Benefits:

- Relaxes muscles and nervous system
- Reduces fatigue
- Enhances mind–body awareness

Overall Outcome of Session III

Session III effectively enhanced **strength, endurance, flexibility, coordination, and spinal stability**. The combination of fast movements and relaxation helped in improving physical fitness while preventing excessive strain.

5:00 PM – 6:00 PM: Evening Snacks

Light refreshments were provided.

6:00 PM – 6:30 PM: Bhajans

Evening bhajans were conducted, creating a peaceful and devotional environment.

6:40 PM – 7:40 PM: Trāṭaka and Cyclic Meditation

A guided session of **Trāṭaka and Cyclic Meditation (CM)** was conducted, helping improve concentration, emotional stability, and deep relaxation.

Trataka:

Steps of Trāṭaka Practice

5. Preparation and Relaxation

Sit comfortably on a chair or on the floor with the spine erect. Relax the body and mind, and begin the practice by chanting **Omkāra** to create a calm and focused mental state.

6. Eye Movement Exercises

Gently perform eye movements to prepare the eyes:

- ✓ Move the eyes from **left to right**
- ✓ Move the eyes **up and down**
- ✓ Perform **eyeball rotations** slowly in both directions

6. Palming and Gazing

Close the eyes and rub the palms together to generate warmth. Gently place the palms over the closed eyes without applying pressure. Slowly remove the palms, open the eyes, and begin gazing steadily at the **Dīpa or Jyothi (candle flame)**.

7. Position of the Candle

The candle should be placed at a distance of approximately **five feet** from the practitioner and positioned at the **same height as the eyes** to ensure comfortable and steady gazing.

Benefits of Trāṭaka

- ✓ Improves concentration and memory
- ✓ Enhances eye strength and visual coordination
- ✓ Reduces stress, anxiety, and mental restlessness
- ✓ Prepares the mind for deeper meditation

Trāṭaka – Precautions and Contraindications

Precautions:

- ✚ Practice Trāṭaka in a calm, well-ventilated, and dimly lit room.
- ✚ Gazing should be gentle; avoid straining or forcing the eyes.
- ✚ Keep the candle flame steady and practice for a short duration initially.

Contraindications:

- Should be avoided in conditions such as severe eye disorders, glaucoma, cataract, or recent eye surgery.
- Not recommended during acute headache, migraine, or eye infections

Cyclic Meditation (CM)

Is a guided yogic relaxation practice that involves **alternating phases of stimulation and relaxation**, helping to achieve deep physical, mental, and emotional rest. This technique is widely used at **SVYASA Arogyadhama** as part of the **Integrated Approach of Yoga Therapy (IAYT)** to reduce stress, enhance awareness, and balance the autonomic nervous system.

According to the practice followed, **Cyclic Meditation consists of three relaxation techniques**:

- ✓ IRT – Instant Relaxation Technique
- ✓ QRT – Quick Relaxation Technique
- ✓ DRT – Deep Relaxation Technique

1. Instant Relaxation Technique (IRT)

The practice begins with the participant **lying down on the mat in supine position**. One round of **Ākāra chanting** is performed to initiate relaxation.

- Awareness is brought to the **legs and hands**, and participants are instructed to **tighten the muscles gently while inhaling**.
- Tension is applied sequentially to **toes, knees, calf muscles, thighs, waist, arms, and palms**.
- After holding the tension for a few seconds, the muscles are **completely relaxed with exhalation**.

This immediate tightening and releasing of muscles helps to **quickly release physical stiffness and mental restlessness**. This phase is referred to as **IRT**.

2. Stimulating Postures (Dynamic Phase)

After IRT, participants **stand up** and perform gentle dynamic movements:

- 🌈 **Forward bending posture** is performed, ensuring the stretch is felt in the upper part of the body and legs.
- 🌈 The posture is maintained for a few seconds with awareness on pressure and stretch.
- 🌈 Participants then **bend backward**, applying gentle pressure and returning to the neutral position.
- 🌈 **Ākāra chanting** is done while returning to the standing position.

Next, **side bending movements** are practiced on both sides, applying pressure on one side of the body at a time.

This phase includes movements similar to **Ardha Chakrasana**, performed slowly and mindfully.

These movements provide **controlled stimulation**, activating muscles and internal organs before relaxation.

3. Quick Relaxation Technique (QRT)

After completing the stimulating postures, participants **lie down again on the mat.**

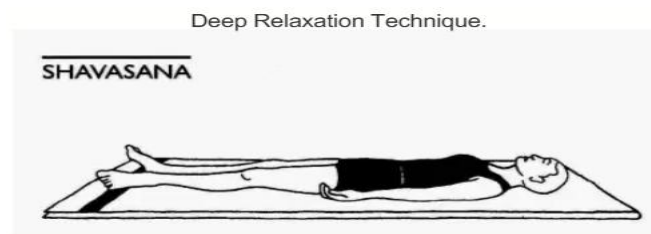

- Eyes are gently closed.
- Attention is brought to the **natural flow of breath.**
- Awareness is focused on the **abdominal movement**, where the abdomen rises like a mountain during inhalation and falls during exhalation.
- The breath is observed calmly for a few rounds.

Participants are then guided to observe breathing by **placing the index finger near the nostrils**, noticing:

- ✓ Cool air while inhaling
- ✓ Warm air while exhaling

After this mindful observation of breath, **Makāra chanting** is performed, leading to mental calmness. This phase is known as **QRT**.

4. Deep Relaxation Technique (DRT)

Practice

Lie down comfortably on your back in **Śavāsana**, keeping the legs slightly apart and arms relaxed away from the body. Close the eyes gently and allow the breath to flow naturally. Become aware of the body and consciously release all physical and mental tension.

Step 1: Relaxation of the Lower Part of the Body (Ākāra)

Bring your awareness to the **lower part of the body.**

- ✓ Focus on the **tips of the toes**, gently move them and relax.
- ✓ Feel relaxation spreading through the **soles of the feet and ankle joints.**
- ✓ Relax the **calf muscles** and gently pull up the kneecaps; release and relax.
- ✓ Shift awareness to the **thigh region** and feel the relaxation in the thigh muscles.
- ✓ Loosen the **buttock muscles and hip joints**, allowing them to relax completely.
- ✓ Bring awareness to the **pelvic region and waist** and relax totally.

Mentally affirm **R...E...L...A...X.**

To deepen relaxation in the lower part of the body, chant **Ākāra (A...A...A)** and feel the vibrations spreading through the legs, pelvis, and lower abdomen.

Step 2: Relaxation of the Middle Part of the Body (Ūkāra)

Slowly shift your awareness to the **middle part of the body.**

- Observe the **movement of the abdomen** for a few seconds and relax the abdominal muscles.
- Relax the **chest muscles** and feel the breath becoming smooth and effortless.
- Bring awareness to the **lower back**, relaxing the muscles around the spine.
- Gradually relax the **middle and upper back muscles**.
- Completely relax the **shoulder blades**.

Now shift attention to the **hands**:

- ✓ Sensitize and relax the **tips of the fingers** one by one.
- ✓ Relax the **palms**, loosen the **wrist joints**, and relax the forearms.
- ✓ Relax the **elbow joints, biceps, and triceps**.
- ✓ Allow the **shoulders** to drop and relax completely.

Bring awareness to the **neck region**, feel the relaxation around the neck muscles.

Slowly move the head **gently to the left and right**, then bring it back to the center.

Mentally affirm **R...E...L...A...X**.

To enhance relaxation of the middle part of the body, chant **Ūkāra (U...U...U)** and feel the vibrations spreading through the abdomen, chest, back, arms, and neck.

Step 3: Relaxation of the Upper Part of the Body (Makāra)

Now shift your awareness to the **upper part of the body**.

- ✓ Relax the cheeks and chin muscles.
- ✓ Feel relaxation in the lower and upper jaw, teeth, gums, and lips.
- ✓ Relax the soft and hard palate, throat, and vocal cords.
- ✓ Bring awareness to the nose, eyes, eyelids, eyebrows, and forehead, and relax them completely.
- ✓ Relax the temples, scalp, and the top of the head.

Allow the entire head region to become completely relaxed and still.

To deepen relaxation in the upper part of the body, chant **Makāra (M...M...M)** and feel the soothing vibrations in the face, throat, and head region.

Completion

Experience the **total relaxation of the entire body** from toes to head.

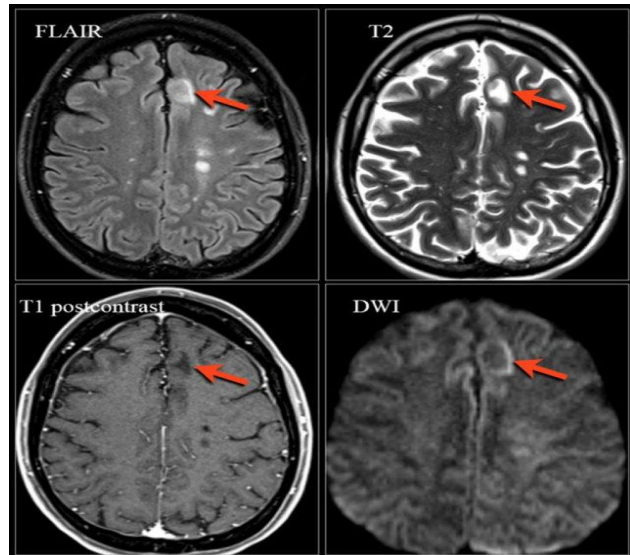

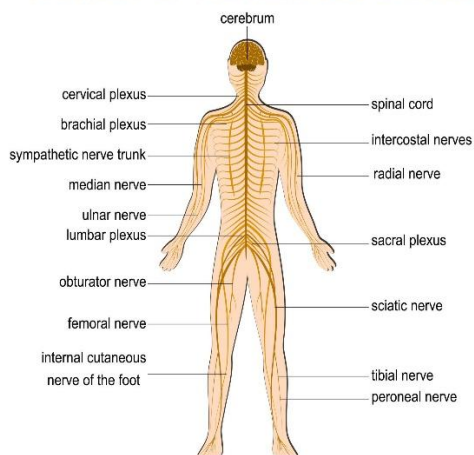

Remain in this state of deep rest and awareness for a few moments, observing the calmness and stillness within.

The practice may be concluded with a gentle **Omkāra chanting** followed by a **Śānti Mantra**, allowing the mind and body to return gradually to normal awareness.

Benefits of Cyclic Meditation

- ✓ Deep physical and mental relaxation
- ✓ Reduction of stress and anxiety
- ✓ Improved autonomic balance
- ✓ Enhanced awareness and concentration
- ✓ Supportive in psychosomatic and lifestyle disorders

ANATOMY OF THE NERVOUS SYSTEM

Overview

Neurology focuses on disorders related to:

- ✓ Brain
- ✓ Spinal cord
- ✓ Peripheral nerves
- ✓ Neuromuscular system

Common Conditions Observed

- Stroke (CVA – Cerebrovascular Accident)
- Parkinson's disease
- Multiple Sclerosis
- Epilepsy
- Migraine
- Neuropathy
- Cervical and lumbar spondylosis

Symptoms Seen in Participants

- ✓ Muscle weakness
- ✓ Loss of coordination
- ✓ Tremors
- ✓ Paralysis (Hemiplegia/Paraplegia)
- ✓ Slurred speech
- ✓ Memory disturbances
- ✓ Headache and dizziness

Yogic Management Approach

As a yoga therapy intern, focus was on:

Asanas (Gentle & Supportive)

- ❖ Pawanamuktasana series (joint loosening)

- ❖ Tadasana (with support)
- ❖ Vakrasana (mild spinal twist)
- ❖ Modified Bhujangasana
- ❖ Chair-based movements for paralyzed participants

Pranayama

- ✓ Abdominal breathing
- ✓ Nadi Shuddhi
- ✓ Bhramari
- ✓ Sectional breathing

Relaxation Techniques

- ✓ DRT (Deep Relaxation Technique)
- ✓ MSRT (Mind Sound Resonance Technique)
- ✓ Om chanting

Benefits of Yoga in Neurology

- Improves neuroplasticity
- Enhances coordination
- Reduces tremors
- Improves balance
- Reduces anxiety & depression
- Improves sleep quality

Given your interest in **chitta shuddhi and pranayama philosophy**, neurology participants beautifully show how prana imbalance directly reflects in the nervous system.

Oncology Department

Oncology deals with:

- Diagnosis
 - Treatment
 - Rehabilitation
- of cancer participants.

Types of Cancer Commonly Seen

- ✓ Breast cancer
- ✓ Cervical cancer
- ✓ Lung cancer
- ✓ Colon cancer
- ✓ Prostate cancer
- ✓ Blood cancers (Leukemia)

Symptoms Observed

- Fatigue
- Weight loss
- Pain
- Nausea (due to chemotherapy)
- Emotional distress

- Sleep disturbances

Integrative Yoga Therapy Role

Yoga therapy in oncology is **supportive and rehabilitative**, not curative.

Gentle Practices

- ✚ Chair yoga
- ✚ Supported Shavasana
- ✚ Gentle stretching
- ✚ Restorative poses

Pranayama

- ❖ Deep abdominal breathing
- ❖ Nadi Shuddhi
- ❖ Bhramari
- ❖ Chandra Anuloma

Mind-Body Practices

- Guided relaxation
- Yoga Nidra
- OM meditation
- Positive sankalpa

Benefits Observed

- ✓ Reduces chemotherapy side effects
- ✓ Improves immunity markers (long term)
- ✓ Reduces stress hormone levels
- ✓ Enhances emotional resilience
- ✓ Improves quality of life

For oncology participants especially, the role of **acceptance, surrender, and inner strength** becomes central — something very aligned with yogic philosophy.

Learning Outcome from A Section

- ✓ Understood the importance of individualized yoga therapy
- ✓ Learned precautions in neurological limitations
- ✓ Observed psychological impact of chronic illness
- ✓ Recognized the importance of slow, mindful breathing practices
- ✓ Understood interdisciplinary coordination (Doctors, Physiotherapists, Yoga therapists, Nurses)

Time: 5:20AM to 6:00AM

ॐकार (Omkāra)

Meaning:

Om is the primordial sound symbolizing universal consciousness, peace, and harmony.

भद्रं कर्णेभिः (Bhadram Karṇebhiḥ)

ॐ भद्रं कर्णेभिः शृणुयाम देवाः ।
भद्रं पश्येमाक्षभिर्यजत्राः ।
स्थिरैरङ्गैस्तुष्टुवांसस्तनूभिः ।
व्यशेम देवहितं यदायुः ॥
ॐ शान्तिः शान्तिः शान्तिः ॥

Meaning:

May we hear what is auspicious, may we see what is noble, and may we live a healthy and purposeful life in the service of higher good. May peace prevail at all levels.

प्रातः स्मरामि (Prātaḥ Smarāmi)

प्रातः स्मरामि हृदि संस्फुरदात्मतत्त्वं
सच्चित्सुखं परमहंसगतिं तुरीयम् ।
यत्स्वप्नजागरसुषुप्तिमवैति नित्यं
तद्ब्रह्म निष्कलमहं न च भूतसङ्घः ॥

Meaning:

At dawn, I meditate upon the Supreme Reality shining in the heart, which is pure existence, consciousness, and bliss, beyond the states of waking, dream, and deep sleep.

ॐ ध्यान (Om Meditation)

ॐ शान्तिः शान्तिः शान्तिः ॥

Meaning:

Invocation of peace at the physical, mental, and spiritual levels.

OMKĀRA PRACTICE WITH PREPARATORY PRĀṆĀYĀMA

Introduction

Omkāra is considered the primordial sound and the foundation of all yogic practices. In the yogic tradition, Om represents the universal consciousness and serves as a powerful tool for mental purification, concentration, and spiritual elevation. At SVYASA Arogyadhama, Omkāra practice is systematically incorporated into daily therapeutic and meditative routines as part of the **Integrated Approach of Yoga Therapy (IAYT)**.

During the internship training, Omkāra practice was conducted **after the recitation of Prātaḥ Smarāmi śloka**, to facilitate internalization, mental calmness, and readiness for higher yogic practices. The practice integrates prāṇāyāma, visualization, and meditation, ensuring holistic benefits at physical, mental, and emotional levels.

Posture and Initial Preparation

The practice begins by sitting in a comfortable meditative posture such as **Vajrāsana** or **Sukhāsana**. The spine is maintained erect, shoulders relaxed, and the head aligned with the spine. Hands rest comfortably on the thighs. The eyes are gently closed, and the body is consciously relaxed. Awareness is brought to the natural flow of breath, creating a state of preparedness for the prāṇāyāma practices that follow.

Preparatory Prāṇāyāma Practices

1. Kapālabhāti Prāṇāyāma

Kapālabhāti is practiced as the initial cleansing technique to stimulate the abdominal organs and purify the respiratory passages.

- The practice is performed in **slow, medium, and fast rounds**, depending on individual capacity.
- Emphasis is placed on forceful exhalation with passive inhalation.
- After completion of the rounds, the practitioner relaxes with **normal inhalation and exhalation**.
- This relaxation phase is followed by chanting **one Omkāra**, allowing the breath and mind to stabilize.

Therapeutic significance:

Kapālabhāti improves digestion, enhances lung capacity, removes lethargy, and prepares the mind for deeper concentration.

2. Abdominal Breathing

Abdominal breathing is practiced for **six rounds**.

- ✓ During inhalation, the abdomen gently expands.
- ✓ During exhalation, the abdomen contracts smoothly.
- ✓ The breath remains slow, rhythmic, and effortless.

Therapeutic significance:

This practice calms the nervous system, reduces stress, and improves awareness of diaphragmatic breathing.

3. Nāḍī Śōdhana Prāṇāyāma

Nāḍī Śōdhana Prāṇāyāma is practiced for **six rounds**.

- Alternate nostril breathing is performed in a relaxed and steady manner.

- Equal attention is given to inhalation and exhalation without breath retention.

Therapeutic significance:

Nāḍī Śodhana balances the autonomic nervous system, purifies energy channels, enhances emotional balance, and improves mental clarity.

4. Bhrāmarī Prāṇāyāma

Bhrāmarī Prāṇāyāma is practiced for **six rounds**.

- ✓ Inhalation is slow and deep.
- ✓ During exhalation, a gentle humming sound is produced.
- ✓ Awareness is maintained on the vibration felt in the head and facial region.

Therapeutic significance:

Bhrāmarī reduces anxiety, calms mental fluctuations, relieves stress, and prepares the mind for meditation.

After completing all prāṇāyāma practices, the practitioner remains still for a few moments, allowing the breath to return to its natural rhythm.

Omkāra Dhyāna (Meditation on Om)

External Observation of Omkāra

The practitioner gently opens the eyes and begins observing the **Omkāra symbol** placed in front.

- ✓ Initially, attention is focused on the **mid-point of the Omkāra**.
- ✓ Awareness is then slowly shifted to the **upper point (Bindu)**.
- ✓ Finally, the entire Omkāra form is observed as a complete symbol.

This visual observation enhances concentration and reduces external distractions.

Internal Visualization

After external observation:

The eyes are gently closed.

The practitioner visualizes the complete Omkāra internally.

- ✓ The image is observed at the space **between the two eyebrows (Bhrūmadhya / Ājñā Chakra)**.

If the image is not clearly perceived initially:

- ✓ The eyes are gently opened.
- ✓ The Omkāra is observed again externally.
- ✓ The eyes are closed and internal visualization is continued.

This process is repeated participantly without strain or effort.

Subtle Awareness and Absorption

As the practice deepens:

- ✓ The practitioner begins to perceive the **rays, glow, and radiance** of the Omkāra.
- ✓ Awareness gradually becomes subtle and internalized.
- ✓ Mental fluctuations reduce, leading to a state of calm alertness.

The practice is continued for **a few minutes**, allowing the mind to merge with the symbol of Om.

Relaxation Phase

After visualization:

- ✓ The practitioner remains seated quietly.
- ✓ Breath flows naturally without control.
- ✓ Awareness rests in the calmness and stillness generated by the practice.

This phase allows integration of the physiological and psychological benefits of Omkāra meditation.

Concluding Śānti Mantra

The practice is concluded with the chanting of the peace mantra:

सर्वे जनाः सुखिनो भवन्तु ।
सर्वे सन्तु निरामयाः ।
सर्वे भद्राणि पश्यन्तु ।
मा कश्चिद् दुःखभाग्भवेत् ।
ॐ शान्तिः शान्तिः शान्तिः ॥

Meaning:

May all beings be happy, may all be free from illness, may all experience auspiciousness, and may none suffer. May peace prevail at all levels.

Conclusion

Omkāra practice combined with preparatory prāṇāyāma forms an essential component of yogic therapy at SVYASA Arogyadhama. The systematic progression from breath regulation to visualization and meditation facilitates deep relaxation, emotional balance, and heightened awareness. This practice plays a significant role in stress management, psychosomatic healing, and spiritual growth, making it a valuable therapeutic tool in yoga therapy training.

07th February – Special Techniques Session

Time: 6:00 AM – 6:55 AM

Place: A Section – Neurology & Oncology

Institute: S-VYASA

Kriya Practices

JALA NETI

Meaning of Jala Neti

- ✓ **Jala** = water
- ✓ **Neti** = nasal cleansing

Jala Neti is a yogic cleansing practice (Shatkarma) in which **lukewarm saline water** is passed through the nostrils to cleanse the nasal passages.

Requirements (Materials Needed)

- ✓ Neti pot / Neti lota
- ✓ Lukewarm water
- ✓ Rock salt (saindhava lavana)

Saline Preparation:

- ✚ Add ½ teaspoon of salt to ½ liter of lukewarm water
- ✚ Water should taste similar to tears (neither salty nor plain)

Position

- ❖ Stand in **Kagasana** (squat) or lean forward slightly
- ❖ Keep the body relaxed
- ❖ Breathe through the mouth throughout the practice

Step 1: Preparation

- ✓ Fill the neti pot with saline water
- ✓ Ensure the water temperature is comfortable (lukewarm)

Step 2: Head Position

- ✓ Bend forward slightly
- ✓ Tilt the head to the **right side**
- ✓ Insert the nozzle gently into the **left nostril**

Step 3: Flow of Water

- ✚ Keep the mouth open and breathe normally through the mouth
- ✚ Allow water to flow from the **left nostril → out through the right nostril**
- ✚ Do not sniff, inhale, or swallow the water

Step 4: Change the Side

- ✓ Remove the pot
- ✓ Tilt the head to the **left side**
- ✓ Insert the nozzle into the **right nostril**
- ✓ Let the water flow out through the left nostril

Step 5: Completion

- ✓ After both sides are done, stand upright
- ✓ Bend forward slightly and gently blow out the remaining water from both nostrils

Step 6: Drying the Nose

- ✚ Perform Kapalabhati (mild) or forceful exhalation
- ✚ Do 10–20 gentle rounds
- ✚ Ensure no water remains in the nasal passages

Duration & Frequency

Time: 3–5 minutes

Frequency:

- c. Daily for sinus/allergy problems
- d. 2–3 times a week for general cleansing

BENEFITS OF JALA NETI

- ✓ Cleans nasal passages and sinuses
- ✓ Improves breathing capacity
- ✓ Prevents sinusitis, rhinitis, and allergies
- ✓ Reduces cold, cough, and headache
- ✓ Enhances concentration and mental clarity
- ✓ Prepares the body for pranayama and meditation

PRECAUTIONS

- ❖ Water must be lukewarm and saline
- ❖ Never practice with plain or cold water
- ❖ Do not force the water flow
- ❖ Always dry the nose properly after practice

CONTRAINDICATIONS

- Active nose bleeding (epistaxis)
- Severe sinus infection
- Recent nasal surgery
- Deviated nasal septum (without guidance)

Therapeutic Application

- ✓ Sinusitis
- ✓ Allergic rhinitis
- ✓ Asthma (as supportive therapy)
- ✓ Migraine (related to sinus congestion)
- ✓ Upper respiratory infections

VAMANA DHAUTI (KUNJAL KRIYA)

Meaning

- ✓ **Vamana** = vomiting
- ✓ **Dhauti** = cleansing

Vamana Dhauti, also known as **Kunjal Kriya**, is a yogic cleansing technique in which **lukewarm saline water is voluntarily expelled through the mouth** to cleanse the stomach and upper digestive tract.

Requirements

- ✓ 1.5 to 2 liters of **lukewarm water**
- ✓ **Rock salt** (Saindhava lavana)

Saline Preparation:

- ✓ Add **1–2 teaspoons of salt** to 1.5–2 liters of water
- ✓ Water should taste slightly salty (similar to sea water)

Time of Practice

- Early morning
- **Empty stomach**
- After bowel evacuation

STEP-BY-STEP PROCEDURE

Step 1: Preparation

- ✓ Sit in Kagasana (squatting position) or stand comfortably
- ✓ Relax the body and mind

Step 2: Drinking Water

- ✓ Drink the saline water continuously without gaps
- ✓ Drink until the stomach feels completely full
- ✓ Do not sip slowly; drink steadily

Step 3: Inducing Vamana

- ✚ Lean forward
- ✚ Insert **two fingers** (index and middle) gently into the throat
- ✚ Lightly stimulate the tongue root
- ✚ Water will come out forcefully through the mouth

Step 4: Complete Emptying

- ✓ Continue until most of the water is expelled
- ✓ The water should come out clean at the end

Step 5: After Practice

- ✚ Wash the mouth thoroughly
- ✚ Sit quietly for a few minutes
- ✚ Practice **deep breathing or relaxation**

Duration & Frequency

Time: 5–10 minutes

Frequency:

- Once a week (general cleansing)
- Only under expert guidance for therapeutic use

BENEFITS OF VAMANA DHAUTI

- ✓ Cleanses the stomach and food pipe
- ✓ Removes excess **Kapha dosha**
- ✓ Improves digestion and appetite
- ✓ Relieves acidity, gas, and bloating
- ✓ Beneficial in asthma, bronchitis, and allergies
- ✓ Reduces heaviness and lethargy

PRECAUTIONS

- ❖ Must be practiced only on an empty stomach
- ❖ Water should be lukewarm and saline
- ❖ Do not strain or force vomiting
- ❖ Always learn under a qualified yoga therapist

CONTRAINDICATIONS

- Heart disease
- High blood pressure
- Hernia
- Peptic ulcer
- Pregnancy
- Recent surgery
- Severe weakness

Therapeutic Applications

- Hyperacidity
- GERD
- Asthma (Kapha-dominant)
- Chronic cough
- Indigestion

LAGHU SHANKHA PRAKSHALANA (LSP)

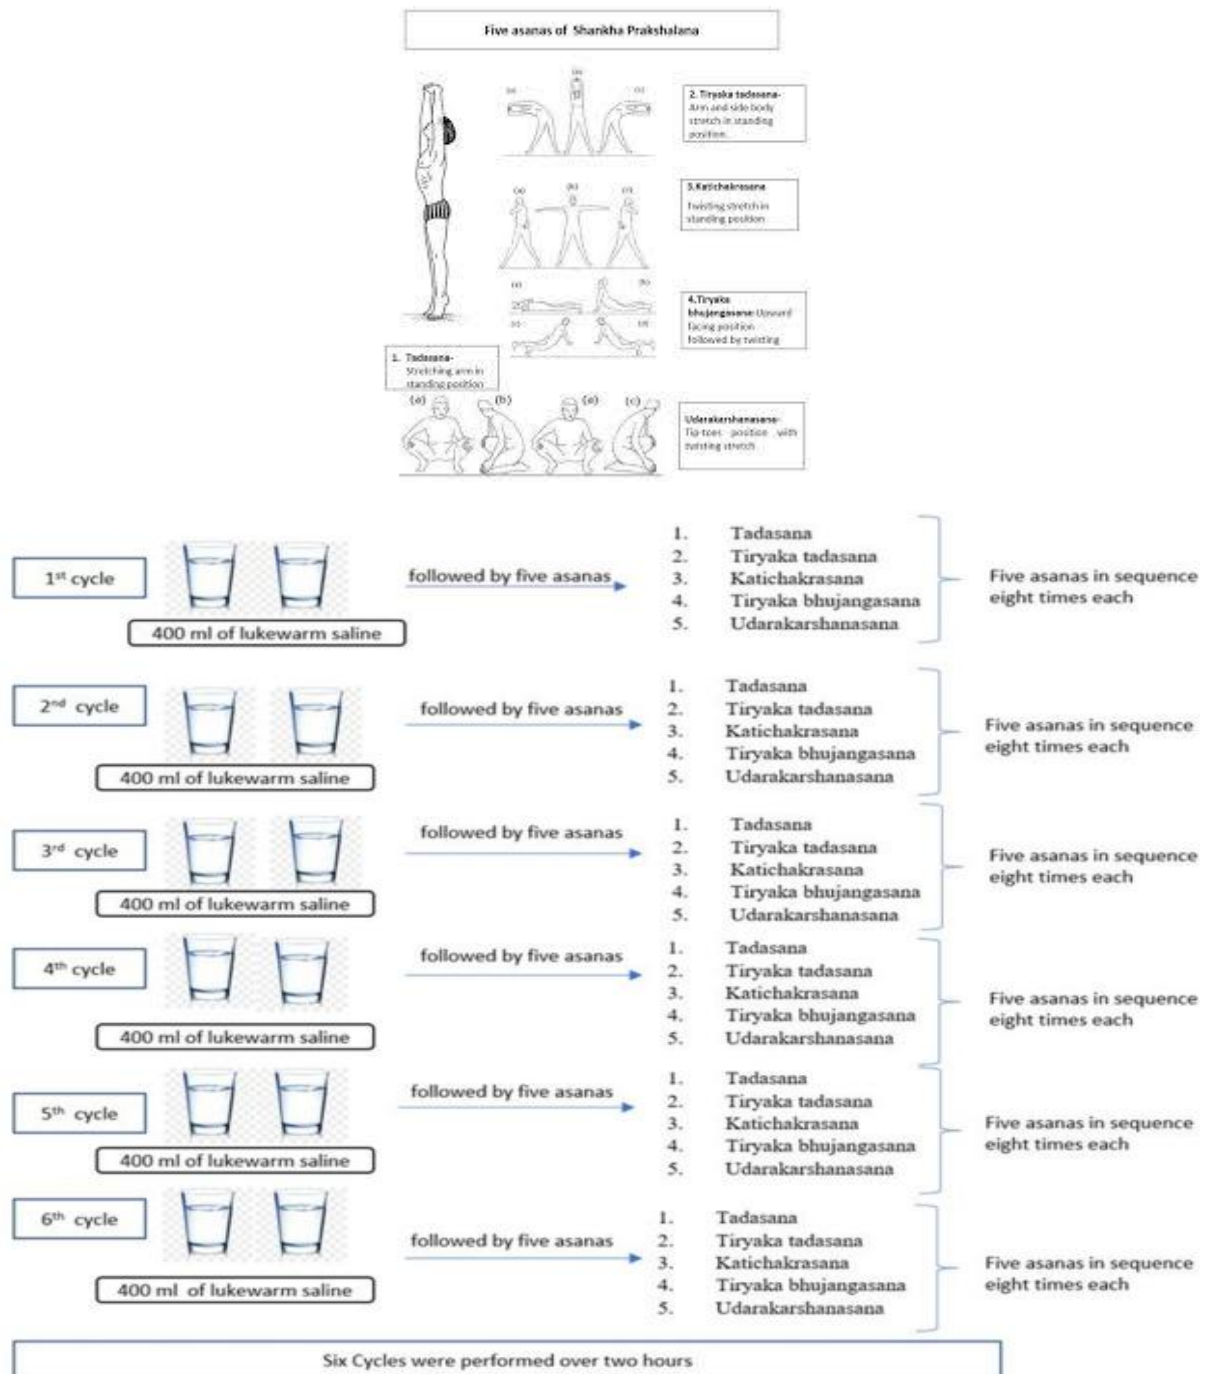

Meaning

Laghu = light / short

Shankha = conch (intestine resembles a conch shell)

Prakshalana = washing / cleansing

Laghu Shankha Prakshalana is a mild yogic intestinal cleansing practice in which **lukewarm saline water** is taken along with **specific yoga asanas** to cleanse the intestines.

Time & Preparation

- ✓ Early morning
- ✓ **Empty stomach**
- ✓ After bowel evacuation
- ✓ Practice in a calm environment

Requirements

- ✓ 1 to 1.5 liters of **lukewarm water**
- ✓ Rock salt (Saindhava lavana)

Saline Preparation:

- ✚ Add ½ teaspoon of salt to 1 liter of water
- ✚ Water should taste mildly salty (not plain, not too salty)

STEP-BY-STEP PROCEDURE

Step 1: Drink Saline Water

- Drink **2 glasses** of lukewarm saline water
- Drink continuously, not slowly sipping

Step 2: Perform the 5 Asanas (8–10 times each)

Tadasana

- ✓ Stretches the body upward
- ✓ Helps water move downward

Hand Stretch and Toe Release

- ✓ **Description:**
Stretching the fingers, palms, and toes followed by relaxation.

Tiryaka Tadasana

- Side bending posture
- Helps water move through intestines

Kati Chakrasana

- ❖ Twisting posture
- ❖ Facilitates intestinal movement

Tiryaka Bhujangasana

- ✓ Twisting cobra pose
- ✓ Helps water pass through the small intestine

Udarakarshanasana

- Abdominal squeezing posture
- Pushes water into the large intestine

Step 3: Repeat the Cycle

- ✓ Again drink 2 glasses of saline water
- ✓ Repeat the 5 asanas
- ✓ Continue this cycle 2–3 times

Step 4: Bowel Evacuation

- ❖ You will feel the urge to pass stools
- ❖ Go to the toilet and evacuate naturally
- ❖ Do not strain

Step 5: Completion

- Stop when evacuation becomes light / watery
- Rest in **Shavasana** for 10–15 minutes

Duration & Frequency

Time: 30–45 minutes

Frequency:

- Once in 15 days or once a month
- Only under guidance for therapeutic use

BENEFITS

- ✓ Cleanses intestines gently
- ✓ Improves digestion and metabolism
- ✓ Relieves constipation and gas
- ✓ Reduces acidity and bloating
- ✓ Removes toxins (Ama)
- ✓ Improves gut health
- ✓ Balances Kapha and Pitta

PRECAUTIONS

- ✚ Water must be lukewarm and saline
- ✚ Perform asanas gently, without strain
- ✚ Do not overdo water intake
- ✚ Always rest after completion

CONTRAINDICATIONS

- Peptic ulcer
- Hernia
- Intestinal obstruction
- Severe back pain
- Pregnancy
- Recent abdominal surgery
- Severe weakness

Therapeutic Applications

- Chronic constipation
- Indigestion
- IBS (under guidance)
- Acidity
- Sluggish bowel movement

Conclusion of Kriya Session

The kriya session was completed systematically with proper guidance and awareness of breath. All cleansing practices were performed with attention to posture, relaxation, and safety precautions. Participants reported a feeling of lightness, improved breathing, and mental clarity after the practices.

7:00AM to 08:00AM – Maitri Milan

Maitri Milan was conducted as a **group spiritual session**, promoting emotional bonding and mental positivity. The session included:

The session began with the chanting of **Ganesha Stotra**, invoking auspiciousness and the removal of obstacles, followed by **Dakshinamurthy Stotram**, which signifies the principle of the Guru and supreme knowledge.

This was followed by the recitation of the **Pratah Smarami Sloka**, cultivating gratitude and right orientation at the beginning of the session.

Selected verses from the **Bhagavad Gita** were then chanted, reinforcing values of dharma, self-awareness, and balanced living.

ಶ್ರೀ ಕೃಷ್ಣಾರ್ಪಣಮಸ್ತು

8:00 AM – 9:00 AM: Breakfast

A **sattvic breakfast** was served, supporting digestion and aligning with yogic dietary principles followed at Arogyadhama.

9:00AM to 9:55AM Parameters

Date: 7th February 2026

Section: -A-Section

Place: SVYASA Arogyadhama

Case Study: 1

Participant Profile

Name: *****

Age/Gender: 60 years / Male

Occupation: Not specified

Date of Admission: 27/01/2026

Date of Discharge: 03/02/2026

Diagnosis (As per Medical Record)

- ✓ Hepatitis B
- ✓ Carcinoma Stomach (Post surgery & chemotherapy)
- ✓ Functional Constipation
- ✓ Insomnia

Chief Complaints

- ❖ Occasional cough since 3–4 months
- ❖ Difficulty falling asleep (2–3 years)
- ❖ Tiredness & weakness (2–3 years)
- ❖ Unsatisfactory bowel movements (2 years)
- ❖ Bloating sensation (2 years)
- ❖ Fear & increased stress (2–3 years)
- ❖ Occasional stomach & middle back pain

History of Present Illness

- ✚ Underwent stomach surgery in December 2024.
- ✚ Received 4 cycles of chemotherapy.
- ✚ Later underwent PET scan (June 2025) – clear.
- ✚ Half-dose chemotherapy continued (8 sessions).
- ✚ Known case of Hepatitis B (7–8 years).
- ✚ Developed chronic fatigue, constipation, sleep disturbances post treatment.

Past History

- ✓ Carcinoma stomach (operated)
- ✓ Hepatitis B (chronic)
- ✓ Chemotherapy exposure
- ✓ No major family history except mother – Diabetes

General Physical Examination

Parameter	Observation
Pulse Rate	78–83 bpm
Blood Pressure	~100–110 / 60–70 mmHg
Respiratory Rate	16–18/min
BMI	18.15 kg/m ² (Underweight)
Height	165 cm
Weight	~48 kg

Investigations

- ✓ CA 19-9
- ✓ HbA1c – 6.1%
- ✓ Serum Iron – 46
- ✓ TIBC – 251
- ✓ Transferrin saturation – 8.33%

Findings indicate:

- ✓ Nutritional compromise
- ✓ Possible iron deficiency
- ✓ Post-chemotherapy weakness

IAYT – Integrated Approach of Yoga Therapy

The participant underwent a structured IAYT module including:

A) Physical Module

- ✓ Sukshma Vyayama
- ✓ Loosening exercises
- ✓ Setu Bandhasana
- ✓ Shashankasana
- ✓ Marjariasana
- ✓ Leg raising practices

B) Pranayama

- Abdominal breathing
- Sectional breathing
- Nadi Shuddhi
- Bhramari
-

C) Special Techniques

- MSRT (Mind Sound Resonance Technique)
- PET
- Yoga Nidra
- Om Meditation

Yoga Therapy Rationale

For Oncology Recovery:

- ❖ Improve parasympathetic activation
- ❖ Reduce chemotherapy-related fatigue
- ❖ Enhance immune modulation

For Hepatitis B:

- ✓ Improve liver circulation
- ✓ Reduce stress-induced inflammatory response

For Constipation:

- ✓ Improve gut motility
- ✓ Regulate Apana Vayu

For Insomnia:

- ✓ Reduce hyperarousal
- ✓ Increase melatonin regulation

Naturopathy Management

- ✓ Mud packs (Abdominal region)
- ✓ Hydrotherapy
- ✓ Enema (if required for constipation)
- ✓ Sun exposure therapy

Purpose:

1. Detoxification
2. Improve bowel clearance
3. Enhance liver function

Diet Plan

Protein-rich diet prescribed

Likely included:

- ✓ Moong dal
- ✓ Vegetable soups
- ✓ Ragi / millets
- ✓ Fresh fruits
- ✓ Steamed vegetables
- ✓ Avoid spicy & processed foods

Purpose:

- Improve BMI

- Restore iron levels
- Support liver function
- Enhance immunity

Progress During Stay

- ✓ Sleep improved
- ✓ Bowel movements became regular
- ✓ Reduction in bloating
- ✓ Reduced anxiety
- ✓ Improved appetite

Discharge Summary

Condition at Discharge:

- Stable
- No fresh complaints
- Bowel clear
- Sleep sound
- PET scan clean

Advice:

- ✚ Continue pranayama daily
- ✚ Continue relaxation techniques
- ✚ Maintain protein-rich sattvic diet
- ✚ Follow-up periodically

Pancha Kosha Analysis (Optional Academic Addition)

Kosha	Disturbance	Therapy Applied
Annamaya	Weight loss, weakness	Asana, Diet
Pranamaya	Pranic imbalance	Nadi Shuddhi
Manomaya	Fear, stress	MSRT, Yoga Nidra
Vijnanamaya	Emotional insecurity	Counseling
Anandamaya	Reduced wellbeing	Meditation

Conclusion

This case demonstrates that **Integrated Yoga Therapy (IAYT)** combined with naturopathy and diet regulation significantly improved:

- ✓ Sleep quality
- ✓ Bowel function
- ✓ Emotional stability
- ✓ Overall quality of life

Yoga acted as a supportive rehabilitative therapy in a post-oncology recovery case with chronic Hepatitis B.

Neurological Disorder with Right-Sided Paralysis – Direct observation

The participant is suffering from a neurological disorder presenting with **right-sided paralysis (hemiplegia)**, most likely due to a cerebrovascular accident (stroke) affecting the left hemisphere of the brain. As a result, motor control on the right side of the body is impaired.

Common Clinical Features Observed:

- ✓ Weakness or complete loss of movement in right upper and lower limbs
- ✓ Reduced muscle strength
- ✓ Impaired coordination
- ✓ Possible difficulty in balance
- ✓ Reduced functional independence

So we were regularly monitoring of clinical parameters like Blood Pressure (BP), Pulse Rate (PR), Respiratory Rate (RR), Oxygen Saturation (if required), Muscle strength grading etc., are essential to assess progress and safety during therapy.

Monitoring these parameters helps ensure:

- ✓ Safe participation in yoga therapy
- ✓ Prevention of overexertion
- ✓ Assessment of autonomic stability
- ✓ Tracking rehabilitation progress

10:00AM to 11:00PM Lecture

Topic: Annamaya Kosha & Pranamaya Kosha

Speaker: Basavaraj Sir

Venue: Arogyadhama

Introduction

The lecture focused on the concept of **Pancha Kosha** from Taittiriya Upanishad and its application in Yoga Therapy. The speaker emphasized understanding disease not merely at the physical level, but across multiple layers of human existence.

Special attention was given to:

- **Annamaya Kosha** (Physical Sheath)
- **Pranamaya Kosha** (Vital Energy Sheath)

Annamaya Kosha (Physical Body)

Definition:

Annamaya Kosha is the outermost sheath composed of food (Anna). It represents the gross physical body made up of:

- Muscles
- Bones
- Organs
- Tissues
- Blood

It is sustained and nourished by food.

Key Points Explained:

- “As the food, so the body.”
- Imbalance in diet leads to structural and metabolic disorders.
- Most modern diseases begin with lifestyle errors affecting this kosha.
- Improper digestion → toxin accumulation → disease manifestation.

Clinical Correlation (As Explained in Class)

In Arogyadhama cases:

- Cancer participants → weight loss, muscle wasting
- Neurology participants → muscle weakness
- Constipation → digestive imbalance

All these indicate disturbance at **Annamaya Kosha**.

Therapeutic Approach:

To correct Annamaya Kosha imbalance:

- Asana practice
- Proper diet (Sattvic, protein-rich when needed)
- Cleansing practices
- Physical activity

Yoga therapy first stabilizes this sheath.

Pranamaya Kosha (Vital Energy Sheath)

Definition:

Pranamaya Kosha is the layer composed of **Prana (life-force energy)** that governs physiological functions.

It includes:

- Five Pranas (Prana, Apana, Samana, Udana, Vyana)
- Energy flow through nadis

Key Concepts Explained:

- Disease first begins as pranic imbalance before becoming physical.
- Stress disturbs pranic flow.
- Blocked prana → organ dysfunction.
- Breath is the doorway to prana regulation.

Clinical Correlation:

In oncology & neurology participants:

- Fatigue → pranic depletion
- Anxiety → disturbed prana flow
- Insomnia → hyperactive Udana/Vyana imbalance
- Constipation → Apana Vayu disturbance

Thus, pranic imbalance precedes structural damage.

Therapeutic Correction:

To balance Pranamaya Kosha:

- Nadi Shuddhi
- Bhramari
- Sectional breathing
- MSRT
- Om chanting

Breath regulation restores autonomic balance.

Relationship Between Annamaya & Pranamaya Kosha

Basavaraj Sir emphasized:

- Annamaya is the gross expression.
- Pranamaya is the functional controller.
- If prana is disturbed → physical disease manifests.
- Correction should start from pranic level, not only physical level.

Application in Yoga Therapy

In Arogyadhama setting:

1. Physical symptoms treated through asana (Annamaya correction).
2. Breath techniques regulate prana (Pranamaya correction).
3. Relaxation reduces stress impact on both sheaths.

Integrated therapy ensures deeper healing.

Learning Outcome from Lecture

- Understood disease progression through kosha model.
- Realized importance of breath in clinical recovery.
- Gained clarity on applying kosha theory in cancer & neuro rehabilitation.
- Developed deeper appreciation for holistic approach of S-VYASA.

11:00 AM – 12:00 PM: Self-Study (Male Interns)

Male interns utilized this time for **self-study** by visiting the library and referring to:

- ✓ Yoga therapy theses
- ✓ Dissertations
- ✓ Yoga Itihasa
- ✓ Classical yogic texts

This session enhanced theoretical understanding and research orientation.

12:00PM to 1:00PM Special Technique/ PET

No session was conducted as they have no participants

1:00 PM – 2:00 PM: Lunch

A balanced **sattvic lunch** was provided, supporting digestive health and recovery.

2:00 PM – 2:30 PM: Rest

A short rest period was given to allow digestion and physical recovery.

2:30 PM – 3:10 PM: MSRT (Mind Sound Resonance Technique)

Mind Sound Resonance Technique (MSRT)

Introduction

Mind Sound Resonance Technique (MSRT) is a guided yogic relaxation practice that uses **sound, mantra, and awareness** to induce deep mental calmness and internal silence. The practice works on the principle that **sound vibrations resonate through the body and mind**, helping to release stress, balance emotions, and enhance inner awareness. MSRT is an integral component of the **Integrated Approach of Yoga Therapy (IAYT)**.

Procedure of MSRT

Step 1: Opening Prayer

The practice begins with a prayer for healing and well-being:

ॐ त्र्यम्बकं यजामहे सुगन्धिं पुष्टिवर्धनम् ।
उर्वारुकमिव बन्धनान् मृत्योर्मुक्षीय मामृतात् ॥
ॐ शान्तिः शान्तिः शान्तिः ॥

(Mrityunjaya Mantra)

This prayer invokes protection, nourishment, and freedom from suffering.

Step 2: A-U-M Chanting

a) Loud Chanting (Āhata Phase)

- 🎵 Loud chanting of **A, U, M**, and **AUM** is done for **3 rounds**.
- 🎵 Participants are instructed to **feel the resonance of sound throughout the body**, from head to toe.

b) Mental Chanting (Anāhata Phase)

- ✓ Chanting of **A, U, M**, and **AUM** is repeated **mentally for 3 rounds**.
- ✓ Awareness is maintained on the **subtle inner vibrations**, even without vocal sound.

Step 3: Mrityunjaya Mantra Chanting

a) Loud Chanting

The Mrityunjaya Mantra is chanted loudly for **3 rounds**:

ॐ त्र्यम्बकं यजामहे सुगन्धिं पुष्टिवर्धनम् ।
उर्वारुकमिव बन्धनान् मृत्योर्मुक्षीय मामृतात् ॥
ॐ शान्तिः शान्तिः शान्तिः ॥

Participants are guided to **feel the pattern of resonant waves spreading throughout the body**.

b) Mental Chanting (Anāhata)

- Mental chanting of the mantra (**MM, MM, MM**) is done for **3 rounds**.
- Resonance is felt internally at a deeper mental level.

Step 4: Anāhata AUM (9 Rounds)

- ✓ **AUM** is repeated mentally for **9 rounds**.
- ✓ Attention is placed on the **mind-level resonance**, experiencing vibrations spreading through the entire body.

Step 5: Ajapājapa AUM to Silence (9 Rounds)

- ❖ The natural flow of **AUM** is observed mentally without effort.
- ❖ The sound gradually **merges into silence**.
- ❖ Participants feel the resonance of OM rising and dissolving into stillness.

Step 6: Stay in Silence

Participants remain in **complete silence**, observing inner awareness without any sound or effort.

Step 7: Resolve

A **positive resolve (Sankalpa)** is taken mentally, reinforcing healing, calmness, and well-being.

Step 8: Closing Prayer (Śānti Mantra)

सर्वे भवन्तु सुखिनः ।
सर्वे सन्तु निरामयाः ।
सर्वे भद्राणि पश्यन्तु ।
मा कश्चिद् दुःखभाग्भवेत् ॥
ॐ शान्तिः शान्तिः शान्तिः ॥

Meaning:

May all be happy, may all be free from disease, may all see auspiciousness, and may none suffer.

Benefits of MSRT

- ✓ Deep mental relaxation
- ✓ Reduction of stress and anxiety
- ✓ Enhanced emotional stability
- ✓ Improved concentration and awareness
- ✓ Supportive in psychosomatic disorders

Conclusion

Mind Sound Resonance Technique systematically guides the practitioner from **external sound (Āhata)** to **inner silence (Anāhata)**. Through structured chanting, mental repetition, and silence, MSRT helps the mind settle into a state of **alert calmness and inner harmony**, making it a powerful therapeutic and meditative practice at SVYASA

3:20 PM – 4:00 PM: Prāṇāyāma and Naadanusandhana

Prāṇāyāma Session

Introduction

Prāṇāyāma is the yogic practice of regulating the breath to influence the flow of prāṇa (vital energy) in the body. In yoga therapy, prāṇāyāma plays a crucial role in balancing the autonomic nervous system, improving organ function, reducing stress, and preparing the mind for relaxation and meditation. During the session, prāṇāyāma practices were performed in a **systematic sequence**, progressing from cleansing and activating techniques to calming and cooling practices, and concluding with deep relaxation.

1. Kapālabhāti Prāṇāyāma

Kapālabhāti was practiced as the initial cleansing technique.

- ✓ The practice involved **forceful and rhythmic exhalation**, with passive inhalation.
- ✓ Emphasis was placed on abdominal contraction during exhalation.
- ✓ The practice was performed slowly and mindfully according to individual capacity.

Therapeutic effect:

Kapālabhāti helps in cleansing the respiratory passages, stimulating abdominal organs, improving digestion, enhancing metabolic activity, and increasing alertness.

2. Abdominal Breathing

After Kapālabhāti, **abdominal breathing** was practiced.

- During **inhalation**, the abdomen gently bulged outward.
- During **exhalation**, the abdomen moved inward.
- Participants were instructed to **observe the natural movement of the stomach** with each breath.
- The breathing was slow, smooth, and effortless.

Therapeutic effect:

Abdominal breathing promotes parasympathetic dominance, reduces stress, calms the mind, and improves oxygenation.

3. Nāḍī Śuddhi (Nāḍī Śodhana) Prāṇāyāma

Nāḍī Śuddhi Prāṇāyāma was practiced to purify the energy channels.

- ✓ Alternate nostril breathing was performed in a relaxed manner.
- ✓ Equal duration of inhalation and exhalation was maintained.
- ✓ Breath awareness was emphasized without breath retention.

Therapeutic effect:

Nāḍī Śuddhi balances the sympathetic and parasympathetic nervous systems, improves emotional stability, and enhances mental clarity.

4. Bhrāmarī Prāṇāyāma

Bhrāmarī Prāṇāyāma was practiced next.

- ✓ Inhalation was slow and deep.

- ✓ During exhalation, a gentle **humming sound** was produced.
- ✓ Awareness was maintained on the vibrations felt in the head and chest region.

Therapeutic effect:

Bhrāmarī calms the nervous system, reduces anxiety, relieves mental tension, and promotes inner silence.

5. Cooling Prāṇāyāma

Cooling prāṇāyāma practices were performed to reduce heat in the body and calm the mind.

a) Śītalī Prāṇāyāma

- ✓ Inhalation was done through the rolled tongue.
- ✓ Exhalation was done through the nose.

b) Śītkārī Prāṇāyāma

- ✚ Inhalation was done through clenched teeth with a hissing sound.
- ✚ Exhalation was done through the nose.

c) Sadanta Prāṇāyāma

- ✓ Inhalation was performed gently through the teeth.
- ✓ Exhalation was slow and relaxed through the nose.

Therapeutic effect:

Cooling prāṇāyāma reduces body heat, soothes the nervous system, alleviates stress, and is beneficial for gastritis, acidity, and psychosomatic disorders.

6. Naadanusandhana (Sound Awareness Practice)

After pranayama, the session proceeded to **Naadanusandhana**, a meditative practice involving awareness of internal and external sounds.

The practice included:

- ✓ Chanting of A, U, M (AUM)
- ✓ Gradual transition from audible sound to mental repetition
- ✓ Silent awareness of inner sound

Benefits of Naadanusandhana:

- ✚ Deepens concentration
- ✚ Calms fluctuations of the mind
- ✚ Enhances inner awareness
- ✚ Reduces emotional disturbances
- ✚ Leads to mental clarity and relaxation

Conclusion of the Session

The Pranayama and Naadanusandhana session resulted in deep physical relaxation and mental calmness. Participants experienced improved breath awareness, reduced stress, and a sense of inner stillness. The session effectively prepared the participants for meditation and higher yogic practices.

4:00 PM – 5:00 PM: Session III – Special Techniques (Section “A”)

Special Practice List – N&O Department

1. Breathing-Based Movements

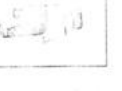

- Hands in & out breathing (sitting)
- Hand stretch breathing
- Ankle stretch breathing (sitting)
- Tiger breathing
- Sasankasana breathing
- Rabbit breathing
- Setubandhasana breathing

Purpose in N&O:

Improves lung capacity, oxygenation, reduces fatigue (common in oncology), enhances neuromuscular coordination, and calms the autonomic nervous system.

Neurology & Oncology Special Practice list (Section-A)

Hands in & out Breathing in sitting Position.		Loosening of fingers.	
Hand Stretch Breathing.		Loosening of wrists.	
Ankle Stretch Breathing in sitting position.		Shoulder rotation.	
Tiger Breathing.		Neck movement.	
Sasankasana Breathing.		Twisting.	
Rabbit Breathing.		ArdhaChakrasana.	
Strait leg raising alternate leg.		Vrikshasana.	
Side Leg Rising.		Garudasana (Balancing)	
Setubandhasana Breathing.		Padasanchalana.	
Folded leg lumber stretch.		Toe stretching.	

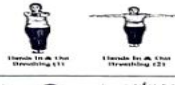

Cycling.		Patella movement.	
Pawanmuktasana Kriya.		Knee bending.	
Tounge Movement.		Half butterfly.	
Tounge Massaging.		Butterfly.	
Lip stretch.		Gomukasana.	
Simha Mudra.		Ustrasana.	
Head rolling.		DRT 15 min.	

KRIYAS

Jala Neti.		Sutra Neti.	
Vamana Dhouti.		Laghu Sanika Praksalana.	

nccra.onco.nro@villamedia@gmail.com / www.villamedia.com / 09022222222

Practice list for Oncology

Hand Stretch Breathing.		Manibandha Shakti Vikasaka (Wrists)	
Hands in & out Breathing.		Karaprasta shakti Vikasaka (Back of Hand)	
Ankle Stretch Breathing.		Kaphonoi Shakti Vikasaka (Elbows)	
Straight leg raising alternate leg.		Griva Shakti Vikasaka (Neck)	
Setubandhasana Breathing.		Folded leg lumbar stretch.	
QRT 3 min.		DRT 15 min.	

2. Loosening & Joint Movements (Sukshma Vyayama)

- ✓ Loosening of fingers
- ✓ Loosening of wrists
- ✓ Shoulder rotation
- ✓ Neck movements
- ✓ Twisting
- ✓ Toe stretching
- ✓ Ankle bending
- ✓ Ankle rotation
- ✓ Knee cap tightening

Purpose in Neurology:

- ❖ Prevents stiffness
- ❖ Improves peripheral circulation
- ❖ Enhances proprioception
- ❖ Maintains joint mobility in participants with weakness or neuropathy

3. Supine & Prone Strengthening Practices

- ✓ Straight leg raising (alternate leg)
- ✓ Side leg raising
- ✓ Folded leg lumbar stretch
- ✓ Bhujangasana
- ✓ Salabhasana
- ✓ Vakrasana

Clinical Benefit:

- Strengthens lower limbs
- Improves spinal flexibility
- Supports recovery in stroke / neuropathy
- Helps manage cancer-related muscle wasting

4. Standing & Balance Postures

- ✓ Ardha Chakrasana

- ✓ Vrikshasana
- ✓ Garudasana (Balancing)
- ✓ Pada Sanchalana

Neurological Relevance:

- ★ Improves balance & gait stability
- ★ Enhances neuromuscular coordination
- ★ Reduces fall risk
- ★ Stimulates cerebellar engagement

Why These Are Called “Special Techniques” in N&O

In Neurology & Oncology:

- ✓ Movements are slow and breath-synchronized
- ✓ Focus is on awareness (mind–body integration)
- ✓ Intensity is mild to moderate
- ✓ Safety and adaptability are prioritized

This explains **therapeutic neuromotor retraining + pranic regulation**.

5:00 PM – 6:00 PM: Evening Snacks

Light refreshments were provided.

6:00 PM – 6:30 PM: Bhajans

Evening bhajans were conducted, creating a peaceful and devotional environment.

6:40 PM – 7:40 PM: Trāṭaka and Cyclic Meditation

A guided session of **Trāṭaka and Cyclic Meditation (CM)** was conducted, helping improve concentration, emotional stability, and deep relaxation.

Trataka:

Steps of Trāṭaka Practice

8. Preparation and Relaxation

Sit comfortably on a chair or on the floor with the spine erect. Relax the body and mind, and begin the practice by chanting **Omkāra** to create a calm and focused mental state.

9. Eye Movement Exercises

Gently perform eye movements to prepare the eyes:

- ✓ Move the eyes from **left to right**
- ✓ Move the eyes **up and down**
- ✓ Perform **eyeball rotations** slowly in both directions

10. Palming and Gazing

Close the eyes and rub the palms together to generate warmth. Gently place the palms over the closed eyes without applying pressure. Slowly remove the palms, open the eyes, and begin gazing steadily at the **Dīpa or Jyothi (candle flame)**.

11. Position of the Candle

The candle should be placed at a distance of approximately **five feet** from the practitioner and positioned at the **same height as the eyes** to ensure comfortable and steady gazing.

Benefits of Trāṭaka

- ✓ Improves concentration and memory
- ✓ Enhances eye strength and visual coordination
- ✓ Reduces stress, anxiety, and mental restlessness
- ✓ Prepares the mind for deeper meditation

Trāṭaka – Precautions and Contraindications

Precautions:

- ✚ Practice Trāṭaka in a calm, well-ventilated, and dimly lit room.
- ✚ Gazing should be gentle; avoid straining or forcing the eyes.
- ✚ Keep the candle flame steady and practice for a short duration initially.

Contraindications:

- Should be avoided in conditions such as severe eye disorders, glaucoma, cataract, or recent eye surgery.
- Not recommended during acute headache, migraine, or eye infections

Cyclic Meditation (CM)

Is a guided yogic relaxation practice that involves **alternating phases of stimulation and relaxation**, helping to achieve deep physical, mental, and emotional rest. This technique is widely used at **SVYASA Arogyadhama** as part of the **Integrated Approach of Yoga Therapy (IAYT)** to reduce stress, enhance awareness, and balance the autonomic nervous system.

According to the practice followed, **Cyclic Meditation consists of three relaxation techniques:**

- ✓ IRT – Instant Relaxation Technique
- ✓ QRT – Quick Relaxation Technique
- ✓ DRT – Deep Relaxation Technique

1. Instant Relaxation Technique (IRT)

The practice begins with the participant **lying down on the mat in supine position**. One round of **Ākāra chanting** is performed to initiate relaxation.

- Awareness is brought to the **legs and hands**, and participants are instructed to **tighten the muscles gently while inhaling**.
- Tension is applied sequentially to **toes, knees, calf muscles, thighs, waist, arms, and palms**.
- After holding the tension for a few seconds, the muscles are **completely relaxed with exhalation**.

This immediate tightening and releasing of muscles helps to **quickly release physical stiffness and mental restlessness**. This phase is referred to as **IRT**.

2. Stimulating Postures (Dynamic Phase)

After IRT, participants **stand up** and perform gentle dynamic movements:

- ✚ **Forward bending posture** is performed, ensuring the stretch is felt in the upper part of the body and legs.
- ✚ The posture is maintained for a few seconds with awareness on pressure and stretch.
- ✚ Participants then **bend backward**, applying gentle pressure and returning to the neutral position.
- ✚ **Ākāra chanting** is done while returning to the standing position.

Next, **side bending movements** are practiced on both sides, applying pressure on one side of the body at a time.

This phase includes movements similar to **Ardha Chakrasana**, performed slowly and mindfully.

These movements provide **controlled stimulation**, activating muscles and internal organs before relaxation.

3. Quick Relaxation Technique (QRT)

After completing the stimulating postures, participants **lie down again on the mat**.

- Eyes are gently closed.
- Attention is brought to the **natural flow of breath**.
- Awareness is focused on the **abdominal movement**, where the abdomen rises like a mountain during inhalation and falls during exhalation.
- The breath is observed calmly for a few rounds.

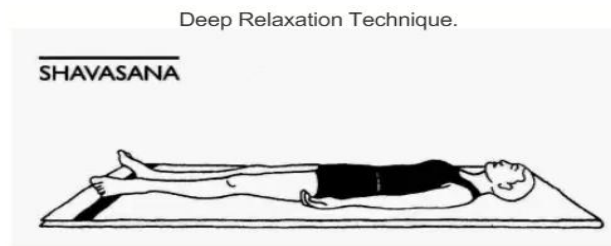

Participants are then guided to observe breathing by **placing the index finger near the nostrils**, noticing:

- ✓ Cool air while inhaling
- ✓ Warm air while exhaling

After this mindful observation of breath, **Makāra chanting** is performed, leading to mental calmness.

This phase is known as **QRT**.

4. Deep Relaxation Technique (DRT)

Practice

Lie down comfortably on your back in **Śavāsana**, keeping the legs slightly apart and arms relaxed away from the body. Close the eyes gently and allow the breath to flow naturally. Become aware of the body and consciously release all physical and mental tension.

Step 1: Relaxation of the Lower Part of the Body (Ākāra)

Bring your awareness to the **lower part of the body**.

- ✓ Focus on the **tips of the toes**, gently move them and relax.
- ✓ Feel relaxation spreading through the **soles of the feet and ankle joints**.
- ✓ Relax the **calf muscles** and gently pull up the kneecaps; release and relax.
- ✓ Shift awareness to the **thigh region** and feel the relaxation in the thigh muscles.
- ✓ Loosen the **buttock muscles and hip joints**, allowing them to relax completely.
- ✓ Bring awareness to the **pelvic region and waist** and relax totally.

Mentally affirm **R...E...L...A...X**.

To deepen relaxation in the lower part of the body, chant **Ākāra (A...A...A)** and feel the vibrations spreading through the legs, pelvis, and lower abdomen.

Step 2: Relaxation of the Middle Part of the Body (Ūkāra)

Slowly shift your awareness to the **middle part of the body**.

- Observe the **movement of the abdomen** for a few seconds and relax the abdominal muscles.
- Relax the **chest muscles** and feel the breath becoming smooth and effortless.
- Bring awareness to the **lower back**, relaxing the muscles around the spine.
- Gradually relax the **middle and upper back muscles**.
- Completely relax the **shoulder blades**.

Now shift attention to the **hands**:

- ✓ Sensitize and relax the **tips of the fingers** one by one.
- ✓ Relax the **palms**, loosen the **wrist joints**, and relax the forearms.
- ✓ Relax the **elbow joints, biceps, and triceps**.
- ✓ Allow the **shoulders** to drop and relax completely.

Bring awareness to the **neck region**, feel the relaxation around the neck muscles.

Slowly move the head **gently to the left and right**, then bring it back to the center.

Mentally affirm **R...E...L...A...X**.

To enhance relaxation of the middle part of the body, chant **Ūkāra (U...U...U)** and feel the vibrations spreading through the abdomen, chest, back, arms, and neck.

Step 3: Relaxation of the Upper Part of the Body (Makāra)

Now shift your awareness to the **upper part of the body**.

- ✓ Relax the cheeks and chin muscles.
- ✓ Feel relaxation in the lower and upper jaw, teeth, gums, and lips.
- ✓ Relax the soft and hard palate, throat, and vocal cords.
- ✓ Bring awareness to the nose, eyes, eyelids, eyebrows, and forehead, and relax them completely.
- ✓ Relax the temples, scalp, and the top of the head.

Allow the entire head region to become completely relaxed and still.

To deepen relaxation in the upper part of the body, chant **Makāra (M...M...M)** and feel the soothing vibrations in the face, throat, and head region.

Completion

Experience the **total relaxation of the entire body** from toes to head.

Remain in this state of deep rest and awareness for a few moments, observing the calmness and stillness within.

The practice may be concluded with a gentle **Omkāra chanting** followed by a **Śānti Mantra**, allowing the mind and body to return gradually to normal awareness.

Benefits of Cyclic Meditation

- ✓ Deep physical and mental relaxation
- ✓ Reduction of stress and anxiety
- ✓ Improved autonomic balance
- ✓ Enhanced awareness and concentration
- ✓ Supportive in psychosomatic and lifestyle disorders

Cyclic Meditation, as practiced at SVYASA, is a **scientifically designed yogic technique** that effectively integrates **movement, breath awareness, mantra, and relaxation**. The systematic alternation between stimulation and relaxation helps participants attain a state of **alert calmness**, making it an essential therapeutic practice in yoga therapy programs

Sleep special technique

Steps to be performed before going to bed

1. **Standing:**
Walking 10 minutes with awareness on toes of both the feet's
2. **Sitting: (5 min)**
Nadisuddhi 5 rounds
3. **Supine: (5 min)**
Abdominal breathing followed by "A" Kara chanting 9 rounds
4. **Reverse DRT from head to toes (10 min)**
 - "M" Kara 3 rounds
 - "U" Kara 3 rounds
 - "A" Kara 3 rounds
 - "M-U-A" Kara 3 rounds
 - "OM" Kara 5 rounds
5. **"OM" Japa (mental chanting) followed by silence**

7:50 PM – 8:30 PM: Dinner

A light and sattvic dinner was served.

8:30 PM – 9:00 PM: Lecture by Guruji

The day concluded with an **inspirational lecture by Guruji**, focusing on yogic philosophy, discipline, and holistic living.

Conclusion – Neurology & Oncology:

The PET session in A-Section Neurology and Oncology provided deep relaxation and pranic balance without physical strain. Neurological participants showed improved internal awareness and reduced anxiety, while oncology participants experienced decreased fatigue and better emotional stability. Overall, the technique supported quality of life as a safe complementary therapy alongside medical treatment.

~~~~~

### **8<sup>th</sup> Feb 2026 Sunday - (Neurology & Oncology Department)**

On **08<sup>th</sup> February**, I was allotted to **A Section**, which includes the **Neurology** and **Oncology** departments. This section primarily deals with participants suffering from disorders of the nervous system and various types of cancers. The exposure provided a deeper understanding of the role of integrative yoga therapy in chronic and critical illnesses.

### **5:20am to 06:am**

The early morning session from 5:20 am to 6:00 am followed the same routine as the previous week's schedule; hence, the activities were repetitive and had already been documented earlier

## **06:00AM to 07:00AM – A Section Special Techniques**

### **1. Om Chanting (Opening Centering)**

- ✚ 3 rounds of Om chanting.
- ✚ Slow, prolonged exhalation with vibration awareness.
- ✚ Attention brought to chest and head region.

#### **Therapeutic Significance:**

- ✓ Activates parasympathetic nervous system
- ✓ Reduces anxiety and emotional restlessness
- ✓ Improves vagal tone (important in neurological disorders)
- ✓ Creates positive group healing vibration in oncology participants

### **2. Hand Stretching with Om Kara Relaxation**

- Slow hand stretching (10 rounds)
- Coordinated inhalation during stretch
- Exhalation with Om chanting during relaxation phase

#### **Significance:**

- Enhances neuromuscular coordination
- Improves joint mobility in shoulder and upper limb
- Sound vibration reduces muscular tension
- Promotes breath-movement synchronization

For neuro participants, this helps improve motor planning and coordination.

### **3. Forehead, Chest & Upward Stretch with Om**

- Arms raised towards forehead → chest expansion → full upward stretch
- Slow relaxation with Om vibration

#### **Significance:**

- ❖ Improves thoracic expansion
- ❖ Enhances lung capacity (beneficial for fatigued oncology participants)
- ❖ Stimulates proprioceptive awareness
- ❖ Reduces upper body stiffness

### **4. Upward Stretching Standing on Toes**

- ✓ Heels raised, arms extended upward
- ✓ Balance maintained briefly
- ✓ Relaxation with Om chanting

#### **Significance:**

- ✓ Improves balance and postural stability
- ✓ Strengthens calf muscles
- ✓ Enhances cerebellar coordination (important in neuro rehab)
- ✓ Builds confidence in participants with instability

### **5. Shashankasana with M-Kara Relaxation**

- ✓ 10 slow rounds

- ✓ Exhalation while bending forward
- ✓ Relaxation with humming “M” sound

**Significance:**

- ✓ Reduces sympathetic overactivity
- ✓ Calms hypothalamic stress response
- ✓ Relieves headache and mental tension
- ✓ Induces deep mental relaxation

**6. Marjariasana with M-Kara**

- ✓ 10 rounds of spinal flexion and extension
- ✓ Coordinated breathing
- ✓ Relaxation with M vibration

**Significance:**

- ❖ Improves spinal mobility
- ❖ Enhances cerebrospinal fluid circulation
- ❖ Stimulates nerve roots
- ❖ Reduces stiffness in lumbar and cervical region

**7. Leg Raising (90°) with Om Relaxation**

- ✓ 10 repetitions
- ✓ Slow controlled movement
- ✓ Relaxation with Om chanting

**Significance:**

- Strengthens abdominal and hip flexor muscles
- Improves lower limb circulation
- Enhances neuromuscular control
- Prevents muscle atrophy in neurological participants

**8. Side Leg Raising**

- 10 repetitions each side
- Followed by Om relaxation

**Significance:**

- ✚ Strengthens lateral hip muscles
- ✚ Improves balance and gait control
- ✚ Supports rehabilitation in hemiplegic participants

**9. Lumbar Stretching**

- ✓ Gentle lower back mobilization

**Significance:**

- ✓ Reduces lower back stiffness
- ✓ Improves spinal flexibility
- ✓ Relieves nerve compression symptoms

**10. Setu Bandhasana with Om Kara**

- ✓ 10 slow rounds

- ✓ Inhale lift, exhale relax with Om

**Significance:**

- ✓ Strengthens posterior chain muscles
- ✓ Enhances blood flow to brain
- ✓ Improves autonomic balance
- ✓ Reduces fatigue

**11. DRT (Deep Relaxation Technique)**

- ✓ Sequential relaxation from toes to head
- ✓ Breath awareness
- ✓ Silence observation

**Therapeutic Importance:**

- Deep parasympathetic activation
- Reduces cortisol levels
- Improves emotional stability
- Promotes healing environment

**Overall Special Technique Focus**

This session emphasized:

- ✚ Sound vibration therapy (Om & M kara)
- ✚ Breath–movement coordination
- ✚ Slow mindful execution
- ✚ Nervous system calming
- ✚ Psycho-emotional stabilization

Especially in A Section (Neurology & Oncology), the aim was not intensity but regulation of prana and stabilization of manomaya kosha.

**7:00AM to 08:00AM – Maitri Milan**

Maitri Milan was conducted as a **group spiritual session**, promoting emotional bonding and mental positivity. The session included:

The session began with the chanting of **Ganesha Stotra**, invoking auspiciousness and the removal of obstacles, followed by **Dakshinamurthy Stotram**, which signifies the principle of the Guru and supreme knowledge.

This was followed by the recitation of the **Pratah Smarami Sloka**, cultivating gratitude and right orientation at the beginning of the session.

Selected verses from the **Bhagavad Gita** were then chanted, reinforcing values of dharma, self-awareness, and balanced living.

**8:00 AM – 9:00 AM: Breakfast**

A **sattvic breakfast** was served, supporting digestion and aligning with yogic dietary principles followed at Arogyadhama.

**09:00AM to 10:00AM N&O Department - Parameters**

**Date:** 8<sup>th</sup> February 2026

**Section:** A-Section

**Specialty:** Gastroenterology

**Place:** SVYASA Arogyadhama

### Case Study

**Name:** \*\*\*\*\*

**Age/Gender:** 41 years / Male

**Occupation:** IT Professional

**Duration of Stay:** 1 week

### **Diagnosis**

- ✓ Status Post Tracheal Carcinoma
- ✓ Post Chemotherapy & Radiotherapy
- ✓ Large tracheal tumor with proximal lymph node involvement
- ✓ Skeletal metastasis
- ✓ Urinary incontinence (urgency)

### **Chief Complaints**

- Weakness and fatigue
- Burning sensation in bilateral feet (2 weeks)
- Pain in right thigh & leg (2 weeks)
- Numbness in hip region (December 2025 onset)
- Slurred speech (1 week)
- Weight loss
- Urinary urgency & incontinence
- Sleep disturbance

### **History of Present Illness**

- 🚦 Diagnosed with tracheal carcinoma (July 2025).
- 🚦 Underwent tumor excision (August 2025).
- 🚦 Completed 6 cycles chemotherapy & 35 sessions radiotherapy.

- ✚ PET scan showed skeletal metastasis.
- ✚ Developed progressive neurological symptoms:
  - a. Lower limb weakness
  - b. Sensory changes
  - c. Urinary control disturbance

Indicates probable metastatic spinal involvement causing neurological deficits.

### Past History

- ✓ No major prior chronic illness mentioned
- ✓ Family history: Breast cancer (mother), oral cancer (maternal grandmother)

### General Physical Examination

| Parameter     | Observation |
|---------------|-------------|
| Pulse         | 83 bpm      |
| BP            | 124/74 mmHg |
| RR            | 24 cpm      |
| Height        | 170 cm      |
| Weight        | 67.5 kg     |
| Bhramari Time | 8 sec       |

### Investigations

- Hb: 8.9 gm% (Anemia)
- Lymphocytes: 6.2
- Sodium: 129.8 (Hyponatremia)

Indicates:

- Chemotherapy-induced anemia
- Nutritional compromise
- Electrolyte imbalance

### Pathophysiology (Clinical Understanding)

Tracheal carcinoma can metastasize to:

- Lymph nodes
- Skeletal system
- Possibly spinal cord

Skeletal metastasis → spinal cord compression →

- Lower limb weakness
- Numbness
- Urinary incontinence

- Slurred speech (possible CNS involvement or systemic weakness)

Additionally:

- ✓ Chemotherapy → fatigue, anemia
- ✓ Radiotherapy → tissue inflammation
- ✓ Chronic stress → sympathetic overdrive

### **IAYT (Integrated Approach of Yoga Therapy)**

#### **A) Physical Module**

- ✚ Oncology set practices
- ✚ Back pain practices
- ✚ Gentle stretching
- ✚ Speech training exercises

Modified due to neurological weakness.

#### **B) Pranayama**

- ✓ Abdominal breathing
- ✓ Nadi Shuddhi (without retention)
- ✓ Bhramari
- ✓ Slow regulated breathing

Goals:

- ✓ Improve vagal tone
- ✓ Reduce anxiety
- ✓ Improve oxygenation

#### **C) Special Techniques**

- MSRT
- PET
- Yoga Nidra

Used to:

- Reduce pain perception
- Improve sleep
- Reduce stress hormones

#### **Naturopathy Management**

- ✓ Naturopathy treatments advised
- ✓ Possibly mud therapy & hydrotherapy
- ✓ Pain management support
- ✓ Detox support

#### **Diet Plan**

Likely included:

- ✓ High protein vegetarian diet
- ✓ Iron-rich foods

- ✓ Warm easily digestible foods
- ✓ Avoid processed, spicy food

Goal:

- ✚ Improve Hb
- ✚ Support tissue repair
- ✚ Reduce inflammation

### Parameter Progress (During Stay)

#### Observed Improvements:

- ✓ Sleep improved
- ✓ Bowel movements became regular
- ✓ Reduction in anxiety
- ✓ Stable vitals

#### Discharge Condition

- ✓ Sleep sound
- ✓ Bowel clear
- ✓ Pain reduced
- ✓ Emotional stability improved

#### Pancha Kosha Analysis

| Kosha       | Disturbance          | Therapy Applied  |
|-------------|----------------------|------------------|
| Annamaya    | Weakness, metastasis | Gentle asana     |
| Pranamaya   | Breath imbalance     | Nadi Shuddhi     |
| Manomaya    | Fear of cancer       | MSRT, Yoga Nidra |
| Vijnanamaya | Emotional stress     | Counseling       |
| Anandamaya  | Loss of inner joy    | Meditation       |

#### Clinical Outcome

Although structural pathology (metastasis) remains medical concern, IAYT showed:

- ✓ Improved sleep
- ✓ Better bowel control
- ✓ Reduced stress
- ✓ Improved coping ability
- ✓ Reduced pain perception

Yoga acted as **supportive oncology rehabilitation therapy**.

#### Discussion

This case demonstrates:

- Role of yoga in metastatic cancer rehabilitation
- Importance of autonomic regulation
- Psycho-emotional healing in oncology
- Integrative approach improves quality of life

### **10:00AM to 11:00PM Lecture**

#### **Topic: Annamaya Kosha & Pranamaya Kosha**

**Speaker:** Basavaraj Sir

**Venue:** Arogyadhama

#### **Introduction**

The lecture focused on the concept of **Pancha Kosha** from Taittiriya Upanishad and its application in Yoga Therapy. The speaker emphasized understanding disease not merely at the physical level, but across multiple layers of human existence.

Special attention was given to:

- **Annamaya Kosha** (Physical Sheath)
- **Pranamaya Kosha** (Vital Energy Sheath)

#### **Annamaya Kosha (Physical Body)**

##### **Definition:**

Annamaya Kosha is the outermost sheath composed of food (Anna). It represents the gross physical body made up of:

- Muscles
- Bones
- Organs
- Tissues
- Blood

It is sustained and nourished by food.

##### **Key Points Explained:**

- “As the food, so the body.”
- Imbalance in diet leads to structural and metabolic disorders.
- Most modern diseases begin with lifestyle errors affecting this kosha.
- Improper digestion → toxin accumulation → disease manifestation.

##### **Clinical Correlation (As Explained in Class)**

In Arogyadhama cases:

- Cancer participants → weight loss, muscle wasting
- Neurology participants → muscle weakness
- Constipation → digestive imbalance

All these indicate disturbance at **Annamaya Kosha**.

##### **Therapeutic Approach:**

To correct Annamaya Kosha imbalance:

- Asana practice
- Proper diet (Sattvic, protein-rich when needed)
- Cleansing practices
- Physical activity

Yoga therapy first stabilizes this sheath.

### **11:00 AM – 12:00 PM: Self-Study (Male Interns)**

Male interns utilized this time for **self-study** by visiting the library and referring to:

- ✓ Yoga therapy theses
- ✓ Dissertations
- ✓ Yoga Itihasa
- ✓ Classical yogic texts

This session enhanced theoretical understanding and research orientation.

### **12:00PM to 1:00PM Special Technique/ PET**

#### **Introduction**

Pranic Energization Technique (PET) is an advanced, systematic, and scientific yogic relaxation method developed by S-VYASA. It is designed to energize the entire body through conscious regulation and movement of *Prana Shakti* (vital energy).

In the Neurology & Oncology Department, PET is practiced as a special therapeutic technique to improve immune strength, enhance neuromuscular awareness, reduce fatigue, and promote deep psycho-physiological relaxation.

This technique works predominantly at the level of the **Pranamaya Kosha**, influencing the Annamaya and Manomaya Kosha.

#### **2. Objectives of PET in N&O**

- ✓ To rejuvenate all organ systems
- ✓ To enhance immune functioning
- ✓ To purify nadis and balance pranic flow
- ✓ To reduce stress and psychosomatic disturbances
- ✓ To improve sensory awareness in neurological participants
- ✓ To promote emotional stability in oncology participants

#### **3. Procedure Followed During Session**

##### **1. Preparation – Shavasana**

Participants were made to lie down comfortably in Shavasana. Initial settling with slow breathing awareness was done.

##### **2. Breath Awareness**

Attention was directed to the natural flow of air at the nostrils to increase subtle sensitivity and concentration.

##### **3. Vyāna Recognition through Mudras**

Practice of:

- ✓ Chin Mudra
- ✓ Chinmaya Mudra

- ✓ Adhi Mudra

Participants observed pulsations at fingertips and synchronized awareness with breathing.

#### **4. Palm Rotation (Energy Activation)**

Slow clockwise and anticlockwise palm rotations (10 rounds each) were practiced to activate subtle pranic movement.

#### **5. Magnetic Energy Sensitization**

Hands were slowly brought closer and apart to feel subtle “magnetic” sensations between palms.

#### **6. Prana Sanchara (Mental Movement of Energy)**

Prana was mentally guided:

- ✓ Along the right side of the body from heel upward
- ✓ Along the left side from head to toes

Participants were instructed to observe sensations without effort.

#### **7. Experience of Deep Stillness**

Silence was maintained to experience expansion of awareness and deep relaxation.

#### **8. Sankalpa (Resolve)**

One positive affirmation was repeated mentally 9 times (e.g., “I am full of energy”) with complete awareness.

#### **9. Closing Prayer**

Session concluded with a universal peace prayer for well-being.

### **4. Therapeutic Applications in Neurology & Oncology**

PET is beneficial in the management of:

#### **Neurological Conditions**

- ★ Stroke (Post CVA rehabilitation)
- ★ Peripheral neuropathy
- ★ Parkinson’s disease
- ★ Multiple sclerosis
- ★ Migraine
- ★ Epilepsy (supportive relaxation)
- ★ Neuromuscular weakness
- ★ Anxiety-related neurological disturbances

#### **Oncology Conditions**

- ❖ Cancer-related fatigue
- ❖ Breast cancer

- ❖ Lung cancer
- ❖ Oral cancer
- ❖ Post-chemotherapy weakness
- ❖ Immune suppression
- ❖ Stress and depression in cancer participants

#### **Other Chronic Conditions**

- ✚ AIDS (immune support)
- ✚ Hypertension
- ✚ Diabetes
- ✚ Chronic pain conditions
- ✚ Psychosomatic disorders

(Note: PET supports management and improves quality of life; it is not a standalone medical cure.)

#### **5. Observed Benefits During Session**

- ✓ Visible reduction in anxiety
- ✓ Improved breathing rhythm
- ✓ Increased relaxation response
- ✓ Enhanced body awareness
- ✓ Participants reported feeling light and energized
- ✓ Improved emotional calmness

#### **6. Kosha-Level Understanding**

- **Annamaya Kosha:** Relaxation of musculoskeletal system
- **Pranamaya Kosha:** Regulation and balancing of pranic flow
- **Manomaya Kosha:** Reduction of stress and emotional disturbances

#### **7. Conclusion**

Pranic Energization Technique (PET) is an effective complementary therapeutic practice in Neurology & Oncology settings. It enhances pranic balance, strengthens psychological resilience, and supports immune functioning. Regular practice contributes to improved overall well-being and quality of life in chronic and degenerative conditions.

#### **1:00 PM – 2:00 PM: Lunch**

A balanced **sattvic lunch** was provided, supporting digestive health and recovery.

#### **2:00 PM – 2:30 PM: Rest**

A short rest period was given to allow digestion and physical recovery.

#### **2:30 PM – 3:10 PM: MSRT (Mind Sound Resonance Technique)**

The content was already covered in the previous week and is being repeated again in the same day-wise manner.

## 4:00 PM – 5:00 PM: Session III – Special Techniques (Section “A”)

### Special Practice List – N&O Department

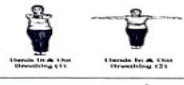

#### 1. Breathing-Based Movements

- Hands in & out breathing (sitting)
- Hand stretch breathing
- Ankle stretch breathing (sitting)
- Tiger breathing
- Sasankasana breathing
- Rabbit breathing
- Setubandhasana breathing

#### Purpose in N&O:

Improves lung capacity, oxygenation, reduces fatigue (common in oncology), enhances neuromuscular coordination, and calms the autonomic nervous system.

#### Practice list for Oncology

|                                     |                                                                                     |                                           |                                                                                       |
|-------------------------------------|-------------------------------------------------------------------------------------|-------------------------------------------|---------------------------------------------------------------------------------------|
| Hand Stretch Breathing.             |   | Manibandha Shakti Vikasaka (Wrists)       |   |
| Hands in & out Breathing.           |  | Karaprasta shakti Vikasaka (Back of Hand) |  |
| Ankle Stretch Breathing.            |  | Kaphonoi Shakti Vikasaka (Elbows)         |  |
| Straight leg raising alternate leg. |  | Griva Shakti Vikasaka (Neck)              |  |
| Setubandhasana Breathing.           |  | Folded leg lumbar stretch.                |  |
| QRT 3 min.                          |  | DRT 15 min.                               |  |

#### 2. Loosening & Joint Movements (Sukshma Vyayama)

- ✓ Loosening of fingers
- ✓ Loosening of wrists
- ✓ Shoulder rotation
- ✓ Neck movements
- ✓ Twisting
- ✓ Toe stretching
- ✓ Ankle bending
- ✓ Ankle rotation
- ✓ Knee cap tightening

#### Purpose in Neurology:

- ❖ Prevents stiffness

- ❖ Improves peripheral circulation
- ❖ Enhances proprioception
- ❖ Maintains joint mobility in participants with weakness or neuropathy

### 3. Supine & Prone Strengthening Practices

- ✓ Straight leg raising (alternate leg)
- ✓ Side leg raising
- ✓ Folded leg lumbar stretch
- ✓ Bhujangasana
- ✓ Salabhasana
- ✓ Vakrasana

#### Clinical Benefit:

- Strengthens lower limbs
- Improves spinal flexibility
- Supports recovery in stroke / neuropathy
- Helps manage cancer-related muscle wasting

### 4. Standing & Balance Postures

- ✓ Ardha Chakrasana
- ✓ Vrikshasana
- ✓ Garudasana (Balancing)
- ✓ Pada Sanchalana

#### Neurological Relevance:

- ★ Improves balance & gait stability
- ★ Enhances neuromuscular coordination
- ★ Reduces fall risk
- ★ Stimulates cerebellar engagement

#### Why These Are Called “Special Techniques” in N&O

In Neurology & Oncology:

- ✓ Movements are slow and breath-synchronized
- ✓ Focus is on awareness (mind–body integration)
- ✓ Intensity is mild to moderate
- ✓ Safety and adaptability are prioritized

This explains **therapeutic neuromotor retraining + pranic regulation**.

#### 5:00 PM – 6:00 PM: Evening Snacks

Light refreshments were provided.

#### 6:00 PM – 6:30 PM: Bhajans

Evening bhajans were conducted, creating a peaceful and devotional environment.

#### 6:40 PM – 7:40 PM: Trāṭaka and Cyclic Meditation

A guided session of **Trāṭaka and Cyclic Meditation (CM)** was conducted, helping improve concentration, emotional stability, and deep relaxation.

## Trataka:

### Steps of Trāṭaka Practice

#### 12. Preparation and Relaxation

Sit comfortably on a chair or on the floor with the spine erect. Relax the body and mind, and begin the practice by chanting **Omkāra** to create a calm and focused mental state.

#### 13. Eye Movement Exercises

Gently perform eye movements to prepare the eyes:

- ✓ Move the eyes from **left to right**
- ✓ Move the eyes **up and down**
- ✓ Perform **eyeball rotations** slowly in both directions

#### 14. Palming and Gazing

Close the eyes and rub the palms together to generate warmth. Gently place the palms over the closed eyes without applying pressure. Slowly remove the palms, open the eyes, and begin gazing steadily at the **Dīpa or Jyothi (candle flame)**.

#### 15. Position of the Candle

The candle should be placed at a distance of approximately **five feet** from the practitioner and positioned at the **same height as the eyes** to ensure comfortable and steady gazing.

### Benefits of Trāṭaka

- ✓ Improves concentration and memory
- ✓ Enhances eye strength and visual coordination
- ✓ Reduces stress, anxiety, and mental restlessness
- ✓ Prepares the mind for deeper meditation

### Trāṭaka – Precautions and Contraindications

#### Precautions:

- 🌈 Practice Trāṭaka in a calm, well-ventilated, and dimly lit room.

- ✚ Gazing should be gentle; avoid straining or forcing the eyes.
- ✚ Keep the candle flame steady and practice for a short duration initially.

#### **Contraindications:**

- Should be avoided in conditions such as severe eye disorders, glaucoma, cataract, or recent eye surgery.
- Not recommended during acute headache, migraine, or eye infections

#### **Cyclic Meditation (CM)**

Is a guided yogic relaxation practice that involves **alternating phases of stimulation and relaxation**, helping to achieve deep physical, mental, and emotional rest. This technique is widely used at **SVYASA Arogyadhama** as part of the **Integrated Approach of Yoga Therapy (IAYT)** to reduce stress, enhance awareness, and balance the autonomic nervous system.

According to the practice followed, **Cyclic Meditation consists of three relaxation techniques:**

- ✓ IRT – Instant Relaxation Technique
- ✓ QRT – Quick Relaxation Technique
- ✓ DRT – Deep Relaxation Technique

##### **1. Instant Relaxation Technique (IRT)**

The practice begins with the participant **lying down on the mat in supine position**. One round of **Ākāra chanting** is performed to initiate relaxation.

- Awareness is brought to the **legs and hands**, and participants are instructed to **tighten the muscles gently while inhaling**.
- Tension is applied sequentially to **toes, knees, calf muscles, thighs, waist, arms, and palms**.
- After holding the tension for a few seconds, the muscles are **completely relaxed with exhalation**.

This immediate tightening and releasing of muscles helps to **quickly release physical stiffness and mental restlessness**. This phase is referred to as **IRT**.

##### **2. Stimulating Postures (Dynamic Phase)**

After IRT, participants **stand up** and perform gentle dynamic movements:

- ✚ **Forward bending posture** is performed, ensuring the stretch is felt in the upper part of the body and legs.
- ✚ The posture is maintained for a few seconds with awareness on pressure and stretch.
- ✚ Participants then **bend backward**, applying gentle pressure and returning to the neutral position.
- ✚ **Ākāra chanting** is done while returning to the standing position.

Next, **side bending movements** are practiced on both sides, applying pressure on one side of the body at a time.

This phase includes movements similar to **Ardha Chakrasana**, performed slowly and mindfully.

These movements provide **controlled stimulation**, activating muscles and internal organs before relaxation.

### 3. Quick Relaxation Technique (QRT)

After completing the stimulating postures, participants **lie down again on the mat**.

- Eyes are gently closed.
- Attention is brought to the **natural flow of breath**.
- Awareness is focused on the **abdominal movement**, where the abdomen rises like a mountain during inhalation and falls during exhalation.
- The breath is observed calmly for a few rounds.

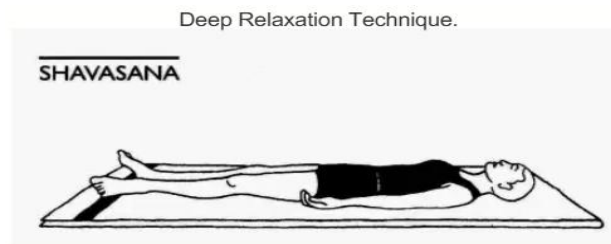

Participants are then guided to observe breathing by **placing the index finger near the nostrils**, noticing:

- ✓ Cool air while inhaling
- ✓ Warm air while exhaling

After this mindful observation of breath, **Makāra chanting** is performed, leading to mental calmness.

This phase is known as **QRT**.

### 4. Deep Relaxation Technique (DRT)

#### Practice

Lie down comfortably on your back in **Śavāsana**, keeping the legs slightly apart and arms relaxed away from the body. Close the eyes gently and allow the breath to flow naturally. Become aware of the body and consciously release all physical and mental tension.

#### Step 1: Relaxation of the Lower Part of the Body (Ākāra)

Bring your awareness to the **lower part of the body**.

- ✓ Focus on the **tips of the toes**, gently move them and relax.
- ✓ Feel relaxation spreading through the **soles of the feet and ankle joints**.
- ✓ Relax the **calf muscles** and gently pull up the kneecaps; release and relax.
- ✓ Shift awareness to the **thigh region** and feel the relaxation in the thigh muscles.
- ✓ Loosen the **buttock muscles and hip joints**, allowing them to relax completely.
- ✓ Bring awareness to the **pelvic region and waist** and relax totally.

Mentally affirm **R...E...L...A...X**.

To deepen relaxation in the lower part of the body, chant **Ākāra (A...A...A)** and feel the vibrations spreading through the legs, pelvis, and lower abdomen.

### **Step 2: Relaxation of the Middle Part of the Body (Ūkāra)**

Slowly shift your awareness to the **middle part of the body**.

- Observe the **movement of the abdomen** for a few seconds and relax the abdominal muscles.
- Relax the **chest muscles** and feel the breath becoming smooth and effortless.
- Bring awareness to the **lower back**, relaxing the muscles around the spine.
- Gradually relax the **middle and upper back muscles**.
- Completely relax the **shoulder blades**.

Now shift attention to the **hands**:

- ✓ Sensitize and relax the **tips of the fingers** one by one.
- ✓ Relax the **palms**, loosen the **wrist joints**, and relax the forearms.
- ✓ Relax the **elbow joints, biceps, and triceps**.
- ✓ Allow the **shoulders** to drop and relax completely.

Bring awareness to the **neck region**, feel the relaxation around the neck muscles.

Slowly move the head **gently to the left and right**, then bring it back to the center.

Mentally affirm **R...E...L...A...X**.

To enhance relaxation of the middle part of the body, chant **Ūkāra (U...U...U)** and feel the vibrations spreading through the abdomen, chest, back, arms, and neck.

### **Step 3: Relaxation of the Upper Part of the Body (Makāra)**

Now shift your awareness to the **upper part of the body**.

- ✓ Relax the cheeks and chin muscles.
- ✓ Feel relaxation in the lower and upper jaw, teeth, gums, and lips.
- ✓ Relax the soft and hard palate, throat, and vocal cords.
- ✓ Bring awareness to the nose, eyes, eyelids, eyebrows, and forehead, and relax them completely.
- ✓ Relax the temples, scalp, and the top of the head.

Allow the entire head region to become completely relaxed and still.

To deepen relaxation in the upper part of the body, chant **Makāra (M...M...M)** and feel the soothing vibrations in the face, throat, and head region.

### **Completion**

Experience the **total relaxation of the entire body** from toes to head.

Remain in this state of deep rest and awareness for a few moments, observing the calmness and stillness within.

The practice may be concluded with a gentle **Omkāra chanting** followed by a **Śānti Mantra**, allowing the mind and body to return gradually to normal awareness.

## Benefits of Cyclic Meditation

- ✓ Deep physical and mental relaxation
- ✓ Reduction of stress and anxiety
- ✓ Improved autonomic balance
- ✓ Enhanced awareness and concentration
- ✓ Supportive in psychosomatic and lifestyle disorders

Cyclic Meditation, as practiced at SVYASA, is a **scientifically designed yogic technique** that effectively integrates **movement, breath awareness, mantra, and relaxation**. The systematic alternation between stimulation and relaxation helps participants attain a state of **alert calmness**, making it an essential therapeutic practice in yoga therapy programs

### Sleep special technique

Steps to be performed before going to bed

- 1. Standing:**  
Walking 10 minutes with awareness on toes of both the feet's
- 2. Sitting: (5 min)**  
Nadisuddhi 5 rounds
- 3. Supine: (5 min)**  
Abdominal breathing followed by "A" Kara chanting 9 rounds
- 4. Reverse DRT from head to toes (10 min)**
  - "M" Kara 3 rounds
  - "U" Kara 3 rounds
  - "A" Kara 3 rounds
  - "M-U-A" Kara 3 rounds
  - "OM" Kara 5 rounds
- 5. "OM" Japa (mental chanting) followed by silence**

## 7:50 PM – 8:30 PM: Dinner

A light and sattvic dinner was served.

## 8:30 PM – 9:00 PM: Lecture by Guruji

The day concluded with an **inspirational lecture by Guruji**, focusing on yogic philosophy, discipline, and holistic living.

## Conclusion – Neurology & Oncology:

The PET session in A-Section Neurology and Oncology provided deep relaxation and pranic balance without physical strain. Neurological participants showed improved internal awareness and reduced anxiety, while oncology participants experienced decreased fatigue and better emotional stability. Overall, the technique supported quality of life as a safe complementary therapy alongside medical treatment.

~~~~~

Day 7 – 9th February 2026 (Monday)

Time: 5:20AM to 6:00AM

The seventh day of the internship commenced with Omkāra chanting, followed by the recitation of *Bhadram Karṇebhiḥ* and *Prātaḥ Smarāmi* shlokas, and concluded with Om Meditation. These practices enhanced mental clarity, positivity, and inner awareness, preparing us for the day's therapeutic activities.

The early morning session from 5:20 am to 6:00 am followed the same routine as the previous week's schedule; hence, the activities were repetitive and had already been documented earlier.

B-Section (Cardio & Pulmonology)

Date: 9th February 2026

Section: B-Section

Specialty: Cariology & Pulmonology

Place: SVYASA Arogyadhama

Cardiology & Pulmonology – Overview

(As Observed in B-Section at S-VYASA)

During the B-Section posting at **S-VYASA (Swami Vivekananda Yoga Anusandhana Samsthana)**, we observed therapeutic interventions for participants in the Cardiology and Pulmonology departments. At S-VYASA, these conditions are managed using an integrated approach combining modern medical science with yoga therapy based on the Panchakosha model.

Cardiology

Cardiology is the branch of medicine that deals with disorders of the heart and blood vessels. The heart is responsible for pumping oxygenated blood throughout the body, and any dysfunction can affect overall health.

Common Conditions Seen in Cardiology Section:

- ✓ Hypertension (High Blood Pressure)
- ✓ Coronary Artery Disease (CAD)
- ✓ Heart Failure
- ✓ Arrhythmias (Irregular heartbeat)
- ✓ Post-Myocardial Infarction (Post-Heart Attack cases)
- ✓ Cardiomyopathy

Common Symptoms:

- ★ Chest pain
- ★ Breathlessness
- ★ Palpitations

- ★ Fatigue
- ★ Swelling in legs

Relevance of Yoga Therapy at S-VYASA:

- ✚ Reduces sympathetic overactivity
- ✚ Improves heart rate variability
- ✚ Lowers blood pressure
- ✚ Enhances circulation
- ✚ Reduces stress (major cardiac risk factor)

In cardiology participants, practices are slow, gentle, breath-coordinated, and closely monitored to ensure safety and gradual improvement.

Pulmonology

Pulmonology is the branch of medicine that focuses on lung and respiratory system disorders. The lungs are responsible for oxygen exchange and maintaining proper breathing.

Common Conditions Seen in Pulmonology Section:

- ❖ Bronchial Asthma
- ❖ COPD (Chronic Obstructive Pulmonary Disease)
- ❖ Tuberculosis (post-treatment rehabilitation)
- ❖ Pulmonary Fibrosis
- ❖ Chronic Bronchitis
- ❖ Post-COVID lung weakness

Common Symptoms:

- Shortness of breath
- Wheezing
- Chronic cough
- Reduced lung capacity
- Fatigue

Relevance of Yoga Therapy at S-VYASA:

- Improves lung capacity
- Strengthens respiratory muscles
- Enhances oxygen saturation
- Reduces anxiety-related breathlessness
- Improves diaphragmatic breathing

Breathing practices (Pranayama) play a major role in this section, along with relaxation and meditation techniques to improve respiratory efficiency.

Combined Importance in B-Section

Cardiology and Pulmonology are closely connected because:

- ✓ The heart and lungs work together in oxygen circulation.
- ✓ Poor lung function increases cardiac workload.
- ✓ Cardiac weakness can lead to breathlessness.

At S-VYASA, yoga therapy in this section mainly focuses on:

-  Breath regulation
-  Gentle asanas
-  Relaxation techniques (DRT, QRT)
-  Stress reduction
-  Improving oxygen efficiency
-  Balancing Annamaya, Pranamaya, and Manomaya Koshas

Daily Schedule and Activities

6:00 AM – 6:55 AM: Special Technique B-Section

Chair Asanas & Mild Exercises – B Section (Cardiology & Pulmonology)

The morning session from 6:00 AM to 6:55 AM focused on chair-based asanas and mild exercises designed for cardiac and pulmonary participants. The practices were gentle, breath-coordinated, and closely monitored to ensure safety.

Chair Asanas & Mild Warm-Up (5–7 minutes)

The session began with simple loosening movements performed in a seated position to:

- Improve circulation
- Reduce stiffness
- Prepare the body for further practice
- Gradually activate the cardiovascular system

Movements were slow and synchronized with breathing.

Hand Stretching (Side, Front, Upward) (5–7 minutes)

Performed while sitting on a chair.

- ✓ Hands stretched forward with inhalation
- ✓ Side stretching for thoracic expansion
- ✓ Upward stretch to open chest and shoulders

Benefits:

-  Improves shoulder mobility
-  Enhances lung expansion
-  Encourages proper breathing pattern
-  Supports circulation in upper limbs

Utkatasana with Chair (5 minutes)

Supported chair squat (holding chair for balance).

Benefits:

- ❖ Strengthens lower limbs
- ❖ Improves circulation
- ❖ Enhances muscular endurance

❖ Safe functional strengthening for cardiac participants
Breathing was maintained normally without strain.

Trikonasana with Chair Support (5 minutes)

Modified side bending posture using chair support.

Benefits:

- ✓ Improves lateral spinal flexibility
- ✓ Expands rib cage
- ✓ Enhances lung capacity
- ✓ Improves balance safely

Hip Twisting / Bhu Namanasana (5–7 minutes)

Gentle seated twisting or forward bending with awareness.

Benefits:

- Improves spinal mobility
- Stimulates abdominal organs
- Supports digestion
- Enhances pranic flow

Movements were mild to avoid strain.

Neck Exercises (5 minutes)

- Forward & backward bending
- Side bending
- Gentle rotation

Benefits:

- ★ Reduces cervical stiffness
- ★ Improves blood circulation to brain
- ★ Relieves stress and tension

Uttanasana with Chair (5 minutes)

Supported forward bending using chair.

Benefits:

- Improves blood circulation
- Relieves back stiffness
- Encourages relaxation

Cardiac participants performed this slowly without holding breath.

Marjariasana with Chair (5 minutes)

Seated or supported cat–cow movement.

Benefits:

- ✓ Improves spinal flexibility

- ✓ Enhances breathing coordination
- ✓ Mobilizes thoracic region

Very beneficial for pulmonary participants.

Shavasana / DRT (Deep Relaxation Technique) (8–10 minutes)

The session concluded with Shavasana or DRT.

Benefits:

- ✓ Activates parasympathetic response
- ✓ Reduces heart rate
- ✓ Improves oxygen utilization
- ✓ Deep mental relaxation

Participants were guided to observe breath and relax each body part systematically.

Overall Session Objective

- Improve circulation
- Enhance respiratory efficiency
- Strengthen muscles safely
- Reduce stress load on heart
- Promote pranic balance

All practices were adapted according to participant capacity and medical condition.

Śānti Mantra

The session concluded with the chanting of the peace mantra:

सर्वे जनाः सुखिनो भवन्तु ।
सर्वे सन्तु निरामयाः ।
सर्वे भद्राणि पश्यन्तु ।
मा कश्चिद् दुःखभाग्भवेत् ।
ॐ शान्तिः शान्तिः शान्तिः ॥

This mantra invoked peace at the physical, mental, and spiritual levels.

7:00 AM – 8:00 AM: Maitri Milan

Maitri Milan was conducted as a **group spiritual session**, promoting emotional bonding and mental positivity. The session included:

- ✓ Bhajans
- ✓ Hanuman Chalisa
- ✓ Selected verses from the Bhagavad Gita

This session created a devotional atmosphere, reducing stress and fostering emotional balance, which is essential for digestive health.

8:00 AM – 9:00 AM: Breakfast

A **sattvic breakfast** was served, supporting digestion and aligning with yogic dietary principles followed at Arogyadhama.

9:00 AM – 9:50 AM: Parameters and Consultation

Date: 9th February 2026

Section: B-Section

Place: SVYASA Arogyadhama

Case Study: 1

1. Participant Profile

Parameter	Details
Name	*****
Age	44 years
Gender	Female
Occupation	Homemaker
Date of Admission	27/01/2026
Date of Discharge	02/02/2026
Section	B-Section (Pulmonology with Metabolic Involvement)

2. Chief Complaints

- Allergic rhinitis since 7 years

- Chronic nasal congestion
- Breathlessness on exertion
- Fatigue
- History of Type II Diabetes Mellitus

3. History of Present Illness

The participant presented with long-standing allergic rhinitis characterized by recurrent nasal congestion and breathing difficulty. Over the years, symptoms progressed with episodes of breathlessness, especially during exertion and seasonal changes. She had a history of gestational diabetes, which later developed into Type II Diabetes Mellitus.

The condition was associated with fatigue, heaviness in the head, and reduced tolerance for physical activity.

4. Diagnosis

- ✓ Allergic Rhinitis
- ✓ Type II Diabetes Mellitus
- ✓ Pulmonary involvement with reduced respiratory efficiency

5. Parameters Assessment

Baseline Parameters (On Admission)

Sl. No	Parameter	Observation	Remarks
1	Blood Pressure	130/80 mmHg	Within acceptable range
2	Pulse Rate	86 bpm	Mildly elevated
3	Respiratory Rate	20 breaths/min	Slightly increased
4	SpO ₂	96%	Normal
5	Weight	70 kg	Overweight
6	Height	153 cm	—
7	BMI	~29.9 kg/m ²	Overweight category
8	FBS	Elevated	Type II DM
9	PPBS	Elevated	Needs regulation
10	Fatigue Level	Moderate	Participant reported tiredness
11	Nasal Congestion	Present	Chronic

Sl. No	Parameter	Observation	Remarks
12	Breathlessness	Present	On exertion

Parameters at Discharge

Sl. No	Parameter	Observation	Improvement
1	Blood Pressure	124/78 mmHg	Stable
2	Pulse Rate	78 bpm	Reduced
3	Respiratory Rate	16–18 breaths/min	Improved
4	SpO ₂	97–98%	Slight improvement
5	Weight	69 kg	Mild reduction
6	BMI	Slight reduction	Positive trend
7	FBS	Improved control	Stabilizing
8	PPBS	Improved	Better regulation
9	Fatigue Level	Mild	Reduced
10	Nasal Congestion	Reduced	Symptomatic relief
11	Breathlessness	Reduced	Improved tolerance

6. Yoga Therapy Intervention (IAYT – S-VYASA Model)

Annamaya Kosha (Physical Level)

- ✓ Chair-based asanas
- ✓ Hand stretching (front, side, upward)
- ✓ Utkatasana with chair
- ✓ Trikonasana with support
- ✓ Marjariasana
- ✓ Gentle loosening practices

Pranamaya Kosha

- Sectional breathing
- Nadi Shuddhi Pranayama
- Bhramari Pranayama

- Diaphragmatic breathing

Manomaya Kosha

- ❖ Om chanting
- ❖ DRT (Deep Relaxation Technique)
- ❖ PET (Pranic Energization Technique)

Vijnanamaya & Anandamaya Kosha

- Counseling
- Positive Sankalpa
- Bhakti sessions

7. Naturopathy Interventions

- Steam inhalation (for rhinitis relief)
- Mud pack (abdomen / sinus region)
- Hydrotherapy sessions
- Reflexology
- Naturopathic dietary support

8. Diet Plan

Recommended:

- 🌱 Boiled vegetables
- 🌱 Leafy greens
- 🌱 Millets and whole grains
- 🌱 Sprouts
- 🌱 Low glycemic fruits
- 🌱 Herbal drinks (cumin/coriander water)

Avoid:

- Refined sugar
- Deep fried food
- Bakery products
- Excess spicy and processed foods

Emphasis was placed on anti-inflammatory and diabetic-friendly nutrition.

9. Progress During Stay

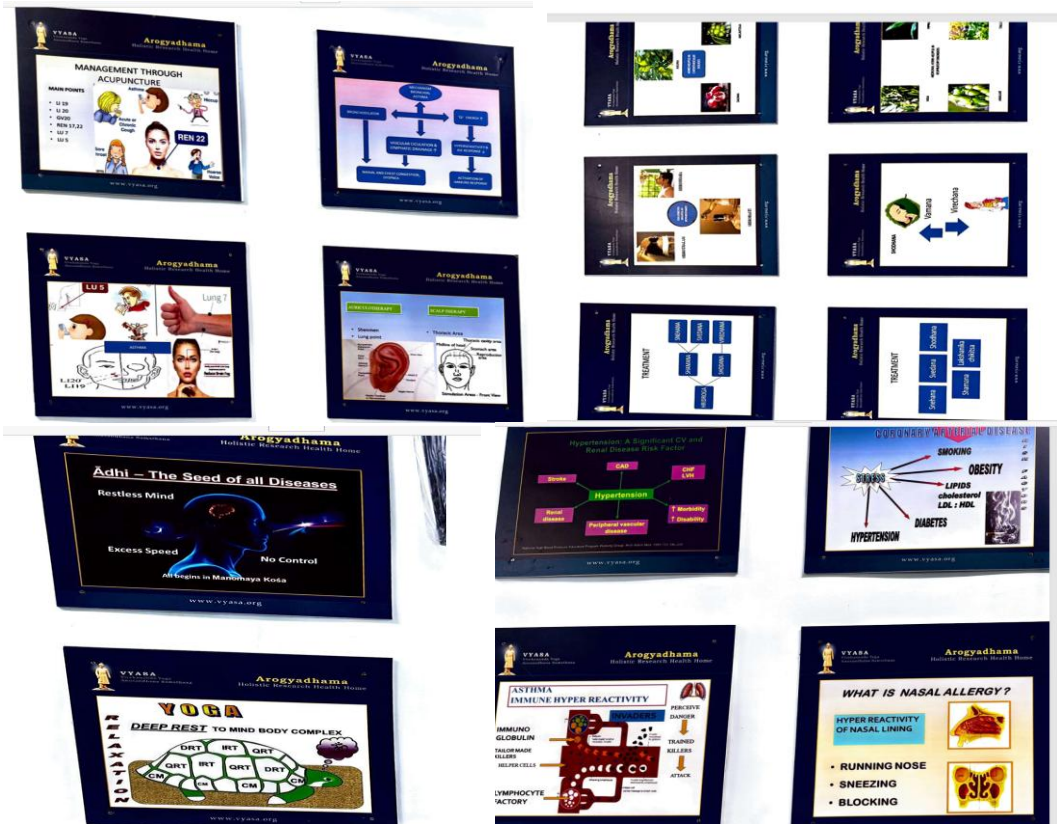

- ❖ Improved breathing efficiency
- ❖ Reduced nasal congestion
- ❖ Better energy levels
- ❖ Improved sleep quality
- ❖ Reduced stress levels
- ❖ Improved glycemic control

Participant reported feeling lighter, calmer, and more confident in managing her condition.

10. Discharge Advice

- ✓ Continue daily pranayama practice
- ✓ Practice chair-based asanas regularly

- ✓ Follow diabetic diet strictly
- ✓ Regular 15–20 minutes walking
- ✓ Bhramari before sleep
- ✓ Periodic monitoring of blood sugar

10:15 AM – 12:00 PM: Research Lab Visit – S-VYASA

On Monday, instead of the regular lecture session, we visited the Research Laboratory at S-VYASA (Anvesana Research Laboratories). The visit provided valuable exposure to ongoing scientific research integrating yoga with modern medical technology.

During the visit, the research team explained various neuro-technological developments and instruments used for clinical and experimental studies. The lab focuses on objective measurement of physiological and neurological changes induced by yoga practices.

Key Observations from the Research Lab Visit:

1. Neurophysiological Assessment Tools

- ✓ EEG (Electroencephalography) systems to measure brain wave activity
- ✓ Instruments to study cognitive function and neural responses
- ✓ Devices for monitoring autonomic nervous system activity

These tools help in assessing changes in brain function during meditation, pranayama, and relaxation techniques.

2. Doppler Sonography

We observed Doppler Sonography systems used to assess cerebral blood flow.

This technology helps measure:

-  Blood circulation in brain arteries
-  Vascular resistance
-  Changes in cerebral perfusion during yoga practices

This is particularly useful in neurological research and stroke rehabilitation studies.

3. Body Composition Analyzer (InBody)

The InBody machine was demonstrated for measuring:

- ✓ Body fat percentage
- ✓ Muscle mass
- ✓ Visceral fat
- ✓ Basal metabolic rate

This is helpful in lifestyle disorders such as obesity, diabetes, and cardiovascular conditions.

4. Respiratory & Pulmonary Assessment Devices

Pulmonary function testing devices were shown to assess:

- ★ Lung capacity
- ★ Respiratory strength
- ★ Airflow patterns

These are especially relevant for Pulmonology research and pranayama studies.

5. Biochemistry & Laboratory Research Section

The lab facilities included:

- Sample processing equipment
- Blood parameter analysis setup
- Research data recording systems

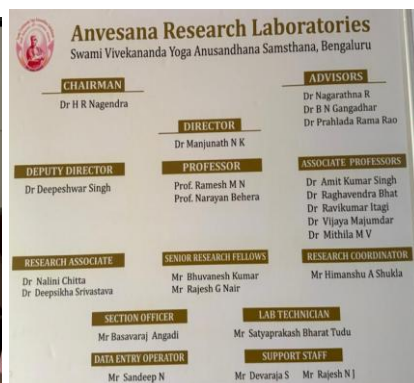

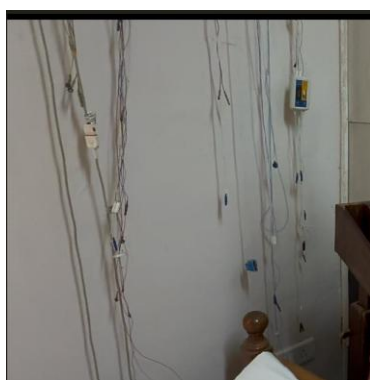

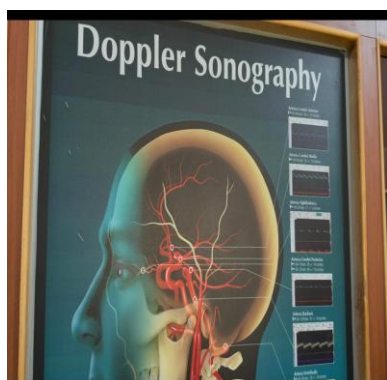

This section supports studies on metabolic disorders, inflammation markers, and stress hormones.

Learning Outcome

The visit highlighted how S-VYASA integrates traditional yoga practices with evidence-based scientific validation. The research lab plays a crucial role in demonstrating measurable physiological, neurological, and metabolic benefits of yoga therapy.

The exposure enhanced understanding of:

- ❖ Objective parameter measurement
- ❖ Research methodology in yoga therapy
- ❖ Neurotechnology applications in meditation studies
- ❖ Clinical validation of yogic interventions

EEG electrode leads / recording cables

Neurophysiology recording system

Electroencephalography cap

Conclusion

The research lab visit was highly informative and provided insight into the scientific foundation of yoga therapy at S-VYASA. It reinforced the importance of combining traditional yogic wisdom with modern neurotechnology and biomedical research to establish yoga as a validated complementary healthcare system.

12:00 PM – 1:00 PM: Special Technique

Standing Exercises Session – Detailed Explanation

The session consisted of slow, controlled standing practices designed to improve circulation, coordination, flexibility, and balance. All movements were performed gently with breath awareness.

Standing Exercises (Slow Warm-Up)

The session began with slow standing movements to prepare the body.

Purpose:

- ✓ Increase blood circulation
- ✓ Activate major muscle groups
- ✓ Prepare joints for further practice

Breathing was kept natural and synchronized with movement.

Hand Stretching (Side, Front, Upward)

Hands were stretched:

- ✓ Forward with inhalation
- ✓ Sideways for lateral expansion
- ✓ Upward for full body stretch

Benefits:

- ✚ Expands chest cavity
- ✚ Improves shoulder mobility
- ✚ Enhances lung expansion
- ✚ Improves posture

Jogging / Drill (Knee to Chest Level – 90° Right & Left)

Slow marching or jogging in place:

- Knee lifted to chest level
- Alternate right and left
- Controlled pace

Benefits:

- ★ Improves coordination
- ★ Strengthens lower limbs
- ★ Enhances cardiovascular activation
- ★ Improves hip mobility

Hands Lifting Upward One by One

Alternate arm raising:

- ❖ Inhale while lifting
- ❖ Exhale while lowering

Benefits:

- ✓ Improves neuromuscular coordination
- ✓ Enhances breathing rhythm
- ✓ Reduces stiffness

Single Leg Movements (Foot, Toes, Ankle Exercises)

Includes:

- ✓ Toe lifting
- ✓ Heel lifting
- ✓ Ankle flexion and extension

Benefits:

1. Improves balance
2. Enhances peripheral circulation
3. Strengthens ankle joints
4. Prevents stiffness

Utkatasana (Slowly)

Modified chair pose performed slowly.

Benefits:

- Strengthens thighs
- Improves lower limb endurance
- Enhances functional strength

Precaution: No breath holding.

Ankle Stretching (Standing)

Ankle flexion and pointing movements while standing.

Benefits:

- Improves joint mobility
- Prevents cramps
- Enhances venous return

Leg Raising (Front – 10, Back – 10, Side – 10 Times)

One leg lifted:

- Forward
- Backward
- Sideways

Benefits:

- ✓ Strengthens hip muscles
- ✓ Improves balance
- ✓ Enhances joint flexibility

Performed slowly without jerky movements.

Leg Swinging (One by One – Slightly)

Gentle swinging of each leg.

Benefits:

- ✚ Improves dynamic flexibility
- ✚ Loosens hip joints
- ✚ Enhances coordination

Circling the Leg (Clockwise & Anticlockwise)

Hip rotation movements.

Benefits:

- ❖ Improves hip joint mobility
- ❖ Enhances circulation
- ❖ Reduces stiffness

Hold the Feet Back Side (One by One)

Standing quadriceps stretch (holding ankle behind).

Benefits:

-  Stretches thigh muscles
-  Improves balance
-  Enhances flexibility

DRT (Deep Relaxation Technique)

The session concluded with DRT.

Benefits:

- Reduces heart rate
- Activates parasympathetic system
- Improves mental calmness
- Integrates physical effort with relaxation

Overall Objective of the Session

- ✓ Improve circulation
- ✓ Enhance lower limb strength
- ✓ Increase flexibility
- ✓ Improve balance and coordination
- ✓ Prepare body for therapeutic practices
- ✓ Reduce stress

1:00 PM – 2:00 PM: Lunch

A balanced **sattvic lunch** was provided, supporting digestive health and recovery.

2:00 PM – 2:30 PM: Rest

A short rest period was given to allow digestion and physical recovery.

2:30 PM – 3:10 PM: MSRT (Mind Sound Resonance Technique)

MSRT (Mind Sound Resonance Technique) was conducted as part of the routine daily schedule. Since the procedure and details were already documented in the previous days' internship notes, the same were repeated and followed accordingly.

Pranayama practices were conducted as per the regular daily schedule. Since the techniques and procedures were already documented in the previous internship notes, the same routine was followed.

4:00PM to 5:00PM Special Technique - Chair Asanas & Mild Exercises

(Duration approx. 45–60 minutes)

This session consisted of chair-supported asanas and mild joint movements designed for patients with cardiac, pulmonary, or general weakness conditions. All movements were performed slowly with breath awareness and without strain.

Chair Asanas & Mild Warm-Up

The session began with gentle seated movements to:

- Improve circulation
- Reduce stiffness
- Prepare the body safely
- Gradually activate muscles

Breathing was synchronized with movement.

Hand Stretching (Front, Back, Upward)

Hands were stretched:

-  Forward (chest level)
-  Backward (opening chest)
-  Upward (full body stretch)

Benefits:

- ❖ Expands rib cage
- ❖ Improves shoulder flexibility
- ❖ Enhances lung expansion
- ❖ Improves posture

Neck Stretching

Included:

- ✓ Forward bending
- ✓ Backward bending
- ✓ Side bending
- ✓ Gentle rotation

Benefits:

- Reduces cervical stiffness
- Improves blood flow to brain
- Relieves stress and tension

Movements were slow to avoid dizziness.

Utkatasana (Supported / Chair-Based)

Modified chair squat or supported pose.

Benefits:

- ✓ Strengthens thigh muscles
- ✓ Improves lower limb endurance
- ✓ Enhances functional strength
- ✓ Improves circulation

No breath holding was allowed.

Fingers & Wrist Exercises

Included:

- ✓ Finger opening & closing
- ✓ Wrist rotation (clockwise & anticlockwise)

Benefits:

- Improves joint mobility
- Enhances peripheral circulation
- Reduces stiffness (especially in elderly patients)

Shoulder Stretching & Rotation

Shoulder lifting, rotation, and stretching movements.

Benefits:

- Improves shoulder mobility
- Reduces tension
- Enhances chest expansion
- Improves posture

Toes & Ankles Stretching

Included:

- ★ Toe bending
- ★ Ankle flexion & extension
- ★ Ankle rotation

Benefits:

- ✚ Improves balance
- ✚ Enhances venous return
- ✚ Prevents cramps
- ✚ Reduces swelling

Knee Movement & Rotation

Gentle knee bending and rotation while seated or standing.

Benefits:

- ✓ Maintains knee joint mobility
- ✓ Reduces stiffness
- ✓ Strengthens surrounding muscles

Setubandhasana (Bridge Pose – Modified)

Performed gently (possibly supported).

Benefits:

- Improves spinal flexibility
- Enhances lung capacity
- Strengthens back muscles
- Improves circulation

Lumbar Stretching

Gentle lower back stretching.

Benefits:

- Relieves lower back pain
- Improves spinal mobility
- Reduces muscular tension

DRT (Deep Relaxation Technique)

The session concluded with DRT.

Benefits:

- Activates parasympathetic system
- Reduces heart rate
- Improves oxygen efficiency
- Provides mental calmness
- Integrates physical practice with relaxation

Overall Objective of the Session

- Improve joint mobility
- Enhance circulation
- Support respiratory efficiency
- Strengthen muscles safely
- Reduce stress
- Prepare body for therapeutic healing
- Or add kosha-wise therapeutic understanding

5:00 PM – 6:00 PM: Evening Snacks

Light refreshments were provided.

6:00 PM – 6:30 PM: Bhajans

Evening bhajans were conducted, creating a peaceful and devotional environment.

Trāṭaka and Cyclic Meditation sessions were conducted as per the regular daily schedule. Since the procedures and methodology had already been detailed in the previous days' internship notes, the same practices were repeated accordingly.

A light and sattvic dinner was served.

The day concluded with an **inspirational lecture by Guruji**, focusing on yogic philosophy, discipline, and holistic living.

The day concluded with a sense of physical relaxation, mental clarity, and spiritual upliftment. Exposure to B-Section (Cardiology & Pulmonology) provided valuable insights into the application of yoga therapy for cardiovascular and respiratory disorders through structured practices, breath regulation, relaxation techniques, and lifestyle modification. The systematic schedule and therapeutic approach reinforced the role of yoga as an effective complementary healthcare system in supporting heart and lung health.

Date: 10th February 2026

Specialty: Cariology & Pulmonology

Place: SVYASA Arogyadhama

On the tenth day of the internship, we continued in B-Section (Cardiology & Pulmonology). The schedule and therapeutic sessions remained the same as per the previous days. However, new case studies were observed and documented for clinical learning and analysis.

Date: 10th February 2026

Place: SVYASA Arogyadhama

Case Study: 1

Department: B-Section

Patient Profile

Parameter	Details
Name	*****
Age / Gender	61 years / Male
Occupation	Retired GST Officer
Education	MSc
Accommodation	In-patient
IP No	(As per record)

Chief Complaints

- ✓ Hypertension since 8 years
- ✓ Glaucoma (Primary) – since 2025
- ✓ Hypothyroidism since 2001
- ✓ Bleeding per rectum (history – 10 years)
- ✓ Constipation since 10 years

History of Present Illness

- Known case of hypertension under medication
- Diagnosed with primary glaucoma (on eye drops)
- Complaints of headache and eye strain
- Constipation with irregular bowel habits
- Stress related to lifestyle and retirement transition

Past History

- ✓ Glaucoma (Aug 2025) – on eye drops
- ✓ Cholecystitis – Sept 2025
- ✓ Hypothyroidism (long-standing)

Family History

- Father – Hypertension
- No known DM/TB/BA

Clinical Parameters (On Admission)

Parameter	Value
Height	164 cm
Weight	76 kg
BMI	~28 (Overweight)

Parameter	Value
Pulse Rate	80 bpm
Blood Pressure	140/90 mmHg
Fasting Blood Sugar	~109 mg/dl
HbA1c	Borderline elevated
Lipid Profile	Mildly elevated cholesterol
Intraocular Pressure	Elevated (Glaucoma case)

Medications

Condition	Medicine	Dosage
Hypertension	Telmisartan 40 mg	OD
Hypothyroidism	Thyroxine	Morning empty stomach
Glaucoma	Timolol Eye Drops	1 drop BD

Yoga Therapy Protocol (B-Section)

For Hypertension

- ❖ Sukshma Vyayama
- ❖ Gentle Chair Asanas
- ❖ Tadasana (modified)
- ❖ Ardha Kati Chakrasana
- ❖ Setubandhasana (supported)
- ❖ Vakrasana
- ❖ Shavasana

Breathing Practices

- Sectional breathing
- Nadi Shuddhi
- Bhramari
- Chandra Anuloma Viloma
- Om chanting
- MSRT
- Cyclic Meditation

Relaxation & Mind Practices

- DRT
- Yoga Nidra
- Trataka (mild, avoided strain)

- Meditation (breath awareness)

Naturopathy Treatments

- ✓ Mud pack to abdomen
- ✓ Eye pack (for glaucoma relaxation)
- ✓ Jal Neti (as advised)
- ✓ Enema (for constipation)
- ✓ Hip bath
- ✓ Steam bath (mild)
- ✓ Reflexology
- ✓ Acupressure

Diet Plan (Naturopathy Diet Chart)

- ★ Early Morning: Warm water + lemon
- ★ Breakfast: Fruits / vegetable juice
- ★ Lunch: Brown rice + boiled vegetables + dal
- ★ Evening: Herbal tea
- ★ Dinner: Light soup / salad
- ★ Low salt diet
- ★ Oil-free / minimal oil
- ★ Avoid caffeine and fried food

Progress During Stay

- BP reduced gradually (140/90 → 130/85 mmHg)
- Stress levels reduced
- Improved sleep
- Better bowel regularity
- Eye strain reduced
- Weight reduced slightly (~1–2 kg)
- Improved sense of calmness

Discharge Summary

The patient completed the integrated yoga therapy program successfully. Significant improvement was observed in blood pressure control, stress reduction, and bowel regularity. The patient reported improved mental clarity, reduced eye strain, and better sleep quality.

Advice on Discharge:

- ✚ Continue prescribed medication
- ✚ Practice yoga daily (45 minutes)
- ✚ Follow low-salt, satvic diet
- ✚ Regular BP monitoring
- ✚ Ophthalmology follow-up for glaucoma
- ✚ Maintain stress management practices

10:10 AM – 11:00 PM: Lecture – Anandamaya Kosa

Faculty: Karibasappa Sir

The session was conducted by Karibasappa Sir on the concept of **Anandamaya Kosa**, the innermost sheath described in the Panchakosha model. He explained that Anandamaya Kosa represents the bliss layer of existence, beyond the physical body (Annamaya), pranic body (Pranamaya), mental body (Manomaya), and intellectual body (Vijnanamaya).

Sir emphasized that this sheath is experienced in deep meditation, selflessness, and moments of pure joy where the ego dissolves. It is not merely emotional happiness but a state of inner contentment and spiritual fulfillment. Through regular practice of meditation, devotion (Bhakti), and self-awareness, one can gradually access this deeper layer of consciousness.

The lecture highlighted how yoga therapy ultimately aims not only at disease management but at leading the individual toward inner harmony and bliss at the level of Anandamaya Kosa.

11:00 AM – 12:00 PM: Self-Study (Male Interns)

Male interns utilized this time for **self-study** by visiting the library and referring to:

- ✓ Yoga therapy theses
- ✓ Dissertations
- ✓ Yoga Itihasa
- ✓ Classical yogic texts

This session enhanced theoretical understanding and research orientation.

12:00 PM – 1:00 PM: Special Technique

The special techniques session was conducted from 12:00 PM to 1:00 PM. The same set of therapeutic practices as followed in the previous days was repeated according to the prescribed schedule.

1:00 PM – 2:00 PM: Lunch

A balanced **sattvic lunch** was provided, supporting digestive health and recovery.

2:00 PM – 2:30 PM: Rest

A short rest period was given to allow digestion and physical recovery.

2:30 PM – 3:10 PM: MSRT (Mind Sound Resonance Technique)

MSRT (Mind Sound Resonance Technique) was conducted as part of the routine daily schedule. Since the procedure and details were already documented in the previous days' internship notes, the same were repeated and followed accordingly.

Pranayama practices were conducted as per the regular daily schedule. Since the techniques and procedures were already documented in the previous internship notes, the same routine was followed.

4:00PM to 5:00PM Special Technique - Chair Asanas & Mild Exercises

The special techniques session was conducted from 4:00 PM to 5:00 PM. The same set of therapeutic practices as followed in the previous days was repeated according to the prescribed schedule.

5:00 PM – 6:00 PM: Evening Snacks

Light refreshments were provided.

6:00 PM – 6:30 PM: Bhajans

Evening bhajans were conducted, creating a peaceful and devotional environment.

6:40 PM – 7:40 PM: Trāṭaka and Cyclic Meditation

Trāṭaka and Cyclic Meditation sessions were conducted as per the regular daily schedule. Since the procedures and methodology had already been detailed in the previous days' internship notes, the same practices were repeated accordingly.

7:50 PM – 8:30 PM: Dinner

A light and sattvic dinner was served.

8:30 PM – 9:00 PM: Lecture by Guruji

The day concluded with an **inspirational lecture by Guruji**, focusing on yogic philosophy, discipline, and holistic living.

Conclusion of the Day

The day concluded with a sense of physical relaxation, mental clarity, and spiritual upliftment. Exposure to B-Section (Cardiology & Pulmonology) provided valuable insights into the application of yoga therapy for cardiovascular and respiratory disorders through structured practices, breath regulation, relaxation techniques, and lifestyle modification. The systematic schedule and therapeutic approach reinforced the role of yoga as an effective complementary healthcare system in supporting heart and lung health.

~~~~~

## Day 9 – C Section

**Date:** 11<sup>th</sup> February 2026

**Section:** C-Section

**Specialty:** Psychology

**Place:** SVYASA Arogyadhama

On the ninth day of the internship, we were posted in the **Psychology Section**. This section focuses on understanding the mental, emotional, and behavioural aspects of health and disease.

The session emphasized how psychological factors such as stress, anxiety, depression, fear, anger, and unresolved emotions contribute significantly to lifestyle disorders like hypertension, diabetes, asthma, neurological disorders, and even cancer.

Various psychological assessment tools are used to evaluate:

- ✓ Stress levels
- ✓ Anxiety and depression scales
- ✓ Personality patterns
- ✓ Sleep disturbances
- ✓ Emotional instability

The importance of counselling, cognitive restructuring, relaxation techniques, meditation, and mindfulness practices was highlighted. Yoga therapy in this section mainly works at the **Manomaya Kosa (mental sheath)** and gradually helps stabilize emotions and improve coping capacity.

The session reinforced that true healing requires integration of body, breath, mind, intellect, and bliss — aligning with the Panchakosha model.

### **Schedules**

All the morning sessions were conducted as per the regular schedule. Since the practices and procedures had already been documented in the previous days' entries, the same routine was repeated accordingly.

### **06:00AM to 07:00AM Special Technique**

The special technique session was designed to improve **strength, flexibility, coordination, cardiovascular endurance, and neuromuscular balance**. The practices were performed initially slowly, then with increased speed, and finally followed by relaxation.

### **Loosening & Warm-Up (Slow → Speed Variation)**

- ✓ **Hand Stretching** – Front, side, upward movements to mobilize shoulder and arm joints.
- ✓ **Stand on Toes** – Improves calf strength and balance.
- ✓ **Shoulder Twisting** – Enhances shoulder mobility and reduces stiffness.
- ✓ **Hip Twisting & Rotation** – Improves spinal flexibility and pelvic mobility.

Purpose:

- ★ Activates circulation

- ★ Warms up muscles
- ★ Prevents injury

### **Jogging (Slow → Fast)**

- Forward jogging
- Backward jogging
- Side jogging

Purpose:

- Improves cardiovascular endurance
- Enhances coordination
- Increases lung capacity
- Activates sympathetic discharge followed by relaxation response

### **Core & Strengthening Practices**

- ❖ **Sit-ups (Full)** – Strengthens abdominal muscles
- ❖ **Crunches** – Core activation
- ❖ **Leg Raising (90° each)** – Strengthens lower abdomen
- ❖ **Cycling (Supine)** – Improves hip mobility and abdominal tone

Purpose:

- Strengthens core muscles
- Supports spine stability
- Improves metabolic activity

### **Standing Asanas**

- ✓ **Ardha Kati Chakrasana** – Side bending improves spinal flexibility
- ✓ **Vrikshasana** – Enhances balance and neuromuscular coordination

Purpose:

- Improves posture
- Develops concentration
- Enhances lower limb stability

### **Prone & Back Strengthening**

- ✓ **Makarasana** – Deep relaxation for lower back
- ✓ **Shalabhasana** – Strengthens posterior chain muscles
- ✓ **Bhujangasana** – Opens chest, improves spinal extension
- ✓ **Setubandhasana** – Strengthens gluteal muscles and improves circulation

Purpose:

- ✚ Improves back strength
- ✚ Corrects postural imbalance
- ✚ Enhances respiratory efficiency

### **Deep Relaxation Technique (DRT)**

The session concluded with **DRT** to normalize:

- ✓ Heart rate
- ✓ Respiratory rate

- ✓ Muscle tension
- ✓ Mental agitation

This ensures parasympathetic dominance and restores balance.

### Clinical Significance

This special technique is beneficial in:

- Obesity
- Diabetes
- Hypertension (with moderation)
- Depression
- Anxiety
- Musculoskeletal stiffness
- De-addiction cases (improves dopamine regulation naturally)

It combines **dynamic activation + strengthening + flexibility + relaxation**, making it a complete therapeutic module.

### 9:00 AM – 9:50 AM: Parameters and Consultation

**Date:** 11<sup>th</sup> February 2026

**Section:** Psychology / De-addiction

**Diagnosis:** Alcohol Dependence Syndrome

Case Study -1

### Participant Details

|                   |                 |
|-------------------|-----------------|
| Name              | *****           |
| Age / Gender      | 56 years / Male |
| Occupation        | IT Employee     |
| Marital Status    | Married         |
| Address           | Bangalore       |
| Date of Admission | 28/01/2026      |
| Date of Discharge | 31/01/2026      |

### Chief Complaints

- ✓ History of alcohol use for many years
- ✓ Recent rehabilitation stay (8 months)
- ✓ Stiffness and pain in ankle & calf (4–5 months)
- ✓ Sleep disturbances

### History of Present Illness

A 56-year-old male with long-standing alcohol consumption. He had undergone rehabilitation at NIMHANS and was on medication. Complained of ankle stiffness and pain for 4–5 months. Approached Arogyadhama for holistic management and relapse prevention.

### Past History

- ❖ Alcohol dependence
- ❖ Hypercholesterolemia (1 year)
- ❖ No DM/HTN reported
- ❖ Psychiatric evaluation done

### Stress / Social History

- ✓ Work-related stress
- ✓ Financial concerns
- ✓ Emotional stress contributing to alcohol use

### Clinical Parameters

| Parameter        | On Admission | At Discharge |
|------------------|--------------|--------------|
| Pulse            | 63 bpm       | 68 bpm       |
| Blood Pressure   | 112/78 mmHg  | 130/80 mmHg  |
| Respiratory Rate | 12 cpm       | 14 cpm       |
| Height           | 170 cm       | —            |
| Weight           | 76.6 kg      | 76.1 kg      |
| BMI              | 26.5         | 26.3         |
| Symptom Score    | 1            | 0            |
| Sleep            | Disturbed    | Sound sleep  |
| Bowel            | Normal       | Normal       |

### Medications

| Medicine              | Dosage |
|-----------------------|--------|
| Tab. Topiramate 50 mg | 1-0-1  |
| Tab. Atorva 20 mg     | 0-0-1  |
| Tab. Neurobion        | 1-0-1  |

### Yoga Therapy Intervention

### Physical Practices

- ✚ Sukshma Vyayama
- ✚ Annamaya Kosha practices
- ✚ Stretching for ankle & calf
- ✚ Loosening exercises
- ✚ Walking meditation

### **Pranayama**

- Sectional breathing
- Nadi Shuddhi
- Bhramari
- Deep diaphragmatic breathing

### **Mind Practices**

- ✓ MSRT
- ✓ Cyclic Meditation
- ✓ Om chanting
- ✓ Guided meditation
- ✓ Counseling sessions
- ✓ Relapse prevention awareness

### **Naturopathy Treatments (Page 3)**

- ❖ Barefoot walking
- ❖ Sun bath
- ❖ Prayer sessions
- ❖ Neutral shower
- ❖ Hot foot immersion with Epsom salt
- ❖ Neutral abdomen pack

### **Diet Pattern:**

- ✓ Normal/Naturopathy diet
- ✓ Early morning lemon honey water
- ✓ Green tea
- ✓ Vegetable juices
- ✓ Boiled vegetables
- ✓ Brown rice / chapati
- ✓ Fruits (apple, guava, muskmelon)
- ✓ Avoid: tea/coffee, fried food, junk food, processed sugar
- ✓ Reduce salt & oil intake

### **Progress Observed**

- Sleep improved
- No withdrawal symptoms during stay
- Reduced anxiety
- Improved bowel habits
- Stable vitals
- Increased emotional stability
- Motivation for alcohol abstinence

## Discharge Summary

The participant completed the integrated yoga therapy program successfully. There was noticeable improvement in sleep quality, emotional balance, and physical comfort. The structured combination of yoga practices, counseling, naturopathy, and dietary regulation supported relapse prevention and stress management.

### Advice at Discharge:

- ★ Continue medication as prescribed
- ★ Practice daily yoga (45–60 minutes)
- ★ Attend counseling regularly
- ★ Maintain satvic diet
- ★ Follow-up after 3 months
- ★ Avoid stress triggers

### Clinical Insight

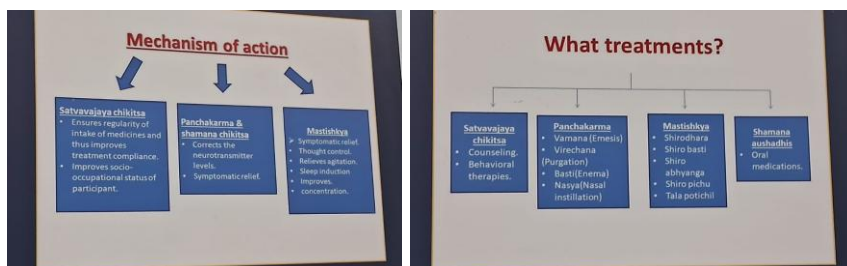

This case highlights the role of **Integrated Yoga Therapy in Alcohol Dependence Syndrome**, addressing:

- Physical cravings
- Psychological triggers
- Stress management
- Emotional regulation
- Autonomic stabilization

Yoga therapy supports healing at the **Manomaya & Vijnanamaya Kosa levels**, aiding long-term behavioral change.

Checking the parameters for participant

## 10:10 AM – 11:00 PM: Lecture – Anandamaya Kosa

**Faculty:** Karibasappa Sir

**Topic:** Understanding the Intellectual Sheath

The session focused on **Vijnanamaya Kosa**, the fourth sheath in the Panchakosha model. This kosa represents the layer of *intellect, discrimination (Viveka), wisdom, values, and decision-making capacity*. It governs our ability to analyze, judge, and choose between right and wrong.

While Manomaya Kosa (mental sheath) deals with emotions and thoughts, Vijnanamaya Kosa is responsible for clarity, reasoning, and inner guidance.

### Key Points Explained

- ✓ It is the seat of **Buddhi (intellect)**
- ✓ Responsible for **self-reflection and awareness**
- ✓ Controls impulses arising from the mind
- ✓ Plays a crucial role in lifestyle choices
- ✓ Influences habits, addictions, and behavior patterns

When Vijnanamaya Kosa is weak:

- Poor decision-making
- Addictions
- Emotional impulsivity
- Lack of clarity
- Stress mismanagement

When it is strong:

- Self-discipline
- Moral strength
- Clarity in life goals
- Emotional balance
- Resilience under stress

### Clinical Relevance in Yoga Therapy

- ★ Addiction
- ★ Anxiety disorders
- ★ Depression
- ★ Hypertension
- ★ Lifestyle disorders

The problem is often not only emotional (Manomaya) but also due to impaired discrimination and weak willpower.

Yoga strengthens Vijnanamaya Kosa through:

- Swadhyaya (self-study)
- Meditation
- Counseling

- Value-based discussions
- Bhagavad Gita teachings
- Awareness practices
- Mindfulness

As clarity improves, patients begin to:

- Take responsibility for health
- Avoid harmful habits
- Regulate lifestyle
- Make conscious choices

#### **11:00 AM – 12:00 PM: Self-Study (Male Interns)**

Male interns utilized this time for **self-study** by visiting the library and referring to:

- ✓ Yoga therapy theses
- ✓ Dissertations
- ✓ Yoga Itihasa
- ✓ Classical yogic texts

This session enhanced theoretical understanding and research orientation.

#### **12:00 PM – 1:00 PM: Special Technique**

The second special technique session focused on **joint mobility, spinal flexibility, hip opening, abdominal strengthening, and neuromuscular coordination**, followed by controlled transitions between postures.

##### **Neck & Upper Body Mobilization**

###### **Neck Stretching**

Gentle forward, backward, lateral and rotational movements.

Relieves cervical stiffness and improves blood circulation to the brain.

###### **Hand Stretching**

Front, side, and upward movements.

Activates shoulder girdle and improves coordination.

###### **Shoulder Rotation & Stretching**

Clockwise and anticlockwise rotations.

Reduces upper back tension and improves scapular mobility.

###### **Waist Twisting**

Gentle spinal rotations in standing/sitting.

Improves thoracic mobility and digestion.

##### **Standing Asana**

###### **Ardha Kati Chakrasana**

Side bending posture.

Improves lateral spinal flexibility, stretches intercostal muscles, enhances lung expansion.

## Hip & Groin Opening

### Baddha Konasana (Butterfly Pose)

Stretching + gentle flapping movement.

Improves hip flexibility, pelvic circulation, and supports lower back.

### Upavistha Konasana

Wide-leg seated stretch.

Enhances hamstring flexibility and pelvic muscle strength.

### Dynamic Abdominal Practice

### Chakki Chalanasana (Churning Pose)

Circular trunk movement in sitting.

Activates abdominal muscles, improves digestion, reduces abdominal fat.

## Prone & Spinal Strengthening

### Bhujangasana to Parvatasana (Dynamic Transition)

Cobra to Mountain variation movement.

Improves spinal extension–flexion coordination and strengthens back muscles.

### Naukasana (Boat Pose)

Core strengthening posture.

Strengthens abdominal muscles, improves willpower and concentration.

### Setubandhasana

Bridge pose.

Strengthens gluteal muscles, improves circulation, supports spine.

### Leg Raising (90°, 60°, 30°)

Gradual lowering and raising of legs.

Strengthens lower abdomen, improves core stability, enhances blood circulation to lower limbs.

Yogasana Practice List of Section - C

| Breathing Practices                                              |  |                                                             |  |

## 1:00 PM – 2:00 PM: Lunch

A balanced **sattvic lunch** was provided, supporting digestive health and recovery.

## 2:30 PM – 4:00PM - Panchakarma & Naturopathy Department Visit

During this session, we visited the Panchakarma and Naturopathy section to observe various therapeutic procedures used for detoxification and restoration of body balance. The therapies focused on cleansing, improving circulation, and enhancing natural healing mechanisms.

### **Hydrotherapy**

Different forms of water-based treatments were demonstrated, including:

- ✓ Local and full body baths
- ✓ Steam therapy
- ✓ Hot and cold applications

#### **Clinical benefits:**

- Improves blood circulation
- Reduces inflammation
- Relieves muscular stiffness
- Enhances detoxification
- Calms the nervous system

### **Mud Therapy**

Application of therapeutic mud packs to specific body parts.

- ★ Abdominal mud pack for digestive disorders
- ★ Eye mud pack for eye strain
- ★ Full body mud application for skin and metabolic conditions

#### **Benefits:**

- Absorbs toxins
- Reduces body heat
- Improves skin health
- Helps in hypertension and stress

### **Hip Bath (Kati Snana)**

Patient sits in a specially designed tub where water covers the pelvic region.

Types observed:

- ❖ Cold hip bath
- ❖ Neutral hip bath

#### **Clinical significance:**

- ✚ Improves pelvic circulation
- ✚ Beneficial in constipation
- ✚ Helps in urinary disorders
- ✚ Useful in diabetes and reproductive disorders

### **Overall Learning**

The visit provided practical exposure to naturopathic modalities that complement yoga therapy. These therapies work at the **physical and physiological level**, supporting detoxification, improving metabolism, and enhancing the body's innate healing capacity.

The session strengthened our understanding of integrated therapy combining **Yoga + Naturopathy** for holistic health management.

#### **4:00PM to 5:00PM Special Technique – Sports**

The 5:00 PM session consisted of structured sports activities as part of the psychology training module. The focus was not merely physical exercise, but understanding the **psychological benefits of sports participation**.

#### **Psychological Significance:**

- ✓ Improves team coordination and social interaction
- ✓ Enhances attention, concentration, and reaction time
- ✓ Reduces stress, anxiety, and emotional tension
- ✓ Develops leadership qualities and decision-making skills
- ✓ Encourages healthy competition and emotional resilience
- ✓ Builds self-confidence and self-esteem

#### **Activities Included:**

- Group games promoting teamwork
- Coordination and reflex-based activities
- Strategy-based mini games
- Light competitive activities to observe emotional responses

#### **Clinical Relevance in Yoga Therapy:**

- Sports help in balancing **Manomaya Kosa** (mental sheath)
  - Reduces rajas and tamas through healthy expression of energy
  - Supports emotional catharsis and social bonding
  - Complements pranayama and relaxation techniques practiced in morning sessions
- Morning sessions work inward (awareness, koshas, pranayama), and evening sports channel that energy outward in a balanced way. That's actually very holistic psychology training.

#### **5:00 PM – 6:00 PM: Evening Snacks**

Light refreshments were provided.

Evening bhajans were conducted, creating a peaceful and devotional environment.

Trāṭaka and Cyclic Meditation sessions were conducted as per the regular daily schedule. Since the procedures and methodology had already been detailed in the previous days' internship notes, the same practices were repeated accordingly.

A light and sattvic dinner was served.

The day concluded with an **inspirational lecture by Guruji**, focusing on yogic philosophy, discipline, and holistic living.

The day concluded with a sense of physical relaxation, mental clarity, and spiritual upliftment. Exposure to B-Section (Cardiology & Pulmonology) provided valuable insights into the application of yoga therapy for cardiovascular and respiratory disorders through structured practices, breath regulation, relaxation techniques, and lifestyle modification. The systematic schedule and therapeutic approach reinforced the role of yoga as an effective complementary healthcare system in supporting heart and lung health.

**Date:** 12<sup>th</sup> February 2026

### Section: C -Section

**Specialty:** Psychology

**Place:** SVYASA Arogyadhama

### Morning Schedule: Repeated Regular Protocol

The morning sessions were conducted as per the regular daily schedule followed in C Section. The structure remained consistent to ensure therapeutic continuity and psychological stability among participants.

**Date:** 12<sup>th</sup> February 2026

**Section:** Psychology / De-addiction

### Diagnosis: Depression Case Study -1 Participant Details

Name:

- ✓ **Age:** 18 years
- ✓ **Gender:** Male
- ✓ **Occupation:** Student

- ✓ **Marital Status:** Single
- ✓ **Address:** Bengaluru, Karnataka
- ✓ **Religion:** Hindu
- ✓ **Department:** Psychiatry

## 2. Chief Complaints (with duration)

- Anxiety for past 4 years
- Suicidal thoughts during exam periods
- Performance stress for 3 years
- Headache since 5 years
- Dry mouth during stress episodes

## 3. History of Present Illness

The participant reported exam fear beginning in 7th standard. Over time, anxiety increased during board exams and higher secondary education.

- Panic episodes during exam preparation
- Avoidance of studies due to anxiety
- Suicidal ideation associated with academic pressure
- Recurrent stress pattern during I PU / I semester
- No major physical illness reported

He sought admission for non-pharmacological management and lifestyle correction.

## 4. Past History

- ★ No significant past psychiatric hospitalization mentioned
- ★ No substance abuse history
- ★ No major medical illness

## 5. Personal History

- ❖ Sleep disturbed initially
- ❖ Appetite altered during stress
- ❖ Student life stressors
- ❖ Emotional vulnerability during performance evaluation

## Physiological Parameters

| Parameter        | On Admission | At Discharge |
|------------------|--------------|--------------|
| Pulse            | 84 bpm       | 74 bpm       |
| Blood Pressure   | 132/94 mmHg  | 126/80 mmHg  |
| Respiratory Rate | 16 cpm       | 12 cpm       |
| Bhramari Time    | 8 sec        | 12 sec       |
| Weight           | 91.9 kg      | 92 kg        |
| Height           | 178 cm       | 178 cm       |

| Parameter | On Admission           | At Discharge           |
|-----------|------------------------|------------------------|
| BMI       | 29.0 kg/m <sup>2</sup> | 29.0 kg/m <sup>2</sup> |

### Psychological Parameters

| Parameter        | On Admission | At Discharge |
|------------------|--------------|--------------|
| Symptom Score    | 5            | 4            |
| Medication Score | 0            | 0            |

### Symptom Checklist Findings

Positive for:

- ✓ Fear without reason
- ✓ Sleeplessness
- ✓ Excessive thinking
- ✓ Depressed mood
- ✓ Suicidal ideation
- ✓ Anxiety symptoms

**Diagnosis:** Depression

### Yoga Therapy Intervention (IAYT)

#### Asana Practices

-  Loosening practices
-  Standing postures
-  Sitting postures
-  Supine relaxation

#### Pranayama

- ✓ Abdominal breathing
- ✓ Nadi Shuddhi
- ✓ Bhramari
- ✓ Sheetal / Seetkari
- ✓ Deep Relaxation Technique

#### Meditation & Mind Practices

- MSRT (Mind Sound Resonance Technique)
- OM meditation
- Cyclic Meditation
- Karma Yoga
- Raja Yoga principles

#### Counselling

- ✓ Stress management
- ✓ Academic coping strategies

- ✓ Lifestyle modification

### **Naturopathy Treatment**

- ✓ APEP
- ✓ Full Body Massage
- ✓ Warm underwater massage
- ✓ Hot oil application
- ✓ Steam bath (as per schedule)

### **Diet Therapy**

- ✓ Early morning lemon / cucumber juice
- ✓ Sprouts and vegetable salads
- ✓ Brown rice / chapati
- ✓ Fresh vegetable juices
- ✓ Buttermilk
- ✓ Avoid junk, fried, processed foods
- ✓ High fiber natural diet

### **Progress During Stay**

- Sleep improved
- Bowel normalized
- Anxiety reduced
- No fresh complaints at discharge
- Improved breathing capacity (Bhramari time increased)
- BP reduced
- Pulse stabilized

### **Discharge Summary**

An 18-year-old male admitted with depression and anxiety related to academic stress showed moderate improvement following integrated yoga therapy, naturopathy, diet regulation, and counselling.

Psychological symptoms reduced, physiological parameters improved, and sleep pattern normalized. He was advised to continue yoga practices regularly and attend follow-up after 3 months.

### **10:00 AM – 1:00 PM**

The next session involved a clinical visit to the **Acupressure and Acupuncture Laboratory and Hospital Unit**. The purpose of this visit was to understand the theoretical basis and practical application of meridian therapy in naturopathy.

### **Introduction to Acupuncture & Acupressure**

Acupuncture and acupressure are therapeutic modalities based on:

- ✓ Regulation of vital energy (Qi)
- ✓ Stimulation of meridian pathways
- ✓ Balancing Yin–Yang principles

- ✓ Restoring organ harmony

Unlike yoga which works through koshas and pranic flow, acupuncture works through **energy channels (meridians)** mapped across the body.

### **Observations in the Lab**

#### **Meridian & Organ Models**

We observed detailed anatomical models representing:

- Lung
- Liver
- Stomach
- Spleen
- Kidney
- Pericardium
- Triple Warmer
- Governing Vessel
- Concept Vessel
- Gall Bladder

Each model displayed:

- Meridian pathways
- Elemental points
- Organ-energy mapping
- Acupoints location

These visual aids help students understand the correlation between internal organs and surface points.

#### **Acupuncture Points Demonstration**

Faculty explained:

-  Location of specific acupoints
-  Indications for each point
-  Depth and angle of needle insertion
-  Contraindications
-  Emergency acupuncture points

Special focus was given to:

- ★ Points for anxiety
- ★ Points for headache
- ★ Points for stress management
- ★ Points for digestive disorders

#### **Acupressure Tools Observation**

Various tools were displayed such as:

- ❖ Wooden rollers
- ❖ Spiked therapy balls
- ❖ Hand reflex rollers
- ❖ Acupressure massagers

- ❖ Foot stimulators
- ❖ Pressure rings

These tools are used for:

- Self-therapy
- Reflexology stimulation
- Pain relief
- Improving circulation
- Relaxation therapy

### **Hospital Unit Observation**

In the clinical area:

- ✓ Patient assessment process was explained
- ✓ Pulse diagnosis method demonstrated
- ✓ Meridian imbalance identification discussed
- ✓ Case-based treatment planning observed
- ✓ Sterilization protocol for needles shown

We observed how acupressure/acupuncture is used for:

- ✓ Anxiety disorders
- ✓ Migraine
- ✓ Cervical spondylosis
- ✓ Sciatica
- ✓ Digestive disorders
- ✓ Insomnia

### **Clinical Relevance to Yoga Therapy**

From yoga therapy perspective:

| <b>Acupuncture</b>           | <b>Yoga Therapy</b>             |
|------------------------------|---------------------------------|
| Works on meridians           | Works on nadis                  |
| Balances organ energy        | Balances prana                  |
| Stimulates specific points   | Uses asana & pranayama          |
| Immediate symptomatic relief | Holistic kosha-level correction |

Both systems aim to:

- Improve pranic circulation
- Reduce stress
- Enhance nervous system regulation
- Restore homeostasis

### **Learning Outcomes**

- Understood meridian theory

- Learned basic acupoint identification
- Observed sterile technique and clinical practice
- Recognized integration potential with yoga therapy
- Gained practical exposure to alternative healing modalities

#### **1:00 PM – 2:00 PM: Lunch**

A balanced **sattvic lunch** was provided, supporting digestive health and recovery.

#### **2:30 PM – 4:00PM – MSRT & Pranayama**

The routine practices were repeated as per the regular schedule.

#### **4:00PM to 5:00PM Special Technique – Sports**

The 5:00 PM session consisted of structured sports activities as part of the psychology training module. The focus was not merely physical exercise, but understanding the **psychological benefits of sports participation**.

#### **5:00 PM – 6:00 PM: Evening Snacks**

Light refreshments were provided.

#### **6:00 PM – 6:30 PM: Bhajans**

Evening bhajans were conducted, creating a peaceful and devotional environment.

#### **6:40 PM – 7:40 PM: Trāṭaka and Cyclic Meditation**

Trāṭaka and Cyclic Meditation sessions were conducted as per the regular daily schedule. Since the procedures and methodology had already been detailed in the previous days' internship notes, the same practices were repeated accordingly.

#### **Conclusion of the Day**

The day concluded with a sense of physical relaxation, mental clarity, and spiritual upliftment. Exposure to B-Section (Cardiology & Pulmonology) provided valuable insights into the application of yoga therapy for cardiovascular and respiratory disorders through structured practices, breath regulation, relaxation techniques, and lifestyle modification. The systematic schedule and therapeutic approach reinforced the role of yoga as an effective complementary healthcare system in supporting heart and lung health.

~~~~~

Day 11 – D Section

Date: 13th February 2026

Section: D -Section

Specialty: Rheumatoid

Place: SVYASA Arogyadhama

5:20AM to 05:50AM Schedule

The morning sessions were conducted according to the structured therapeutic protocol designed specifically for all the participants and internals.

06:00AM to 06:55AM Special Technique

(Joint Mobility & Pain Management Protocol)

Objective:

- Reduce joint stiffness
- Improve circulation
- Maintain range of motion
- Decrease pain and inflammation
- Promote relaxation and breath awareness

1. Focus on Joints (Initial Awareness – 3–5 mins)

Participants were guided to:

- Bring awareness to affected joints
- Observe stiffness, swelling, or pain
- Coordinate movement with slow breathing

This prepares the neuromuscular system and prevents strain.

2. Toe & Ankle Stretching

- Toe bending (forward & backward)
- Ankle rotation (clockwise & anticlockwise)

Benefits:

Improves circulation in lower limbs, reduces morning stiffness (common in RA), prevents ankle rigidity.

3. Knee Practices

- Knee bending and extension
- Knee rotation
- Knee cap massage (front & back region)
- Holding thigh and rotating knee
- Knee straight hold for 10 seconds
- Folding right knee and bending to right side

Benefits:

- Lubricates knee joint
- Strengthens surrounding muscles
- Reduces synovial stiffness
- Prevents deformity progression

Movements were done gently without forcing.

4. Hand & Wrist Stretching

- Hand stretching (front & side)
- Wrist rotation (both sides)

Benefits:

Very important in RA as fingers and wrists are commonly affected.

Improves grip strength and reduces morning stiffness.

5. Hip Rotation

- Gentle circular rotation of hip joint

Improves pelvic mobility and reduces lower limb stiffness.

6. Neck Rotation

- Slow clockwise and anticlockwise movements

Relieves cervical stiffness and improves blood supply to upper body.

7. Tadasana Side Bending (Thiriyaka Tadasana)

- Gentle lateral bending with breath awareness

Improves spinal flexibility and reduces trunk stiffness.

8. Makarasana with Lumbar Stretch

- Relaxed prone position
- Gentle lumbar extension stretch

Relieves lower back stiffness and reduces muscle guarding.

9. Leg Rotation (Supine)

- Single leg rotation in lying posture

Improves hip and knee joint mobility safely.

10. Butterfly Asana (Lying Variation)

- Gentle hip opening movement

Reduces groin stiffness and improves circulation to pelvic region.

11. Anantasana Style Leg Rotation + Hand Rotation

- Side-lying leg rotation
- Coordinated hand rotation

Enhances neuromuscular coordination.

12. Setu Bandhasana (Gentle)

- Mild bridge pose

Strengthens back and improves spinal alignment.

13. Pavanamuktasana (Single Leg)

- Knee to chest (one leg at a time)

Relieves stiffness in hip and lower back.

14. DRT (Deep Relaxation Technique)

- Systematic relaxation
- Awareness of breath
- Observing joints
- “Relax the pain” suggestion

Therapeutic Goal:

Shift attention from pain to awareness, reduce stress-induced inflammation, calm sympathetic overactivity.

9:00 AM – 9:50 AM: Parameters and Consultation

Participant Profile

- **Name:** Ms. Tejinder Kaur Walia

- **Age/Gender:** 71 Years / Female
- **Occupation:** Retired
- **Duration of Stay:** 15 Days
- **Section:** D Section
- **Date of Admission:** 08/01/2026
- **Date of Discharge:** 19/01/2026

2. Chief Complaints

- Bilateral knee pain (since 20 years)
- Bilateral thigh muscle pain (since 1 year)
- Hypertension (since 20 years)
- Hypothyroidism (since 4 years)
- Pre-diabetes (since 7 years)
- Hiatus hernia
- Vitiligo

3. Diagnosis

- Osteoarthritis
- Hypertension
- Hypothyroidism
- Hiatus Hernia
- Pre-diabetic condition

4. History of Present Illness

A 71-year-old female presented with chronic bilateral knee pain aggravated by walking and prolonged standing. She has been overweight for the past 20 years and hypertensive for two decades. Pain severity increased post-menopause. She approached Arogyadhama for integrated management.

5. Baseline Parameters

Parameter	On Admission	On Discharge
Pulse Rate	80 bpm	78 bpm
Blood Pressure	170/88 mmHg	126/74 mmHg
Respiratory Rate	16 cpm	16 cpm
Bhramari Time	7 sec	12 sec
Weight	80.9 kg	78.4 kg
BMI	35.5	34.38
Symptom Score	3	1
Medication Score	3	2

6. Integrated Approach of Yoga Therapy (IAYT)

A. Annamaya Kosha (Physical Level)

- Special techniques for arthritis (joint loosening practices)
- Tadasana, Trikonasana (modified)
- Pawanmuktasana (single leg)
- Setubandhasana (mild variation)
- Makarasana with lumbar stretch
- DRT (Deep Relaxation Technique)

Purpose: Reduce stiffness, improve joint mobility, decrease pain perception.

B. Pranamaya Kosha (Energy Level)

- Abdominal breathing
- Nadi Shuddhi
- Bhramari Pranayama
- Sheetal / Sheetskari
- MSRT (Mind Sound Resonance Technique)

Outcome: Improved breath holding time and parasympathetic activation.

C. Manomaya Kosha (Mental Level)

- OM Meditation
- Cyclic Meditation
- Bhajan sessions
- Yoga counselling

Purpose: Reduce stress-induced inflammatory response.

D. Vijnanamaya & Anandamaya Kosha

- Lifestyle correction
- Self-awareness practices
- Satsang participation

7. Naturopathy Treatments

Treatment	Purpose
AEP (Abdomen & Eye Pack)	Improve digestion, reduce stress
HSF (Hot Sand Fomentation)	Reduce joint stiffness
GH Pack (Gastro-Hepatic Pack)	Metabolic regulation
Neutral Underwater Massage	Improve circulation
Steam Bath (Lower limbs)	Reduce inflammation

8. Ayurveda Treatments

- Pichu to lower back
- Janu Basti (both knees)
- Sarvanga Abhyanga
- Nadisweda

Purpose: Lubrication of joints, reduction of Vata aggravation.

9. Acupuncture

Points used: SP6, ST36, LI4, GB31, GB34 etc.

Focus on pain modulation and systemic regulation.

10. Diet Therapy (Naturopathic Diet)

Morning

- Methi water
- Wheat grass juice
- Lemon honey water

Breakfast

- Sprouts
- Vegetable juice
- Wheat vermicelli / Oats

Lunch

- Brown rice / Chapati
- Boiled vegetables
- Salad

Evening

- Vegetable soup

Dinner

- Light vegetable diet

Diet Avoided: Refined flour, processed food, sugar, fried items.

11. Progress During Stay

- BP significantly reduced
- Weight reduction observed
- Pain severity reduced by approximately 50%
- Improved sleep quality
- Reduced morning stiffness duration
- Improved appetite
- Improved breathing capacity

12. Discharge Summary

At the time of discharge, the participant reported:

- Significant reduction in knee pain
- Improved mobility
- Better sleep and appetite
- Reduced stress levels
- BP under control
- Weight reduction achieved

Advice on Discharge:

- Continue home yoga practices
- Follow naturopathic diet
- Continue Ayurveda therapy if required
- Follow-up after 3 months

10:00AM to 11:00PM Lecture

Date: 13th February 2026

Department: Naturopathy / Diet & Lifestyle Management

Resource Person: Dr. Dhruti (BNYS)

Topic: Therapeutic Diet & Fasting

Objective of the Session

To understand the principles of balanced diet, therapeutic fasting, detoxification, calorie balance, nutrient absorption, and the role of gut health in disease management.

Summary of the Lecture

1. Balanced Diet

A balanced diet includes appropriate proportions of:

- **Cereals** – rice, wheat, millets (ragi, jowar)
- **Pulses/Legumes** – green gram, bengal gram, rajma
- **Proteins** – sprouts, paneer, lentils
- **Healthy fats** – small quantity of groundnut oil, sesame oil
- **Vegetables & fruits** – spinach, carrot, beans, guava, papaya
- **Adequate water**

According to **ICMR guidelines**, diet should meet recommended daily allowances (RDA) based on age and activity level.

Example:

If a person consumes 2000 kcal per day, the same amount of calories should be burned through physical activity. Excess calorie intake may lead to obesity, hypertension, and joint stress (important in arthritis patients).

2. Therapeutic Fasting

Therapeutic fasting is used for:

- Detoxification
- Giving rest to the digestive system
- Improving metabolic efficiency

Preparation is important.

If fasting is planned the next day:

- Avoid heavy meals the previous night.
- Take light food such as vegetable soup or fruits.

Example:

Instead of rice and fried items before fasting, one can take vegetable soup and fruit salad.

3. Juice Fasting

Common detox drink:

- **Lemon + honey in warm water**

Benefits:

- Maintains mild glucose supply
- Prevents acidity
- Supports toxin elimination

Adequate hydration (2–3 liters of water) is necessary during fasting.

4. Vegetables & Cooking Methods

All vegetables are fiber-rich and help in:

- Improving bowel movement
- Reducing cholesterol
- Supporting gut health

Overcooking destroys nutrients.

Example:

- Steamed broccoli retains more nutrients than deep-fried broccoli.
- Lightly steamed spinach is better than overboiled spinach.

5. Nutrient Absorption

Nutrient absorption depends on food combinations.

Example:

- Spinach (Palak) contains iron.
- Adding lemon juice (Vitamin C) improves iron absorption.
- Palak paneer without lemon reduces iron bioavailability.

Another example:

- Turmeric absorption improves when combined with black pepper.

6. Fermentation & Gut Health

Fermented foods promote growth of good bacteria (probiotics).

Examples:

- Curd
- Buttermilk
- Idli/dosa batter
- Homemade pickles (naturally fermented)

Benefits:

- Improve digestion
- Enhance immunity
- Reduce inflammation

Clinical Relevance

Balanced diet and therapeutic fasting help in:

- Reducing body weight
- Managing hypertension
- Controlling blood sugar
- Reducing inflammation in arthritis
- Improving digestion and metabolic health

Learning Outcome

- Understood calorie balance concept
- Learned preparation methods for therapeutic fasting
- Gained knowledge about detoxification
- Understood nutrient absorption principles
- Recognized importance of gut microbiome in disease prevention

11:00AM to 12:00PM Library

12:00PM to 1:00PM Special Technique

Therapeutic Asana & Mobility Practice

Objective:

- Improve joint flexibility
- Reduce stiffness and pain
- Enhance muscular strength
- Improve spinal mobility
- Promote relaxation

Practices Performed

1. Hand Stretching Exercises

- Gentle forward and backward stretching of fingers and palms.
Benefit: Reduces stiffness in finger joints (important in arthritis cases).

2. Fingers & Wrist Exercises

- Wrist rotation (clockwise & anticlockwise)
- Finger opening and closing

Benefit: Improves circulation and grip strength.

3. Shoulder Rotation

- Circular shoulder movements

Benefit: Relieves shoulder stiffness and improves upper body mobility.

4. Neck Exercises

- Slow forward, backward, and side movements
- Gentle rotations

Benefit: Reduces cervical stiffness and improves blood supply.

5. Marjariasana (Cat Stretch – with chair support)

- Spinal flexion and extension

Benefit: Improves spinal flexibility and relieves back pain.

6. Forward & Backward Bending

- Gentle trunk bending

Benefit: Strengthens back muscles and improves posture.

7. Twisting (Shoulder & Hip)

- Gentle spinal twisting

Benefit: Improves spinal rotation and digestive function.

8. Side Bending

- Lateral trunk stretch

Benefit: Enhances flexibility of intercostal muscles.

9. Leg Raising (90° Alternate)

- Single leg raise up to 90°

Benefit: Strengthens abdominal and thigh muscles.

10. Knee Bending & Rotation (Alternate Legs)

- Knee flexion-extension
- Gentle knee rotation

Benefit: Maintains knee joint mobility and reduces stiffness.

11. Hip & Knee Rotation (Lying Position)

- Supine hip rotation

Benefit: Lubricates hip joint and improves range of motion.

12. Pavanamuktasana

- Single leg and both legs variation

Benefit: Relieves lower back stiffness and improves digestion.

13. Cycling (Supine)

- Simulated cycling movement

Benefit: Improves circulation in lower limbs.

14. Setubandhasana (Bridge Pose)

- Gentle back arch

Benefit: Strengthens lower back and improves spinal alignment.

15. Lumbar Stretching

- Mild lumbar extension

Benefit: Reduces lower back tension.

16. DRT (Deep Relaxation Technique)

- Systematic relaxation with breath awareness

Benefit: Reduces pain perception and calms the nervous system.

Clinical Relevance

This session focused on:

- Joint lubrication
- Muscle strengthening
- Spinal flexibility
- Reducing inflammatory stiffness
- Enhancing parasympathetic response

Particularly beneficial in:

- Osteoarthritis
- Rheumatoid arthritis
- Chronic back pain
- Hypertension (through relaxation component)

After lunch and rest period, we visited the Physiotherapy Department as part of our clinical exposure.

3:00PM to 5:00PM Physiotherapy visit

Visited the Physiotherapy Department to observe various rehabilitation tools and therapeutic equipment used for musculoskeletal management.

During the visit, we observed:

- **Grip strengthening tools** for improving hand and finger strength (useful in arthritis patients).
- **Hand exercise board with wooden pegs and grips** for enhancing fine motor coordination.
- **Shoulder wheel apparatus** to improve shoulder joint range of motion.
- **Ankle exerciser/pedal unit** for strengthening lower limb muscles.
- **Foot vibration and reflex stimulation device** for improving circulation.
- **Balance board** for postural stability and proprioception training.
- **Footprint assessment (gait analysis)** to study weight distribution and walking pattern.

The session provided practical exposure to physiotherapy rehabilitation techniques and helped us understand how physiotherapy complements yoga therapy in improving joint mobility, muscle strength, balance, and functional independence.

The subsequent sessions were conducted as per the previously scheduled routine. The therapeutic practices, including yoga therapy sessions, special techniques, pranayama, relaxation techniques, and supportive therapies, were repeated consistently to maintain continuity of treatment and ensure progressive improvement in the participant's condition.

The repetition of the schedule helped in reinforcing joint mobility, improving muscle strength, enhancing breath control, and stabilizing physiological and psychological parameters. No major changes were made to the protocol during these sessions, as the participant was responding positively to the ongoing integrated therapy plan.

~~~~~

## **Day 12 – D Section**

**Date:** 14<sup>th</sup> February 2026

**Section:** D -Section

**Specialty:** Rheumatoid

**Place:** SVYASA Arogyadhama

### **5:20AM to 05:50AM Schedule**

The morning sessions were conducted according to the structured therapeutic protocol designed specifically for all the participants and internals.

### **06:00AM to 07:00 Kriya Schedule**

**Location:** Designated Kriya Practice Area

Early morning sessions were conducted for cleansing practices (Kriyas) in the assigned area under supervision. The practices included:

- **Vamana Dhauti** – therapeutic cleansing of the stomach.
- **Jala Neti** – nasal cleansing using saline water.
- **LSP (Laghu Shankha Prakshalana)** – mild intestinal cleansing practice.

These kriyas were performed as per individual requirement and medical advice. The purpose of the session was detoxification, improving digestive function, clearing respiratory passages, and preparing the body for further yoga practices.

The session emphasized hygiene, safety precautions, and proper guidance throughout the practice.

### **Next.....**

The subsequent yoga asana sessions were conducted as per the same prescribed therapeutic schedule and routine

### **09:00AM to 10:00AM Paramters**

#### **Case Study**

##### **Participant Profile**

- **Name:** \*\*\*\*\*
- **Age/Gender:** 62 years / Female
- **Occupation:** Retired Teacher
- **Duration of Stay:** 1 Week
- **Date of Admission:** 27/01/2026
- **Date of Discharge:** 02/02/2026
- **Department:** Rheumatology

#### **2. Chief Complaints**

- Pain in right shoulder since 1 month
- Pain in right side joints aggravated during cold weather since 7 months
- Difficulty in standing and walking after lying down
- Known case of Rheumatoid Arthritis since 12 years

#### **3. History of Present Illness**

A 62-year-old female presented with increased pain in the right shoulder for the past one month. She also complained of pain in other joints, particularly aggravated in cold weather and during daytime activity. She experiences stiffness after rest and difficulty while getting up from sitting or lying position.

She has been under medication for Rheumatoid Arthritis since 2016. Pain episodes occur intermittently and affect shoulder, fingers, hip, and ankle joints.

#### 4. Personal & Past History

- Appetite: Normal
- Sleep: Sound
- Bowel & Bladder: Normal
- Past Surgery: Bilateral knee replacement (2016)
- Family History: Brother – Hypertension

#### 5. Diagnosis

- Rheumatoid Arthritis (Chronic – 12 years)

#### 6. Baseline Parameters

| Parameter        | On Admission | On Discharge |
|------------------|--------------|--------------|
| Pulse            | 75 bpm       | 70 bpm       |
| Blood Pressure   | 108/58 mmHg  | 96/54 mmHg   |
| Respiratory Rate | 14 cpm       | 13 cpm       |
| Bhramari Time    | 14 sec       | 14 sec       |
| Weight           | 47.5 kg      | 46.8 kg      |
| BMI              | 20.7         | 20.4         |
| Symptom Score    | 4            | 2            |
| Medication Score | 4            | 4            |

#### 7. Integrated Approach of Yoga Therapy (IAYT)

##### A. Annamaya Kosha (Physical Level)

- Special techniques for arthritis
- Joint loosening practices
- Gentle stretching
- Modified asanas
- DRT (Deep Relaxation Technique)

**Purpose:** Improve joint mobility, reduce stiffness and pain.

##### B. Pranamaya Kosha (Energy Level)

- Abdominal breathing
- Nadi Shuddhi
- Bhramari
- Pranayama practices

**Outcome:** Improved parasympathetic activation and relaxation.

##### C. Manomaya Kosha (Mental Level)

- OM Meditation
- Cyclic Meditation
- Mind Sound Resonance Technique (MSRT)
- Bhajan sessions

**Purpose:** Reduce stress-induced inflammation.

##### D. Vijnanamaya & Anandamaya Kosha

- Yogic counseling
- Lifestyle awareness
- Satsang participation

## **8. Naturopathy Treatment**

- Naturopathic diet
- Ozone therapy
- Right arm & knee bagging
- Cupping massage to back (alternate days)

Purpose: Reduce inflammation, improve circulation, detoxification.

## **9. Ayurveda Treatment**

- Pichu to right shoulder & right knee
- Mrudu Abhyanga
- PPS massage
- Sarvanga Abhyanga + Steam

Purpose: Reduce Vata aggravation and improve joint lubrication.

## **10. Diet Therapy**

### **Morning:**

- Methi water
- Lemon honey water
- Ash gourd juice / Wheat grass juice

### **Breakfast:**

- Sprouts
- Oats / Wheat upma

### **Lunch:**

- Brown rice / Chapati
- Boiled vegetables
- Vegetable soup

### **Dinner:**

- Vegetable salad / Khichdi

### **Do's:**

- Fresh fruits & vegetables
- Whole grains
- Healthy fats (flaxseeds, sesame)
- Probiotic foods

### **Don'ts:**

- Refined grains
- Fried foods
- Processed food
- Excess sugar

## **11. Progress During Stay**

- Reduction in shoulder pain
- Reduced joint stiffness
- Improved mobility
- Improved sleep
- Symptom score reduced from 4 to 2
- Weight slightly reduced
- Patient reported feeling better

## **12. Condition at Discharge**

- Joint pain significantly reduced

- Patient feeling better
- Improved functional ability
- Advised to continue yoga, diet, and lifestyle modifications
- Follow-up after 3 months

#### **10:00AM to 11:00AM Lecture**

**Lecture by: Karibasappa Sir**

**Date:** 14/02/2026

**Topic:** Yogic Philosophy, Moderation in Life, AUM & Mantra, and Contribution of Yoga to Society

#### **1. Yoga as Balanced Living**

Sir began the lecture by emphasizing that Yoga is not merely physical exercise, but a complete way of life based on moderation and discipline.

He quoted **Bhagavad Gita – Chapter 6, Verse 17:**

*युक्ताहारविहारस्य युक्तचेष्टस्य कर्मसु ।  
युक्तस्वप्नावबोधस्य योगो भवति दुःखहा ॥ 6.17 ॥*

#### **Meaning:**

For one who is moderate in:

- Food (Āhāra)
- Recreation (Vihāra)
- Actions (Karma)
- Sleep and wakefulness

Yoga becomes the destroyer of sorrow.

#### **Explanation:**

Sir explained that imbalance in:

- Eating
- Sleeping
- Working
- Resting

leads to disease and suffering. Yoga requires regulation. Without moderation, even spiritual practice cannot progress.

This concept is especially important in yoga therapy for lifestyle disorders such as arthritis, hypertension, obesity, and stress-related conditions.

#### **2. “Om Namo Bhagavate Vasudevaya”**

Sir explained the significance of the mantra:

*ॐ नमो भगवते वासुदेवाय*

#### **Word Meaning:**

- **Om** – The universal sound
- **Namo** – I bow / I surrender
- **Bhagavate** – To the divine
- **Vasudevaya** – To Lord Vasudeva (Supreme consciousness)

#### **Philosophical Meaning:**

The mantra represents surrender of ego and devotion to higher consciousness. Sir emphasized that true yoga requires humility and surrender.

Chanting this mantra:

- Calms the mind

- Reduces ego
- Develops devotion (Bhakti)
- Improves concentration

Yoga without inner surrender becomes mechanical.

### **3. AUM and OM – Detailed Explanation**

Sir clarified the difference between **AUM** and **OM**.

#### **AUM – Complete Form**

AUM consists of three syllables:

- **A** – Creation
- **U** – Sustenance
- **M** – Dissolution

The silence after AUM represents pure consciousness (Turiya).

AUM symbolizes:

- Waking state
- Dream state
- Deep sleep
- Transcendental state

It represents total existence.

#### **OM – Common Pronunciation**

OM is the simplified sound used in chanting.

AUM is the complete vibrational understanding.

Sir explained that chanting AUM creates vibration from:

- Abdomen
- Chest
- Throat
- Head

This balances the nervous system and stabilizes the mind.

### **4. Contribution of Yoga to Society**

Sir highlighted the historical development of yoga research:

- 1980–81 – Registration of research initiatives
- 1983–84 – “Yoga for Asthma” scientific journal publication
- 2002 – Recognition as Deemed University

He emphasized the role of life workers and researchers in:

- Establishing yoga scientifically
- Publishing research papers
- Integrating yoga into healthcare and education

Yoga evolved from a traditional spiritual practice into a scientifically validated discipline.

### **5. Yoga and Personality Development**

Sir emphasized that yoga transforms:

- Behaviour
- Attitude
- Discipline
- Character

Yoga must reflect in:

- Food habits
- Speech
- Thought

- Actions

Otherwise, practice remains incomplete.

## **6. Core Message of the Lecture**

The main teachings conveyed were:

- Yoga is balanced living.
- Moderation in food, sleep, and activity is essential.
- AUM represents total cosmic existence.
- Mantra chanting develops surrender and devotion.
- Yoga research has established global recognition.
- True yoga transforms personality and reduces suffering.

## **12:00PM to 1:00PM Special Techniques**

### **Special Technique Session – Spinal Disorders**

#### **Objective:**

To reduce spinal stiffness, improve flexibility, enhance muscle strength, and relieve back pain through chair-supported and supine therapeutic practices.

#### **Initial Preparation (Seated in Chair)**

- Sit comfortably in chair with erect spine.
- Chant **Omkar** 3 times.
- Chant **Shanti Mantra**.

#### **Purpose:**

- Calm the mind
- Prepare body and breath
- Create mental focus

### **Upper Limb Loosening Practices**

#### ◆ **Hand Stretching (3 Variations)**

- Forward stretch
- Side stretch
- Upward stretch

Improves circulation and shoulder mobility.

#### **Finger Loosening**

- Palm up and palm down movements
- Open and close fingers
- Gentle rotations

Reduces stiffness in small joints.

#### **“U” Kara Chanting**

Chanting “U” sound while stretching enhances vibratory relaxation in chest and throat region.

#### **Elbow Loosening**

- Vertical bending
- Horizontal stretch

Improves elbow flexibility and reduces stiffness.

#### **Shoulder Rotation**

- Clockwise and anticlockwise rotations

Relieves upper back and shoulder tension.

#### **Neck Loosening**

- Up and down movement

- Side bending
- Twisting
- Rotation

Reduces cervical stiffness.

### **Upper Arm Stretch (Vertical & Horizontal)**

Enhances flexibility of upper limb muscles and improves posture.

### **Om Chanting (Short Relaxation)**

Helps restore breathing rhythm.

### **Chair-Supported Spinal Movements**

#### **Forward & Backward Bending (Seated)**

Improves spinal flexion and extension.

#### **Twisting (Chair Support)**

Enhances spinal rotation and relieves stiffness.

#### **Side Bending (Chair Support)**

Improves lateral flexibility of spine.

#### **Supine Practices (Lying Down on Mat)**

After chair practices, participant lies down on mat.

#### **Leg Raising (Alternate Legs)**

Strengthens abdominal and lower back muscles.

#### **Knee Bending & Rotation**

Improves knee mobility and reduces joint stiffness.

#### **Hip Rotation**

Half leg raise, bend and rotate.

Improves hip joint lubrication.

#### **Pavanamuktasana**

Relieves lower back tension and improves digestion.

#### **Single Leg Cycling (Front & Back)**

Strengthens thigh muscles and improves circulation.

#### **Both Leg Cycling**

Enhances coordination and lower limb strength.

#### **Setubandhasana (Bridge Pose)**

- Raise hips
- Hold
- Slowly release

Strengthens lumbar region and gluteal muscles.

#### **Crossed Leg Lumbar Stretch**

Provides deep stretch to lower back muscles.

### **Therapeutic Benefits for Spinal Disorders**

- Improves spinal flexibility
- Reduces stiffness
- Enhances muscle strength
- Improves posture
- Reduces back pain
- Enhances neuromuscular coordination

## **Conclusion**

This special technique session combines:

- Chair-supported safe movements
- Supine strengthening practices
- Chanting for relaxation

It is especially beneficial for:

- Lumbar spondylosis
- Cervical spondylosis
- Chronic back pain
- Degenerative spinal conditions

## **Next Sessions .....Lunch and Rest**

### **Special Technique Session – Knee Pain Reduction**

**Time:** 4:00 PM

**After:** Lunch & MSRT (Mind Sound Resonance Technique)

**Objective:** To reduce knee pain, improve joint stability, and strengthen thigh and calf muscles.

#### **Standing Position – Wall Support**

- Stand facing the wall.
- Place feet against the wall (toes upward position).
- Hold window/grill with both hands for support.
- Maintain ankle alignment and stretch.

**Repetition:** 3–5 times

#### **Benefit:**

- Lengthens calf muscles
- Improves ankle flexibility
- Reduces strain on knee joint

#### **Supported Chair Squat (Holding Window)**

- Stand holding window with both hands.
- Slowly sit back into chair position (semi-squat).

#### **Benefit:**

- Strengthens thigh muscles (Quadriceps & Hamstrings)
- Improves knee joint stability

#### **Backward Standing Near Wall**

- Stand with back towards support.
- Hold support and gently move into sitting position.

#### **Benefit:**

- Strengthens hamstrings
- Improves lower limb control

#### **Seated Leg Extension (Using Chair Support)**

- Sit in chair.
- Place both legs on another chair.
- Press knee downward.
- Extend feet forward.

**Benefit:**

- Strengthens quadriceps
- Reduces knee stiffness
- Improves range of motion

### Setubandhasana (Bridge Pose)

- Raise hips upward.
- Hold and release slowly.

**Benefit:**

- Strengthens calf muscles
- Improves circulation
- Supports knee and lower back

### Modified Setubandhasana (With Support Under Spine/Buttocks)

- Place folded mat under lower back or buttocks.
- Hold posture.

**Benefit:**

- Relieves back pain
- Provides support
- Reduces pressure on knees

### Therapeutic Importance

This session focused on:

- Strengthening thigh and calf muscles
- Improving joint stability
- Reducing knee pain
- Enhancing mobility
- Preventing further degeneration

These techniques are especially beneficial in:

- Osteoarthritis knee
- Rheumatoid arthritis
- Post knee replacement cases
- Chronic knee pain

The subsequent sessions were conducted as usual according to the daily schedule. The routine therapeutic practices, including kriyas, asanas, pranayama, special techniques, relaxation practices, and supportive therapies, were continued without major modifications. The repetition of the structured schedule ensured continuity of treatment, gradual strengthening of muscles, improved joint mobility, and stabilization of physical and psychological parameters. The participant continued to respond positively to the ongoing integrated therapeutic program.

[illegible]

## Day 13 – E Section

**Date:** 15<sup>th</sup> February 2026

**Section:** E -Section

**Specialty:** SPINAL

**Place:** SVYASA Arogyadhama

### **5:20AM to 05:50AM Schedule**

**Practice:** Om Dhyana & Mahamrityunjaya Mantra Pathana

The early morning session was dedicated to meditation and mantra chanting. The session began with **Om Dhyana**, where participants chanted Om slowly with awareness of breath and vibration. The chanting was followed by silent meditation to internalize the sound resonance and calm the mind.

After Om Dhyana, participants recited the **Mahamrityunjaya Mantra**:

ॐ त्र्यम्बकं यजामहे सुगन्धिं पुष्टिवर्धनम्।

उर्वारुकमिव बन्धनान्मृत्योर्मुक्षीय मामृतात्॥

### **Meaning:**

“We worship the three-eyed Lord (Shiva), who nourishes and sustains all beings. May He liberate us from bondage and suffering, like a ripe cucumber detaches from the vine, and grant us immortality (spiritual freedom).”

### **Benefits:**

- Promotes mental peace and emotional stability
- Reduces anxiety and fear
- Enhances concentration
- Strengthens spiritual awareness
- Creates positive vibrations

This session prepared the participants mentally and emotionally for the day's therapeutic practices by promoting inner calmness and spiritual focus

### **06:00AM to 07:00AM Special Technique**

#### **Special Technique Session**

**Objective:** To improve joint mobility, strengthen core and lower limb muscles, enhance spinal flexibility, and reduce stiffness.

### **Practices Performed**

#### **Hand Stretching**

- Stretch to chest level
- Stretch to forehead level
- Upward stretch

**Benefit:** Improves shoulder mobility and upper limb flexibility.

#### **Neck Exercises**

- Forward & backward movement
- Side bending
- Gentle rotation

**Benefit:** Reduces cervical stiffness and improves blood circulation.

#### **Side Bending**

- Gentle lateral trunk bending

**Benefit:** Enhances flexibility of spinal muscles and intercostal muscles.

**Hip Twisting (Chair Support)**

- Seated twisting movement

**Benefit:** Improves spinal rotation and reduces lower back stiffness.

**Finger & Wrist Exercises**

- Open-close fingers
- Wrist rotation

**Benefit:** Improves joint lubrication and reduces stiffness (useful in arthritis).

**Forward & Backward Bending**

- Gentle trunk flexion and extension

**Benefit:** Strengthens back muscles and improves posture.

**Leg Raising (90° Both Legs)**

- Supine position
- Raise both legs to 90 degrees

**Benefit:** Strengthens abdominal and thigh muscles.

**Pavanamuktasana**

- Knee to chest posture

**Benefit:** Relieves lower back tension and improves digestion.

**Setubandhasana**

- Hip raise and hold

**Benefit:** Strengthens gluteal and lumbar muscles.

**Lumbar Stretching**

- Gentle lower back stretch

**Benefit:** Reduces stiffness and improves spinal flexibility.

**Side Leg Raising**

- Raise leg sideways in supine or standing position

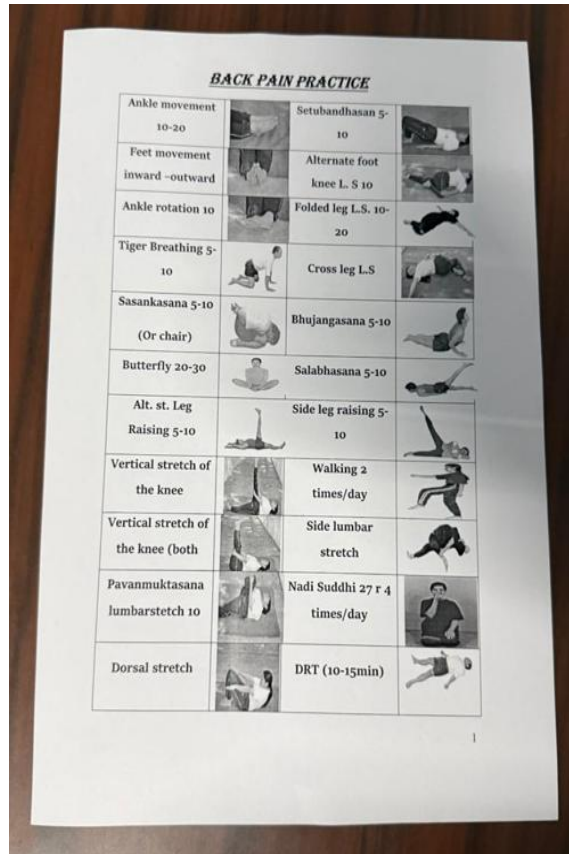

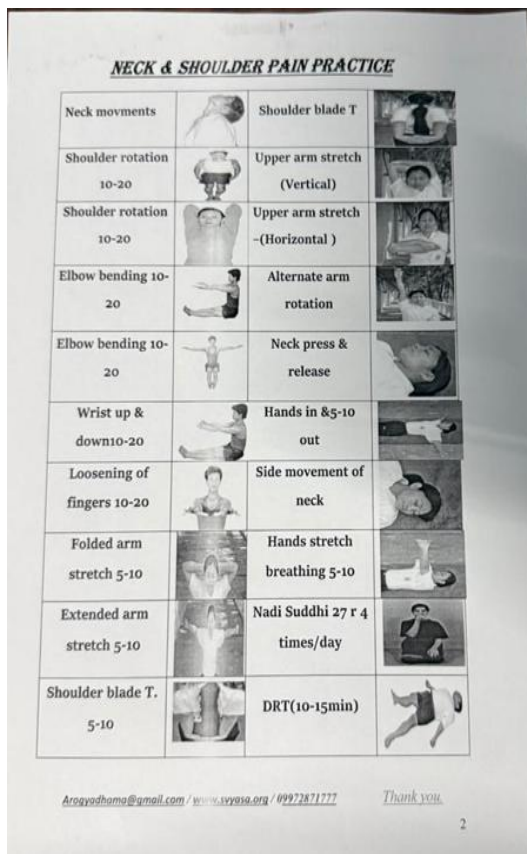

**Benefit:** Strengthens hip abductors and improves stability.

**Therapeutic Importance**

This special technique session was designed for:

- Spinal disorders
- Knee pain
- Arthritis
- Postural correction
- Muscle strengthening

The combination of stretching, strengthening, and controlled movements helped in gradual rehabilitation and improved functional mobility.

**Time: 07:00AM to 08:30AM**

## Spiritual Visit – Shivaratri Celebration

**Occasion:** Mahashivaratri

**Location:** Shiva Temple

As part of the Shivaratri celebrations, we visited the Shiva Temple during the early morning hours. The session included participation in **Rudra Homa**, which is a sacred Vedic ritual dedicated to Lord Shiva. The chanting of Vedic mantras created a spiritually uplifting and serene atmosphere.

During the visit, we had the opportunity to meet and receive blessings from:

- **Guruji Dr. H.R. Nagendra**
- **Dr. Nagaratna**
- **Dr. Kambhampati Subramanyam Sir**

We also took the blessings of Lord Shiva and participated in devotional activities associated with the festival.

This spiritual exposure reinforced the understanding that yoga is not limited to physical practice but also includes devotion, discipline, and inner purification. The experience enhanced spiritual awareness, collective harmony, and emotional positivity among participants.

## 09:00AM to 10:00AM Parameters

### Case Study

### Participant Details

| Particular        | Details                    |
|-------------------|----------------------------|
| Name              | *****                      |
| Age / Gender      | 65 Years / Female          |
| Occupation        | Homemaker                  |
| Date of Admission | 03/02/2026                 |
| Date of Discharge | 13/02/2026                 |
| Duration of Stay  | 10 Days                    |
| Department        | Spine / Integrated Therapy |

### Chief Complaints

- Low back pain (L5 region) radiating to left leg – 5 years
- Right knee pain – 2 years
- Headache – 1 month
- Dizziness – 2 years
- Constipation – 2 years
- Recurrent piles – 2 years
- Known case of Hypertension – 3 months

### History of Present Illness

The patient presented with chronic low back pain radiating to the left lower limb, aggravated by prolonged standing and walking and relieved by rest. She also reported right knee pain, headache, dizziness, and constipation. She is a known hypertensive on medication. Investigations showed mild anemia and inflammatory markers were elevated.

### Diagnosis

- Hypertension
- Osteoarthritis (Right Knee)
- Lumbago with Radiculopathy
- Tension Headache
- Chronic Constipation

### Clinical Parameters

#### ◆ Vital Parameters

| Parameter        | On Admission | On Discharge | Interpretation                |
|------------------|--------------|--------------|-------------------------------|
| Pulse            | 80 bpm       | 84 bpm       | Within normal limits          |
| Blood Pressure   | 130/70 mmHg  | 124/70 mmHg  | Improved BP control           |
| Respiratory Rate | 20 cpm       | 14 cpm       | Improved breathing efficiency |

#### ◆ Anthropometric Parameters

| Parameter | Admission | Discharge | Change   |
|-----------|-----------|-----------|----------|
| Weight    | 92.5 kg   | 90 kg     | ↓ 2.5 kg |

| Parameter | Admission    | Discharge | Change           |
|-----------|--------------|-----------|------------------|
| BMI       | 37.5 (Obese) | 36.9      | Slight reduction |

#### Functional Parameters

| Parameter     | Admission | Discharge | Improvement            |
|---------------|-----------|-----------|------------------------|
| Sit & Reach   | 22 cm     | 31 cm     | ↑ 9 cm                 |
| Bhramari Time | 6 sec     | 8 sec     | Improved lung capacity |

#### Laboratory Parameters

| Test       | Value      | Interpretation               |
|------------|------------|------------------------------|
| Hemoglobin | 9 gm/dL    | Mild anemia                  |
| ESR        | 26 mm/hr   | Mild inflammation            |
| CRP        | 11.90 mg/L | Elevated inflammatory marker |

#### Symptom Severity Table

| Complaint     | Before Therapy  | After Therapy | Status   |
|---------------|-----------------|---------------|----------|
| Low Back Pain | Moderate–Severe | Mild          | Reduced  |
| Knee Pain     | Moderate        | Mild          | Reduced  |
| Headache      | Daily           | Occasional    | Improved |
| Constipation  | Present         | Relieved      | Improved |
| Sleep         | Disturbed       | Sound         | Improved |

#### Integrated Approach of Yoga Therapy (IAYT)

##### ◆ Annamaya Kosha (Physical Level)

- Joint loosening practices
- Special techniques for spine & knee
- Setubandhasana
- Pavanamuktasana
- Lumbar stretching
- Leg strengthening practices

##### ◆ Pranamaya Kosha (Energy Level)

- Abdominal breathing
- Nadi Shuddhi
- Bhramari
- Cooling pranayama

##### ◆ Manomaya Kosha (Mental Level)

- MSRT
- Om chanting
- Meditation

##### ◆ Vijñanamaya Kosha (Intellectual Level)

- Yogic counseling

- Lifestyle awareness
- Gita sloka teaching
- ◆ **Anandamaya Kosha (Bliss Level)**
  - Devotional chanting
  - Temple visit (Shivaratri)
  - Rudra Homa participation
  - Seva activities

### **Naturopathy Management**

- Mud pack (abdomen & lower back)
- Moist heat therapy
- Enema (for constipation)
- Walking therapy (35 minutes daily)
- Detox diet

### **Physiotherapy**

- IFT therapy (Lower back)
- Myofascial release
- Hamstring & piriformis stretching
- Strengthening exercises

### **Ayurveda Therapy**

- Abhyanga (Lower back)
- Kati Basti
- Potali massage
- Head massage

### **Acupuncture Therapy**

Points used:

- UB23
- UB25
- GB30
- UB57
- DU20
- ST36
- LI4

Purpose: Pain reduction & energy balancing.

### **Diet Therapy**

#### **Morning:**

- Methi water
- Ash gourd juice
- Wheatgrass juice

#### **Breakfast:**

- Millet khichdi
- Raw vegetable salad

#### **Lunch:**

- Brown rice / Chapati

- Vegetable curry
- Sprouts

**Evening:**

- Vegetable soup

**Dinner:**

- Light khichdi / Salad

**Dietary Advice:**

- Avoid refined flour
- Avoid fried & junk food
- Anti-inflammatory diet recommended

**Medication**

- Telmisartan
- Olser H
- Avipattikara Churna
- Dhanvantara Vati
- Anuloma DS

**Meditation Summary**

- Regular Om chanting improved breath control
- MSRT reduced mental stress
- Improved sleep quality
- Increased emotional stability
- Enhanced relaxation response

**Outcome & Condition at Discharge**

- Back pain significantly reduced
- Knee pain reduced
- Flexibility improved
- Weight reduced
- BP stabilized
- Bowel regular
- Sleep improved
- Overall well-being improved

Patient discharged in stable condition and advised to continue yoga, diet regulation, and follow-up.

**10:30AM to 12:00PM Visit**

**Visit to Guruji Dr. H.R. Nagendra – Board Room Interaction**

**Session:** Post-Breakfast Academic Visit

**Venue:** SVYASA Board Room

After breakfast, we visited the Board Room to learn about the journey, vision, and contributions of **Guruji Dr. H.R. Nagendra** and the establishment of SVYASA.

**Interaction Highlights**

During the session, we were introduced to:

- The early vision of integrating ancient yogic wisdom with modern scientific research.

- The transformation of yoga from a traditional practice into a structured academic discipline.
- The challenges faced during the initial years of institutional development.

### **Establishment of SVYASA**

We learned that SVYASA was established with the objective of:

- Promoting yoga as a scientific discipline.
- Conducting evidence-based research in yoga therapy.
- Offering structured academic programs (B.Sc., M.Sc., Ph.D.).
- Integrating yoga with healthcare and education.

Through dedicated life workers and research initiatives, yoga gained credibility in clinical management of lifestyle disorders such as asthma, diabetes, hypertension, and arthritis. The institution later received recognition as a **Deemed-to-be University**, marking a major milestone in the academic history of yoga.

### **Key Learning from the Visit**

- Vision and dedication are essential for institutional growth.
- Yoga must combine philosophy, practice, and research.
- Scientific validation strengthens traditional knowledge.
- Commitment to service (Seva) is central to the yogic path.

### **Conclusion**

The visit to the Board Room provided deeper insight into the leadership, vision, and perseverance behind SVYASA's establishment. It strengthened our understanding that yoga is not only a spiritual science but also an academic and therapeutic discipline with global recognition.

### **12:00PM to 01:00PM Special Technique**

Repeated morning Special techniques

Nex Session was concluded with Lunch and Rest

### **2:30PM to 3:50PM MSRT and Pranayama**

The session was concluded with MSRT (Mind Sound Resonance Technique) followed by Pranayama practices to promote deep relaxation and improve breathing efficiency

### **4:00PM to 5:00PM Special Tecnuiques**

**Objective:** To improve lower limb mobility, strengthen knee and hip joints, enhance spinal flexibility, and reduce stiffness.

#### **Practices Performed**

##### ◆ **Toe Movements**

- Toes up and down (sitting position)

**Benefit:** Improves circulation and reduces stiffness in foot joints.

##### ◆ **Ankle Movements**

- Ankle up and down

- Alternate stretching
- Ankle twisting
- Ankle rotation

**Benefit:** Improves ankle flexibility and reduces joint stiffness.

◆ **Tiger Breathing (Marjari Swasa)**

- Inhale: arch back
- Exhale: round spine

**Benefit:** Improves spinal flexibility and reduces back stiffness.

◆ **Leg Raising & Rotation**

- Single leg raising
- Both legs raising
- Leg rotation

**Benefit:** Strengthens thigh and abdominal muscles.

◆ **Knee Up & Raising (Single & Both Legs)**

- Knee bending and lifting

**Benefit:** Strengthens quadriceps and improves knee stability.

◆ **Side Leg Raising**

- Raise leg sideways while lying down

**Benefit:** Strengthens hip abductors and improves balance.

◆ **Side Butterfly (Lying Position)**

- Side-lying leg movement similar to butterfly

**Benefit:** Improves hip joint mobility.

◆ **Side Twisting of Legs**

(Similar to Jathara Parivartanasana)

**Benefit:** Improves spinal rotation and relieves lower back stiffness.

◆ **Hip Rotation**

- Fold both legs
- Hold knee cap
- Rotate hip joint

**Benefit:** Enhances hip flexibility and joint lubrication.

◆ **Full Butterfly (Supine Position)**

- Lie down and move both legs in butterfly motion

**Benefit:** Improves pelvic flexibility.

◆ **Pavanamuktasana**

- One leg at a time

**Benefit:** Relieves lower back tension and improves digestion.

◆ **Dorsal Stretch**

- Fold legs
- Move forward and backward by lifting head

**Benefit:** Strengthens abdominal and back muscles.

◆ **Cycling (Single Leg & Both Legs)**

- Perform cycling motion alternately

**Benefit:** Improves coordination and strengthens lower limb muscles.

◆ **Setubandhasana**

- Hip raise and hold

**Benefit:** Strengthens lumbar and gluteal muscles.

◆ **Alternate Foot Knee Lumbar Stretch**

- Place hands straight on ground
- Move legs to opposite side

**Benefit:** Provides deep lumbar stretch and improves flexibility.

◆ **DRT (Deep Relaxation Technique)**

- Complete relaxation at end of session

**Benefit:** Reduces muscular tension and promotes mental calmness.

**Overall Therapeutic Effect**

- Improved joint mobility
- Reduced stiffness
- Strengthened lower limb muscles
- Enhanced spinal flexibility
- Reduced knee and back pain
- Promoted relaxation

he remaining sessions of the day were conducted as per the planned schedule. Practices included **Trataka**, **Cyclic Meditation (CM)**, and **Bhajans**.

Trataka was performed to improve concentration and mental focus. Cyclic Meditation helped in achieving deep physical and mental relaxation. The day concluded with Bhajans, creating a devotional and peaceful atmosphere.

The sessions were completed as scheduled and the day ended with a sense of calmness and positivity.

~~~~~

Day 14 – E Section

Date: 16th February 2026

Section: E -Section

Specialty: SPINAL

Place: SVYASA Arogyadhama

The morning sessions on 16th February 2026 were conducted in the same manner as the sessions held on 15th February 2026. All practices, including Kriyas, Special Techniques, Asanas, Pranayama, and Relaxation practices, were repeated as per the established therapeutic schedule.

The continuation of the same structured routine ensured consistency in treatment, reinforcement of techniques, and gradual improvement in flexibility, strength, and overall stability.

09:00AM to 10:00AM Case Study

Participant Details

Particular	Details
Name	Shiv Devi
Age / Gender	66 years / Female

Particular	Details
Occupation	Homemaker
Date of Admission	22-01-2026
Date of Discharge	04-02-2026
Department	Spinal Disorders

Diagnosis

- GERD
- Lumbago with Sciatica
- Hypertension
- Cervical Spondylosis
- Tension Headache
- Sleep Maintenance Insomnia

Chief Complaints

- Neck pain radiating to right hand – 5 years
- Low back pain radiating to right leg – 5 years
- Numbness in hands & fingers – 5 years
- Disturbed sleep – 5 years
- Headache – 1 year
- Belching & bloating – 1 year
- Known case of Hypertension – 5 years

History of Present Illness

The participant presented with chronic cervical and lumbar pain radiating to upper and lower limbs for 5 years, associated with numbness. She reported sleep disturbance characterized by difficulty maintaining sleep. GERD symptoms (belching and bloating) increased over the last year. She has a history of hypertension with irregular medication intake.

Clinical Parameters

♦ Vital & Anthropometric Parameters

Parameter	Admission	Discharge	Change
Pulse (bpm)	80	82	Stable
Blood Pressure (mmHg)	100/60	110/64	Improved stability
Respiratory Rate (cpm)	18	19	Stable
Bhramari Time (sec)	10	10.6	Improved
Weight (kg)	53.8	53.1	↓ 0.7 kg
BMI (kg/m ²)	24.8	23.6	Improved
Height	150 cm	150 cm	—

♦ Functional Parameters

Parameter	Admission	Discharge	Improvement
Sit & Reach	20 cm	41 cm	↑ 21 cm

Parameter	Admission	Discharge	Improvement
Straight Leg Raising (Right)	75°	75°	Maintained
Straight Leg Raising (Left)	75°	75°	Maintained

Symptom Score

Parameter	Admission	Discharge
Symptom Score	5	4

Integrated Approach of Yoga Therapy (IAYT)

Annamaya Kosha

- Special techniques for spinal disorders
- Sukshma vyayama
- Yogasanas for cervical & lumbar spine

◆ Pranamaya Kosha

- Pranayama practices
- Breathing techniques

◆ Manomaya Kosha

- OM chanting
- Cyclic Meditation
- Mind Sound Resonance Technique

◆ Vijnanamaya Kosha

- Counseling
- Lifestyle modification
- Yama & Niyama awareness

◆ Anandamaya Kosha

- Selfless service
- Awareness of universal consciousness

Ayurveda Treatment

- Kati Basti
- Abhyanga (Back, legs, neck)
- Potali Sweda
- Sarvanga Abhyanga + Steam

Naturopathy Diet Plan

Early Morning:

- Methi water
- Ash gourd juice
- Wheat grass juice

Breakfast:

- Sprouted grams
- Oatmeal / Ragi ganji / Poha

Lunch:

- Brown rice / Chapati
- Vegetable curry

Snacks:

- Roasted chana
- Green tea

- Sprouts

Dinner:

- Vegetable salad / Soup / Khichdi

General Advice:

- Water intake: 2–3 litres/day
- Avoid junk & processed food
- Prefer herbal drinks

Home Remedies Suggested

- Mustard pack (pain relief)
- Turmeric paste application
- Anti-inflammatory diet (ginger, turmeric, garlic, tulsi, clove, cinnamon)

Medication on Discharge

Medicine	Dosage
Abhra Lauha	1-0-1
Trayodashanga Guggulu	1-0-1
Balausta	3 tsp (1 month)
Hingvashtaka Choorna	½ tsp with ghee + hot food

Condition at Discharge

- Clinically stable
- Pain reduced
- Sleep improved
- Mental relaxation achieved
- Improved spinal flexibility
- Improved digestion

Overall Outcome

- Significant improvement in flexibility (Sit & Reach increased)
- Stabilized blood pressure
- Reduced neck & back pain
- Improved bowel function
- Better sleep pattern
- Reduced stress levels

10:00AM to 11:00PM Lecture

Meditation (Dhyana) increases inner power.

When the mind is not balanced, power reduces.

If the mind is stable and balanced, inner energy becomes powerful.

Meditation gives strength and stability to the mind.

Eight Limbs of Yoga (Ashtanga Yoga)

There are 8 limbs:

1. **Yama**
2. **Niyama**
3. **Asana**
4. **Pranayama**
5. **Pratyahara**
6. **Dharana**

8. Samadhi

- The rest of the day's sessions were conducted as per the routine daily schedule. In the evening, a feedback session was held with Sri Karibasappa Sir, where everyone shared their experiences, learning, and reflections about their stay.

[illegible]

Day 15 – F Section

Date: 17th February 2026

Section: F -Section

Specialty: Metabolic

Place: SVYASA Arogyadhama

On the 15th day, 17th February 2026, it was the final day of our posting in F Section (Metabolic Department). The morning session was conducted with Om meditation and bhajans, creating a calm and devotional atmosphere. The practices helped in mental relaxation and spiritual upliftment. The session prepared everyone for the concluding activities of the internship posting in the metabolic department.

09:00AM to 10:00AM Case Study

Participant Details

Particular	Details
Name	Mr. Tulsi Ram Rathod
Age	71 years
Gender	Male
Occupation	Pracharak
Date of Admission	03/02/2026
Date of Discharge	09/02/2026
Diagnosis	Type 2 Diabetes Mellitus, Hypertension

Chief Complaints

- Irregular bowel movements since 6 months
- Disturbed sleep since 6 months
- Increased blood sugar levels since 12 years
- Hypertension since March 2025
- Type 2 Diabetes Mellitus since 2012
- Chronic Kidney Disease since April 2025

History of Present Illness

A 71-year-old male presented with irregular bowel movements and disturbed sleep for 6 months. He has a long-standing history of Type 2 Diabetes Mellitus (12 years) and Hypertension. In April 2025, he experienced fainting episodes and was later diagnosed with Chronic Kidney Disease. He has been on regular medication for diabetes and hypertension. For further integrated management, he was admitted to Arogyadhama.

Clinical Parameters

◆ Vital Parameters

Parameter	On Admission	On Discharge
Pulse (beats/min)	74	74
Blood Pressure (mmHg)	134/72	120/60
Respiratory Rate (/min)	20	20
Bhramari Time (sec)	19	16
Medication Score	08	06

Parameter	On Admission	On Discharge
Symptom Score	06	05

◆ **Anthropometric Parameters**

Parameter	On Admission	On Discharge
Weight (kg)	65.1	65.1
Height (cm)	173	173
BMI (kg/m ²)	21.8	21.8
HbA1c (%)	4.16	
FBS (mg/dl)	82	
PPBS (mg/dl)	113	

Yoga Therapy (IAYT – Integrated Approach)

Annamaya Kosha

- Special technique for Type 2 Diabetes Mellitus
- Surya Namaskara (2 rounds)
- Spinal twisting
- Side bending
- Janushirasana
- Ardha Baddhakonasana
- Bhujangasana
- Shavasana

◆ **Pranamaya Kosha**

- Nadishuddhi Pranayama
- Bhramari Pranayama
- Breathing practices

◆ **Manomaya Kosha**

- OM chanting
- Cyclic Meditation
- Mind Sound Resonance Technique (MSRT)

◆ **Vijnanamaya Kosha**

- Yogic counselling
- Lifestyle modification
- Study of spiritual texts

Naturopathy Management

- Cold abdominal pack
- Cold hip bath
- Sun bath
- Direct mud application to abdomen
- Gastro-hepatic pack

Ayurveda Treatment

- Takradhara
- Sarvanga Abhyanga + Swedana
- Matra Basti with Sukumara Ghrita (30 ml warm milk – 60 ml)

Diet Plan (Diabetic Diet)

Early Morning

- Coriander water / Triphala water / Methi water / Jeera water

Breakfast

- Sprouted green grams
- Ragi ganji
- Broken wheat upma
- Millet khichdi
- Idli with chutney & sambar

Mid-Morning

- Ash gourd / Bottle gourd / Bitter gourd juice

Lunch

- Jowar roti / Ragi ball / Wheat chapatti
- Brown rice / Red rice
- Vegetable sabzi
- Dal / Rasam / Sambar
- Buttermilk
- Vegetable salad

Snacks

- Green tea / Herbal decoction
- Sprouts / Channa

Dinner

- Light millet-based meal
- Vegetables
- Buttermilk

Foods to Avoid

- Mango, banana, jackfruit
- Potatoes, sweet potatoes
- Processed food
- Sugar & sugar products
- Excess oil

Medication

Medication	Dosage
Ecosprin AV 75/20	0-0-1
Levipil 500 mg	1-0-1
Oxra 10 mg	0-0-1
Cortel A 40/50	1-0-0
Sobisis Forte	1-2-1

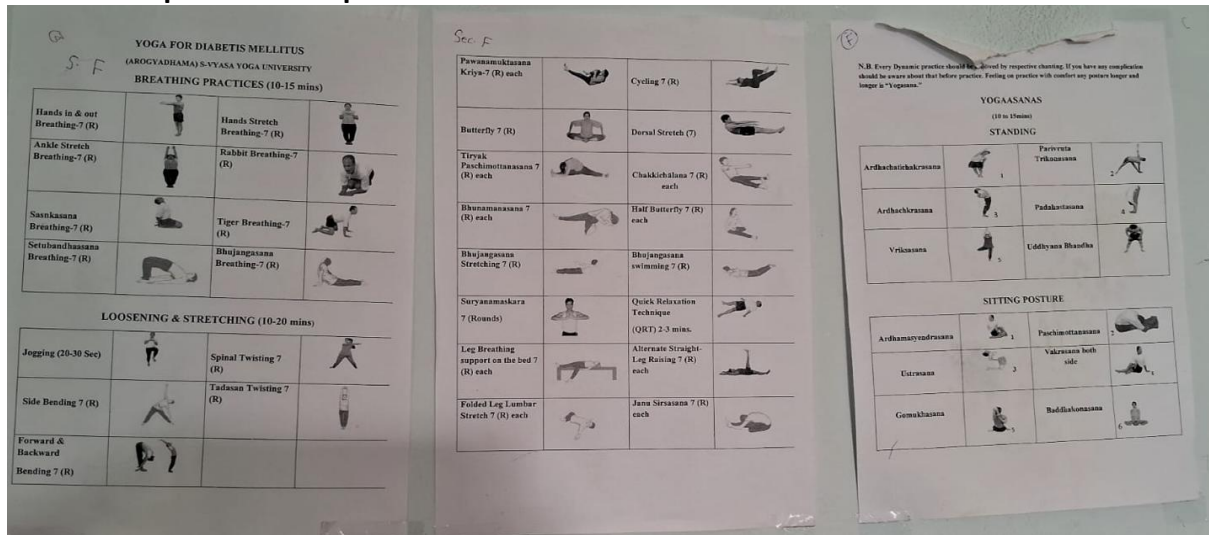

Condition at Discharge

- Clinically stable
- Blood pressure improved
- Symptom score reduced
- Mental relaxation achieved
- Overall health improved
- Advised to continue yoga practices daily

Follow-up Advice

- Continue special technique for DM-2
- Regular pranayama
- 30–45 minutes walking daily
- 3–4 liters water per day
- Follow diabetic diet strictly
- Follow-up after 3 months

Metabolic Special Techniques

On the final day, we collected our internship certificates and successfully completed our posting. We expressed our sincere gratitude to our primary leader **Smt.Ambika** and backup leader **Mr. Basavaraj** for their continuous guidance, coordination, and support throughout the internship. Their encouragement and leadership greatly contributed to our learning experience and smooth completion of the program.

~~~~~

## Great Personalities of SVYASA

### **Lakshmi Amma – A Foundational Pillar of S-VYASA**

Lakshmi – Lakshmi Aunty – Atchi

Lakshmi Amma, often referred to as *Lakshmi of S-VYASA*, was a key figure in the establishment of **Prashanti Kutiram**, the headquarters of **S-VYASA University, Bengaluru**. She played a vital role in shaping the spiritual and philosophical foundation of the institution.

Lakshmi Amma was known for her extraordinary personality, blending ancient Vedantic wisdom with modern scientific thinking. Her vision and inner strength significantly contributed to the growth of S-VYASA as a center for integrated yoga education and research.

#### **Key Contributions:**

- **Foundational Role:** Instrumental in the establishment and development of Prashanti Kutiram campus.
- **Philosophical Influence:** Guided the integration of spirituality with scientific research in yoga.
- **Legacy:** Her life and contributions are documented in the book *“An Amazing Personality – Lakshmi of S-VYASA.”*
- **Commemoration:** The **“Yoga Lakshmi Puraskara”** award is presented in her memory to honor excellence in the integration of Ayurveda and Yoga.

Lakshmi Amma’s grace, wisdom, and dedication continue to inspire students, faculty, and yoga practitioners. Her legacy remains deeply rooted in the values and mission of S-VYASA.

#### **Dr. H. R. Nagendra (Sri Nagendra Guruji)**

Dr. H. R. Nagendra, fondly known as Sri Nagendra Guruji, is a renowned yoga guru, mechanical engineer, and the Founder-Chancellor of **Swami Vivekananda Yoga Anusandhana Samsthana (S-VYASA) University, Bengaluru**. He is widely recognized for integrating modern scientific research with traditional yogic wisdom.

He is also the visionary behind **Arogyadhama**, a 250-bed holistic health center at Prashanti Kutiram, dedicated to yoga therapy for lifestyle and non-communicable diseases (NCDs).

## Background

- Born in 1943.
- Completed PhD in Mechanical Engineering from the Indian Institute of Science (IISc), Bengaluru (1968).
- Worked at the University of British Columbia, NASA Marshall Space Flight Centre, and Harvard University.

In 1975, he joined Vivekananda Kendra and shifted his focus toward scientific validation of yoga.

## Role at S-VYASA

- Driving force behind the S-VYASA movement.
- First Vice-Chancellor in 2002 when S-VYASA received Deemed-to-be University status.
- Currently serves as Chancellor.
- Promotes yoga therapy, research, and higher education globally.

## Major Contributions

- Developed the **Integrated Approach of Yoga Therapy (IAYT)** based on the Panchakosha model.
- Originator of **Cyclic Meditation**, inspired by the Mandukya Upanishad.
- Authored over 100 research papers and 35 books on yoga.
- Promoted scientific research in yoga for diabetes, asthma, hypertension, cancer, and stress disorders.
- Played a significant role in the global promotion of yoga, including contribution toward the International Day of Yoga.

## Recognition

- Awarded **Padma Shri** in 2016.
- Personal yoga consultant to Prime Minister Narendra Modi.
- Internationally recognized for bridging modern science and ancient yoga.

## Vision

Dr. Nagendra's vision is to establish yoga as a scientific, therapeutic, and educational discipline. His work emphasizes holistic healing through integration of body, mind, intellect, and spirit, especially in managing non-communicable diseases.

## Dr. R. Nagarathna

Dr. R. Nagarathna is a pioneering and internationally recognized expert in Yoga Therapy and serves as the Chief Medical Director of **Arogyadhama**, the holistic healthcare center of S-

**VYASA University, Bengaluru.** She is widely respected for integrating modern medical science with evidence-based yoga therapy.

### **Medical Background**

- MBBS – Bangalore Medical College
- MD (Internal Medicine) – Mysore Medical College
- MRCP / FRCP – Edinburgh, United Kingdom

With a strong background in modern medicine, she transitioned into yoga therapy research and became a key figure in establishing yoga as a validated therapeutic science.

### **Role at S-VYASA**

- Chief Medical Director of Arogyadhama
- Former Dean, Division of Yoga and Life Sciences
- Leader in clinical research and therapeutic protocol development

### **Major Contributions**

- Developed safe, structured, and evidence-based yoga protocols for various medical conditions.
- Published over 80 research papers and authored 11 books on yoga therapy.
- Promoted yoga as a primary and integrative treatment method.
- Conducted extensive research in stress management, psychosomatic disorders, cancer rehabilitation, diabetes, asthma, and hypertension.

### **Awards & Recognition**

- Rajyotsava Award (2019)
- Patanjali Award (2000)
- Numerous national and international recognitions for contributions to yoga therapy

### **Vision & Impact**

Dr. Nagarathna has been instrumental in promoting yoga not merely as a lifestyle practice but as a rigorous, scientifically validated therapeutic system. Her work has significantly contributed to bridging modern medicine with traditional yogic science, especially in managing non-communicable and stress-related disorders.

### **Memorable Experiences and Learning Outcomes During Internship**

The internship gave us many memorable moments and valuable experiences. We had the opportunity to meet experienced **yoga therapists** and learn from their practical knowledge. As part of our MSc Yoga course, we gained real clinical exposure and understood the functioning of different departments. The peaceful environment, disciplined routine, and healthy food added to the overall learning experience. We also built good rapport with new university colleagues, making the journey both educational and memorable.
